

# HEATHKIT MODEL AR-2 COMMUNICATIONS RECEIVER

## SPECIFICATIONS

|                         |                                                                                                                                                                                                    |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Frequency Range.....    | 550 kc to 35 mc on four bands                                                                                                                                                                      |
| Tube Complement.....    | 1 - 12BE6 Oscillator and Mixer<br>1 - 12BA6 IF Amplifier<br>1 - 12AV6 Second Detector and First Audio Amplifier<br>1 - 12A6 Beam Power Output<br>1 - 12BA6 BFO Tube<br>1 - 5Y3 Full Wave Rectifier |
| Power Requirements..... | 105-125 volts AC 50/60 cycles 45 watts                                                                                                                                                             |
| Dimensions.....         | 11 1/2" wide x 5 3/4" high x 6 3/4" deep                                                                                                                                                           |
| Shipping Weight.....    | 12 lbs.                                                                                                                                                                                            |

## FEATURES

Band Spread Tuning  
Phone - Standby - CW  
Headphone Jack

Noise Limiter  
RF Gain Control  
Ham Band Identifications
