HTH/Brake Fluid Incendiary

MATERIALS:

Name

Sources

Granular Calcium Hypochlorite (70% HTH swimming pool purifier) Brake Fluid Swimming pool supply house or bleaching agent Auto Parts Store or Gas Station

Two Cans of *EQUAL* size Tape Nail or Small Drill

PROCEDURE:

- 1) Take your two cans and remove the contents, and then wash them out thoroughly. Now drill or puncture a small hole in the bottom center of one of the cans.
- 2) Now drill or puncture a series of small holes evenly spaced in the side of the other can, and cover them with tape.
- 3) Now tape the top can (the can with one hole) on top of the other can (the one with a lot of holes taped over)
- 4) Now place this set up in the center of a pile of Calcium Hypochlorite. Now Depending on the delay time required remove the tape from over the appropriate number of holes.
- 5) To start the delay just add brake fluid to the top can and let it start to drip down.
