Acetylene Balloon Bomb

Ingredients:

- (1) For a small bomb: a small plastic bag. For something bigger: a green, plastic garbage bag.
- (2) Some "Fun-Snaps". A dozen should be more than enough.
- (3) Some garbage bag twisties. String would also do.
- (4) A few rocks. Not too heavy, but depends on size of bomb and desired velocity of balloon/bomb.
- (5) PRIME INGREDIENT: Acetylene. This is what is used in acetylene torches.

Acetylene is a fairly dangerous substance. It is unstable upon contact with oxygen (air). For this reason, and for your safety, I recommend you keep all of the acetylene AWAY from any source of oxygen. This means don't let it get in touch with air.

Construction:

- (1> Fill up a bathtub with cold water. Make it very full.
- (2> Now put you garbage bag in the water and fill it with water. Make sure ALL air/oxygen is out of the bag before proceeding.
- (3> Now take your acetylene source (I used it straight from the torch, and I recommend this way also.), and fill the bag up with acetylene.
- (4> Now, being careful with the acetylene, take the bag out of the tub and tie the opening shut with the twistie or string. Let the balloon dry off now. (Put it in a safe place.)
- (5> Okay. Now that it is dry and filled with acetylene, open it up and drop a few rocks in there. Also add some Fun-Snaps. The rocks will carry the balloon down, and the Fun-Snaps will spark upon impact, thus setting off the highly inflammable acetylene.
- (6> Now put the twisty or string back on very tightly. You now have a delicate but powerful balloon bomb.
