AMATOL:

Description:

Amatol is a high explosive, white to buff in color.It is a mixture of ammonium nitrate and TNT, with a relative effectiveness slightly higher than that of TNT alone. Common compositions vary from 80% ammonium nitrate and 20% TNT to 40% ammonium nitrate and 60% TNT. Amatol is used as the main bursting charge in artillery shells and bombs. Amatol absorbs moisture and can form dangerous compounds with copper and brass. Therefore, it should not be housed in containers of such metals.
