Legal Notice for Harmonized Standard Jointly Developed by ASME and CSA

Intellectual property rights and ownership

As between The American Society of Mechanical Engineers ("ASME") and Canadian Standards Association ("CSA") (collectively "ASME and CSA") and the users of this document (whether it be in printed or electronic form), ASME and CSA are the joint owners of all works contained herein that are protected by copyright, all trade-marks (except as otherwise noted to the contrary), and all inventions and trade secrets that may be contained in this document, whether or not such inventions and trade secrets are protected by patents and applications for patents. The unauthorized use, modification, copying, or disclosure of this document may violate laws that protect the intellectual property of ASME and CSA and may give rise to a right in ASME and CSA to seek legal redress for such use, modification, copying, or disclosure. ASME and CSA reserve all intellectual property rights in this document.

Disclaimer and exclusion of liability

This document is provided without any representations, warranties, or conditions of any kind, express or implied, including, without limitation, implied warranties or conditions concerning this document's fitness for a particular purpose or use, its merchantability, or its non-infringement of any third party's intellectual property rights. ASME and CSA do not warrant the accuracy, completeness, or currency of any of the information published in this document. ASME and CSA make no representations or warranties regarding this document's compliance with any applicable statute, rule, or regulation.

IN NO EVENT SHALL ASME AND CSA, THEIR RESPECTIVE VOLUNTEERS, MEMBERS, SUBSIDIARIES, OR AFFILIATED COMPANIES, OR THEIR EMPLOYEES, DIRECTORS, OR OFFICERS, BE LIABLE FOR ANY DIRECT, INDIRECT, OR INCIDENTAL DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES, HOWSOEVER CAUSED, INCLUDING BUT NOT LIMITED TO SPECIAL OR CONSEQUENTIAL DAMAGES, LOST REVENUE, BUSINESS INTERRUPTION, LOST OR DAMAGED DATA, OR ANY OTHER COMMERCIAL OR ECONOMIC LOSS, WHETHER BASED IN CONTRACT, TORT (INCLUDING NEGLIGENCE), OR ANY OTHER THEORY OF LIABILITY, ARISING OUT OF OR RESULTING FROM ACCESS TO OR POSSESSION OR USE OF THIS DOCUMENT, EVEN IF ASME OR CSA HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, INJURY, LOSS, COSTS, OR EXPENSES.

In publishing and making this document available, ASME and CSA are not undertaking to render professional or other services for or on behalf of any person or entity or to perform any duty owed by any person or entity to another person or entity. The information in this document is directed to those who have the appropriate degree of experience to use and apply its contents, and ASME and CSA accept no responsibility whatsoever arising in any way from any and all use of or reliance on the information contained in this document.

ASME and CSA have no power, nor do they undertake, to enforce compliance with the contents of the standards or other documents they jointly publish.

Authorized use of this document

This document is being provided by ASME and CSA for informational and non-commercial use only. The user of this document is authorized to do only the following:

If this document is in electronic form:

- load this document onto a computer for the sole purpose of reviewing it;
- search and browse this document; and
- print this document if it is in PDF format.

Limited copies of this document in print or paper form may be distributed only to persons who are authorized by ASME and CSA to have such copies, and only if this Legal Notice appears on each such copy.

In addition, users may not and may not permit others to

- alter this document in any way or remove this Legal Notice from the attached standard;
- sell this document without authorization from ASME and CSA; or
- make an electronic copy of this document.

If you do not agree with any of the terms and conditions contained in this Legal Notice, you may not load or use this document or make any copies of the contents hereof, and if you do make such copies, you are required to destroy them immediately. Use of this document constitutes your acceptance of the terms and conditions of this Legal Notice.

Preface

This is the first edition of ASME A112.18.6/CSA B125.6, *Flexible water connectors*.

This Standard replaces ASME A112.18.6-2003, *Flexible Water Connectors*.

This Standard is considered suitable for use for conformity assessment within the stated scope of the Standard.

This Standard was prepared by the ASME/CSA Joint Harmonization Task Group on Plumbing Fittings, under the jurisdiction of ASME Standards Committee on Plumbing Materials and Equipment and the CSA Technical Committee on Plumbing Fittings. The CSA Technical Committee operates under the jurisdiction of the CSA Strategic Steering Committee on Water Management Products, Materials, and Systems. This Standard has been formally approved by the ASME Standards Committee and the CSA Technical Committee. This Standard was approved as an American National Standard by the American National Standards Institute on July 10, 2009, and will be submitted to the Standards Council of Canada for approval as a National Standard of Canada.

July 2009

ASME Notes:

- (1) *This standard was developed under procedures accredited as meeting the criteria for American National Standards and it is an American National Standard. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed Standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.*
- (2) *ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.*
- (3) *ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.*
- (4) *Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this standard.*
- (5) *ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.*
- (6) *ASME issues written replies to inquiries concerning interpretation of technical aspects of this Standard. All inquiries regarding this Standard, including requests for interpretations, should be addressed to:*
Secretary, A112 Standards Committee
The American Society of Mechanical Engineers
Three Park Avenue
New York, NY 10016-5990

A request for interpretation should be clear and unambiguous. The request should

- cite the applicable edition of the Standard for which the interpretation is being requested.*
- phrase the question as a request for an interpretation of a specific requirement suitable for general understanding and use, not as a request for an approval of a proprietary design or situation. The inquirer may also include any plans or drawings, which are necessary to explain the question; however, they should not contain proprietary names or information.*

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME Committee.

Interpretations are published on the ASME Web site under the Committee Pages at <http://cstools.asme.org/> as they are issued.

CSA Notes:

- (1) *Use of the singular does not exclude the plural (and vice versa) when the sense allows.*
- (2) *Although the intended primary application of this Standard is stated in its Scope, it is important to note that it remains the responsibility of the users of the Standard to judge its suitability for their particular purpose.*

- (3) *This publication was developed by consensus, which is defined by CSA Policy governing standardization — Code of good practice for standardization as “substantial agreement. Consensus implies much more than a simple majority, but not necessarily unanimity”. It is consistent with this definition that a member may be included in the Technical Committee list and yet not be in full agreement with all Clauses of this publication.*
- (4) *CSA Standards are subject to periodic review, and suggestions for their improvement will be referred to the appropriate committee.*
- (5) *All enquiries regarding this Standard, including requests for interpretation, should be addressed to Canadian Standards Association, 5060 Spectrum Way, Suite 100, Mississauga, Ontario, Canada L4W 5N6.*
Requests for interpretation should
(a) define the problem, making reference to the specific clause, and, where appropriate, include an illustrative sketch;
(b) provide an explanation of circumstances surrounding the actual field condition; and
(c) be phrased where possible to permit a specific “yes” or “no” answer.
Committee interpretations are processed in accordance with the CSA Directives and guidelines governing standardization and are published in CSA’s periodical Info Update, which is available on the CSA Web site at www.csa.ca.
- (6) *Attention is drawn to the possibility that some of the elements of this Standard may be the subject of patent rights. CSA is not to be held responsible for identifying any or all such patent rights. Users of this Standard are expressly advised that determination of the validity of any such patent rights is entirely their own responsibility.*

ASME A112.18.6-2009/CSA B125.6-09

Flexible water connectors

1 Scope

1.1

This Standard covers flexible water connectors for use in water supply systems under

- (a) continuous pressure in accessible locations; and
- (b) intermittent pressure in recreational vehicles only.

1.2

In this Standard, “shall” is used to express a requirement, i.e., a provision that the user is obliged to satisfy in order to comply with the standard; “should” is used to express a recommendation or that which is advised but not required; “may” is used to express an option or that which is permissible within the limits of the standard; and “can” is used to express possibility or capability. Notes accompanying clauses do not include requirements or alternative requirements; the purpose of a note accompanying a clause is to separate from the text explanatory or informative material. Notes to tables and figures are considered part of the table or figure and may be written as requirements. Annexes are designated normative (mandatory) or informative (non-mandatory) to define their application.

1.3

SI units are the units of record in Canada. In this Standard, the yard/pound units are shown in parentheses. The values stated in each measurement system are equivalent in application; however, each system is to be used independently. Combining values from the two measurement systems can result in non-conformance with this Standard.

All references to gallons are to U.S. gallons.

For information on the conversion criteria used in this Standard, see [Annex B](#).

2 Reference publications

This Standard refers to the following publications, and where such reference is made, it shall be to the edition listed below, including all amendments published thereto.

ASME (The American Society of Mechanical Engineers)

A112.19.5-2005

Drinking Water System Components — Health Effects

SAE International (Society of Automotive Engineers)

J512 (1997)

Automotive Tube Fittings

3 Definitions

The following definitions apply in this Standard:

Accessible — readily serviceable or readily replaceable.

Flexible water connector (flexible connector) — a non-rigid tube or hose with end connections used for connecting a water supply to a fixture, fitting, or appliance.

Push-fit fitting — a mechanical fitting that joins pipes or tubes and achieves a seal by pushing the mating pipe or tube into the fitting by hand. The fitting can be removable or non-removable.

4 General requirements

Note: *The provisions of this Standard are not intended to prevent the use of alternative materials or manufacturing methods for products that meet the intent of this Standard.*

4.1 Materials

Note: [Annex A](#) provides information on the effects of aqueous chloramine on elastomers.

4.1.1

Flexible connectors used for delivery of drinking water shall comply with the applicable requirements of NSF/ANSI 61.

4.1.2

Solder and fluxes shall not exceed 0.2% lead content by mass. Metal alloys shall not exceed 3.7% lead content by mass.

4.1.3

Copper alloy components shall contain at least 56% copper.

4.1.4

Stainless steel components in contact with water shall be made from 300 or 400 series stainless steel. Ferrous steel parts not in contact with water shall be protected by a coating that complies with [Clause 4.2](#).

4.2 Coatings

Coatings shall be tested in accordance with and meet the requirements of Clause 5.2 of ASME A112.18.1/CAN/CSA-B125.1.

4.3 Connections

4.3.1 General

Connections shall comply with the performance requirements of this Standard (see [Clause 5](#)) and, as applicable, [Clauses 4.3.2](#) to [4.3.7](#).

4.3.2 Pipe threads

NPT or NPTF tapered pipe threads shall comply with the L1 gauge requirements of ASME B1.20.1 or ASME B1.20.3 using a tolerance of ± 1 turn. Other pipe threads shall comply with ASME B1.20.1.

4.3.3 Hose end threads

Hose end threads shall

- (a) be compatible with hose end threads that comply with ASME B1.20.7; and
- (b) comply with the requirements of this Standard.

4.3.4 Fill valve threads

Fill valve threads shall comply with ASME A112.19.5, except that fill valve nut threads may be Class 2B.

4.3.5 Solder connections

The length and diameter of the joint section of a solder joint end for connection to copper tube or copper tube fittings shall be as specified in ASME B16.18 or ASME B16.22. Flexible connectors for soldering to the water distribution system shall not contain soldered assemblies.

4.3.6 Flare connections

Flare connections shall

- (a) be compatible with flare connections that comply with ASME B16.26; and
- (b) comply with the requirements of this Standard.

4.3.7 Compression connections

Compression connections shall

- (a) be compatible with compression connections that comply with SAE J512; and
- (b) comply with the requirements of this Standard.

4.3.8 Push-fit fittings

Connections achieved by push-fit fittings shall comply with ASSE 1061 and the applicable requirements of this Standard.

4.3.9 Alternate connections

Alternate connections shall meet the performance requirements of this Standard.

4.4 Water heater flexible connectors

Metallic water heater flexible connectors shall be made of

- (a) 300 series stainless steel with a minimum wall thickness of 0.25 mm (0.010 in); or
- (b) copper with a minimum wall thickness of 0.7 mm (0.026 in).

4.5 Working pressure

Flexible connectors shall function at

- (a) supply pressures between 140 and 860 kPa (20 and 125 psi); and
- (b) intermittent impulse pressures not exceeding 1240 kPa (180 psi).

4.6 Working temperature

Flexible connectors shall

- (a) function at supply temperatures between 4 and 71 °C (40 and 160°F); and
- (b) withstand water at 82 °C (180°F) for 0.5 h without failure of the pressure envelope.

5 Performance requirements and test methods

5.1 General

5.1.1

A specimen representing each combination of nominal diameter, connection type, and material shall be tested.

5.1.2

Separate specimens shall be used for each test specified in this Standard.

5.2 Intermittent impulse pressure test

5.2.1 Performance

Flexible connectors shall withstand intermittent impulse pressures not exceeding 1280 kPa (185 psi) when tested in accordance with [Clause 5.2.2](#). In addition, on completion of such testing, the flexible connectors shall not leak when tested in accordance with the blocked outlet procedure specified in Clause 5.3.1.3 of ASME A112.18.1/CAN/CSA-B125.1.

5.2.2 Procedure

The intermittent impulse pressure test shall be conducted as follows:

- (a) Supply water at 82 ± 3 °C (180 ± 5 °F) to the specimen in such a manner that the flowing pressure upstream of the specimen is a maximum of 517 kPa (75 psi) and the flow rate is 7.6 ± 1.9 L/min (2.0 ± 0.5 gpm).
- (b) For each cycle, stop the flow and increase the pressure from 517 kPa (75 psi) to 1240 ± 35 kPa (180 ± 5 psi).
- (c) Cycle the specimen for 100 000 cycles at a minimum of 7 cycles/min at the following rates:
 - (i) 3 ± 1 s at 517 kPa (75 psi) maximum; and
 - (ii) 3 ± 1 s at 1240 ± 35 kPa (180 ± 5 psi) maximum.

5.3 Burst pressure test

5.3.1 Performance

Flexible connectors shall not leak when subjected to the hydrostatic burst pressure test specified in [Clause 5.3.2](#).

5.3.2 Procedure

The burst pressure test shall be conducted as follows:

- (a) Fill the specimen with water.
- (b) Submerge the specimen in water at 82 ± 3 °C (180 ± 5 °F) for 30 min. Alternatively, if the medium is air, condition the specimen for 60 min at ambient laboratory conditions while flowing water at 82 ± 3 °C (180 ± 5 °F) through it.
- (c) Pressurize the specimen at 1724 ± 35 kPa (250 ± 5 psi).
- (d) Hold the specimen at the temperature and pressure specified in Items (b) and (c) for 30 min.
- (e) Remove the specimen from the water, if applicable.
- (f) Inspect the specimen for leaks while it is still being subjected to the test pressure.

5.4 Pressure drop test

5.4.1 Performance

The pressure drop across the specimen shall not exceed the applicable value specified in [Table 1](#) when it is tested in accordance with [Clause 5.4.3](#). This requirement shall not apply to flexible connectors that are an integral part of a faucet that complies with ASME A112.8.1/CAN/CSA-B125.1.

5.4.2 Set-up

The test assembly shall be set up in accordance with Part 4 of ANSI/ISA-75.02. The test specimen shall consist of a flexible water connector bent 180° around a mandrel of the applicable size specified in [Table 1](#).

5.4.3 Procedure

The pressure drop test shall be conducted as follows:

- (a) Supply water at the applicable flow rate specified in [Table 1](#) for at least 30 s.
- (b) At the end of the 30 s, measure the pressure drop across the specimen.

5.5 Torque test

Flexible connectors shall not leak or otherwise fail when tested in accordance with [Clause 5.3.4.2](#) of ASME A112.18.1/CAN/CSA-B125.1.

6 Markings

6.1

Except as specified in [Clause 6.2](#), flexible connectors shall be permanently marked with the manufacturer's recognized name, trademark, or other mark.

6.2

Flexible connectors that are not permanently marked with the manufacturer's recognized name, trademark, or other mark shall be permanently marked with the recognized name, trademark, or other mark of the customer for whom the connector was manufactured.

6.3

Flexible connectors marked in accordance with [Clause 6.1](#) may also be marked with the name, trademark, or other mark of the customer for whom the connector was manufactured, by placing a permanent mark or non-permanent label or tag on the connector.

6.4

6.4.1

In addition to meeting the requirements of [Clause 6.1](#) or [6.2](#), flexible connectors shall be marked "For use with water in accessible locations only".* This requirement shall be met by placing a permanent mark or non-permanent label or tag on the connector.

*The equivalent French wording is "Pour utilisation avec de l'eau dans les endroits accessibles seulement".

6.4.2

The requirement in [Clause 6.4.1](#) shall not apply to flexible connectors that are an integral part of a faucet that complies with ASME A112.8.1/CAN/CSA-B125.1.

Table 1
Maximum pressure drop for flexible connectors
(See [Clause 5.4.](#))

Application	Typical nominal sizes	Mandrel size, mm (in)	Flow rate, L/m (gpm)	Maximum pressure drop, kPa (psi)
Clothes washer	3/4 in hose thread	127.0 (5.0)	15.1 (4.0)	172.4 (25.0)
Faucet or dishwasher	3/8 to 1/2 in OD tube	127.0 (5.0)	7.6 (2.0)	103.4 (15.0)
Fill valve	3/8 to 1/2 in OD tube	127.0 (5.0)	7.6 (2.0)	69.0 (10.0)
General connector	NPS-1	304.8 (12.0)	94.6 (25.0)	13.8 (2.0)
	NPS-1-1/4	381.0 (15.0)	113.6 (30.0)	13.8 (2.0)
	NPS-1-1/2	457.2 (18.0)	113.6 (30.0)	13.8 (2.0)
	NPS-2	609.6 (24.0)	151.4 (40.0)	13.8 (2.0)
Icemaker	1/4 in OD tube	127.0 (5.0)	3.8 (1.0)	110.3 (16.0)
Water heater	5/8 to 7/8 in OD tube or NPS-3/4 pipe	127.0 (5.0)	37.9 (10.0)	27.6 (4.0)

Notes:

(1) Tolerances on mandrel sizes shall be $\pm 5\%$.

(2) Tolerances for flow rates shall be -0% , $+5\%$.

Annex A (informative)

Exposure to aqueous chloramine

Note: *This Annex is not a mandatory part of this Standard.*

A.1 General

Accelerated life-cycle testing and anecdotal evidence have shown that exposure to aqueous chloramine can have deleterious effects on some elastomers used for flexible connectors. ASTM D 6284 can be useful in evaluating the chloramine resistance of elastomers.

Annex B (informative)

Unit conversion and rounding criteria

Note: *This Annex is not a mandatory part of this Standard.*

B.1

The following conversion rules are used in this Standard:

- (a) Zeros to the left of the first non-zero digit are not significant.
- (b) If the number is greater than 1, all zeros to the right of the decimal point are significant.
- (c) In multiplication and division, the original number with the smallest number of significant digits determines the number of significant digits in the product or quotient.
- (d) If an exact constant is used (e.g., 3 ft = 1 yd), it does not affect the number of significant digits in the calculated value.
- (e) If inexact constants are used (e.g., $\pi = 3.1416$), the constant with at least one more significant digit than the smallest number of significant digits in the original data is used.

B.2

The following rounding rules are used in this Standard:

- (a) The digits that follow the last significant digit are dropped if the first digit is less than 5.
- (b) If the first digit dropped is greater than 5, the preceding digit is increased by 1.
- (c) If the first digit dropped is 5 and there are non-zero digits following the 5, the preceding digit is increased by 1.
- (d) If the first digit dropped is 5 and there are only zeros following the 5, the digit is rounded to the even number (e.g., for three significant digits, 1.655000 becomes 1.66, 1.625000 becomes 1.62).
- (e) For maximums and minimums, rounding is performed within the range of the maximum and minimum values in a way that does not violate the original limits.

Proposition de modification

N'hésitez pas à nous faire part de vos suggestions et de vos commentaires. Au moment de soumettre des propositions de modification aux normes CSA et autres publications CSA prière de fournir les renseignements demandés ci-dessous et de formuler les propositions sur une feuille volante. Il est recommandé d'inclure

- le numéro de la norme/publication
- le numéro de l'article, du tableau ou de la figure visé
- la formulation proposée
- la raison de cette modification.

Proposal for change

CSA welcomes your suggestions and comments. To submit your proposals for changes to CSA Standards and other CSA publications, please supply the information requested below and attach your proposal for change on a separate page(s). Be sure to include the

- Standard/publication number
- relevant Clause, Table, and/or Figure number(s)
- wording of the proposed change
- rationale for the change.

J'accepte que la CSA conserve et utilise les renseignements ci-dessus afin de faciliter la réception de mes suggestions et commentaires.

I consent to CSA collecting and using the above information to facilitate the collection of my suggestions and comments.

Consultez la politique CSA en matière de confidentialité au www.csagroup.org/legal pour savoir comment nous protégeons vos renseignements personnels.

Visit CSA's policy on privacy at www.csagroup.org/legal to find out how we protect your personal information.

The Canadian Standards Association (CSA) prints its publications on Rolland Enviro100, which contains 100% recycled post-consumer fibre, is EcoLogo and Processed Chlorine Free certified, and was manufactured using biogas energy.
