PLASTIC EXPLOSIVE

Method A:

Materials:

Gasoline - 1 part Oil - 1 half part Styrofoam - 1 part

- 1) Melt Styrofoam (remember NEVER at ANY time let the mixture get too hot)! NOTE: Do NOT inhale the fumes they are deadly!
- 2) Let cool to a thick viscosity.
- 3) Mix 3 ingredients together in the following order: Styrofoam, oil, & gas.
- 4) Mix in a deep pot Keep mixture away from any type of fire! Do this step with extreme caution!
- 5) Let the mixture cool to a little bit warmer that room temperature, which is around 88 degrees Fahrenheit.
- 6) Mold the mixture how you want (different shapes will make it more or less lethal).

Method # 2:

Materials:

20ml gasoline 5-10 plastic bags 10ml oil or starter fluid 50ml beaker or glass bowl gunpowder, guncotton or acetone hydrogen

Procedure:

Pour gas in glass container and add bags to gas and dissolve until fairly thick viscosity like melted marshmallow (actually, marshmallows would probably work just as well or better than plastic bags!) and add oil. Add bags again until very thick. Add the guncotton and mix well. Keep on adding strips of plastic until no more will dissolve and then pour in a mold.

NOTE: It would a good idea to heat this stuff with a double boiler.
