 - 2.1. Normative References
 - 2.2. Informative References/Bibliography
3. Requirements
 - 3.1. Relevant Libraries
4. Terms and Definitions
5. Documentation Conventions

II. Graphic Libraries

6. Libraries
 - 6.1. Interfaces for libX11
 - 6.2. Data Definitions for libX11
 - 6.3. Interface Definitions for libX11
 - 6.4. Interfaces for libSM
 - 6.5. Data Definitions for libSM
 - 6.6. Interfaces for libICE
 - 6.7. Data Definitions for libICE
 - 6.8. Interface Definitions for libICE
 - 6.9. Interfaces for libXt
 - 6.10. Data Definitions for libXt
 - 6.11. Interface Definitions for libXt
 - 6.12. Interfaces for libXext
 - 6.13. Data Definitions for libXext
 - 6.14. Interface Definitions for libXext
 - 6.15. Interfaces for libXi
 - 6.16. Data Definitions for libXi
 - 6.17. Interfaces for libXtst
 - 6.18. Data Definitions for libXtst

III. OpenGL Libraries

7. Libraries
 - 7.1. Interfaces for libGL
 - 7.2. Data Definitions for libGL
 - 7.3. Interfaces for libGLU
 - 7.4. Data Definitions for libGLU

IV. PNG12 library

8. Libraries
 - 8.1. Interfaces for libpng12
 - 8.2. Data Definitions for libpng12
 - 8.3. Interface Definitions for libpng12

V. JPEG library

9. Libraries
 - 9.1. Interfaces for libjpeg
 - 9.2. Data Definitions for libjpeg
 - 9.3. Interface Definitions for libjpeg

VI. Fontconfig library

10. Libraries
 - 10.1. Interfaces for libfontconfig
 - 10.2. Data Definitions for libfontconfig
11. Commands and Utilities

- 11.1. Commands and Utilities
 - 11.2. Command Behavior
- VII. Freetype library
 - 12. Libraries
 - 12.1. Interfaces for libfreetype
 - 12.2. Data Definitions for libfreetype
 - 12.3. Interface Definitions for libfreetype
- VIII. Xft library
 - 13. Libraries
 - 13.1. Interfaces for libXft
 - 13.2. Data Definitions for libXft
 - 13.3. Interface Definitions for libXft
- IX. Xrender library
 - 14. Libraries
 - 14.1. Interfaces for libXrender
 - 14.2. Data Definitions for libXrender
 - 14.3. Interface Definitions for libXrender
- X. Cairo Vector Graphics library
 - 15. Libraries
 - 15.1. Interfaces for libcairo
 - 15.2. Data Definitions for libcairo
- XI. GTK+ Stack Libraries
 - 16. Libraries
 - 16.1. Introduction
 - 16.2. Interfaces for libglib-2.0
 - 16.3. Data Definitions for libglib-2.0
 - 16.4. Interface Definitions for libglib-2.0
 - 16.5. Interfaces for libgobject-2.0
 - 16.6. Data Definitions for libgobject-2.0
 - 16.7. Interface Definitions for libgobject-2.0
 - 16.8. Interfaces for libgmodule-2.0
 - 16.9. Data Definitions for libgmodule-2.0
 - 16.10. Interfaces for libgthread-2.0
 - 16.11. Interfaces for libatk-1.0
 - 16.12. Data Definitions for libatk-1.0
 - 16.13. Interfaces for libpango-1.0
 - 16.14. Data Definitions for libpango-1.0
 - 16.15. Interfaces for libpangocairo-1.0
 - 16.16. Data Definitions for libpangocairo-1.0
 - 16.17. Interfaces for libpangoft2-1.0
 - 16.18. Data Definitions for libpangoft2-1.0
 - 16.19. Interfaces for libpangoft2-1.0
 - 16.20. Data Definitions for libpangoft2-1.0
 - 16.21. Interfaces for libgdk_pixbuf-2.0
 - 16.22. Data Definitions for libgdk_pixbuf-2.0
 - 16.23. Interfaces for libgdk_pixbuf_xlib-2.0
 - 16.24. Data Definitions for libgdk_pixbuf_xlib-2.0
 - 16.25. Interfaces for libgdk-x11-2.0
 - 16.26. Data Definitions for libgdk-x11-2.0
 - 16.27. Interfaces for libgtk-x11-2.0
 - 16.28. Data Definitions for libgtk-x11-2.0

16.29. Interface Definitions for libgtk-x11-2.0

XII. Qt Libraries

17. Libraries

- 17.1. Introduction
- 17.2. Interfaces for libQtCore
- 17.3. Data Definitions for libQtCore
- 17.4. Interface Definitions for libQtCore
- 17.5. Interfaces for libQtGui
- 17.6. Data Definitions for libQtGui
- 17.7. Interface Definitions for libQtGui
- 17.8. Interfaces for libQtXml
- 17.9. Data Definitions for libQtXml
- 17.10. Interfaces for libQtOpenGL
- 17.11. Data Definitions for libQtOpenGL
- 17.12. Interface Definitions for libQtOpenGL
- 17.13. Interfaces for libQtSql
- 17.14. Data Definitions for libQtSql
- 17.15. Interface Definitions for libQtSql
- 17.16. Interfaces for libQtSvg
- 17.17. Data Definitions for libQtSvg
- 17.18. Interfaces for libQtNetwork
- 17.19. Data Definitions for libQtNetwork
- 17.20. Interface Definitions for libQtNetwork

XIII. Qt3 Library

18. Library

- 18.1. Introduction
- 18.2. Interfaces for libqt-mt

XIV. XML2 library

19. Libraries

- 19.1. Interfaces for libxml2
- 19.2. Data Definitions for libxml2

XV. ALSA sound library

20. Libraries

- 20.1. Interfaces for libasound
- 20.2. Data Definitions for libasound

XVI. Desktop Environment

21. Desktop Environment

- 21.1. Desktop Base Directory
- 21.2. Desktop Entries
- 21.3. Desktop Menu Specification
- 21.4. Icon Theme Specification

22. Desktop Commands

- 22.1. Xdg-utils

XVII. Package Information

23. Package Dependencies

- 23.1. Package Dependencies

Foreword

This is version 4.1 of the Linux Standard Base Desktop Specification. This specification is one of a series of volumes under the collective title *Linux Standard Base*:

- Core
- C++
- Desktop
- Languages
- Printing

Note that the Core, C++ and Desktop volumes consist of a generic volume augmented by an architecture-specific volume.

Status of this Document

This is a released specification. Other documents may supersede or augment this specification. A list of current Linux Standard Base (LSB) specifications is available at <http://refspecs.linuxfoundation.org>.

If you wish to make comments regarding this document in a manner that is tracked by the LSB project, please submit them using our public bug database at <http://bugs.linuxbase.org>. Please enter your feedback, carefully indicating the title of the section for which you are submitting feedback, and the volume and version of the specification where you found the problem, quoting the incorrect text if appropriate. If you are suggesting a new feature, please indicate what the problem you are trying to solve is. That is more important than the solution, in fact.

If you do not have or wish to create a bug database account then you can also e-mail feedback to [<lsb-discuss@lists.linuxfoundation.org>](mailto:lsb-discuss@lists.linuxfoundation.org) ([subscribe](#), [archives](#)), and arrangements will be made to transpose the comments to our public bug database.

Introduction

The LSB defines a binary interface for application programs that are compiled and packaged for LSB-conforming implementations on many different hardware architectures. A binary specification must include information specific to the computer processor architecture for which it is intended. To avoid the complexity of conditional descriptions, the specification has instead been divided into generic parts which are augmented by one of several architecture-specific parts, depending on the target processor architecture; the generic part will indicate when reference must be made to the architecture part, and vice versa.

This document should be used in conjunction with the documents it references. This document enumerates the system components it includes, but descriptions of those components may be included entirely or partly in this document, partly in other documents, or entirely in other reference documents. For example, the section that describes system service routines includes a list of the system routines supported in this interface, formal declarations of the data structures they use that are visible to applications, and a pointer to the underlying referenced specification for information about the syntax and semantics of each call. Only those routines not described in standards referenced by this document, or extensions to those standards, are described in the detail. Information referenced in this way is as much a part of this document as is the information explicitly included here.

The specification carries a version number of either the form $x.y$ or $x.y.z$. This version number carries the following meaning:

1. The first number (x) is the major version number. Versions sharing the same major version number shall be compatible in a backwards direction; that is, a newer version shall be compatible with an older version. Any deletion of a library results in a new major version number. Interfaces marked as deprecated may be removed from the specification at a major version change.
2. The second number (y) is the minor version number. Libraries and individual interfaces may be added, but not removed. Interfaces may be marked as deprecated at a minor version change. Other minor changes may be permitted at the discretion of the LSB workgroup.
3. The third number (z), if present, is the editorial level. Only editorial changes should be included in such versions.

Since this specification is a descriptive Application Binary Interface, and not a source level API specification, it is not possible to make a guarantee of 100% backward compatibility between major releases. However, it is the intent that those parts of the binary interface that are visible in the source level API will remain backward compatible from version to version, except where a feature marked as "Deprecated" in one release may be removed from a future release. Implementors are strongly encouraged to make use of symbol versioning to permit simultaneous support of applications conforming to different releases of this specification.

LSB is a trademark of the Linux Foundation. Developers of applications or implementations interested in using the trademark should see the Linux Foundation Certification Policy for details.

I. Introductory Elements

Table of Contents

1. Scope
 2. References
 - 2.1. Normative References
 - 2.2. Informative References/Bibliography
 3. Requirements

 5. Documentation Conventions
-

Chapter 1. Scope

The LSB Desktop module defines components found on an LSB conforming system.

Chapter 2. References

2.1. Normative References

The specifications listed below are referenced in whole or in part by the LSB Desktop specification. Such references may be normative or informative; a reference to specification shall only be considered normative if it is explicitly cited as such. The LSB Desktop specification may make normative references to a portion of these specifications (that is, to define a specific function or group of functions); in such cases, only the explicitly referenced portion of the specification is to be considered normative.

Chapter 3. Requirements

3.1. Relevant Libraries

The libraries listed in [Table 3-1](#) shall be available on a Linux Standard Base - Desktop system, with the specified runtime names. This list may be supplemented or amended by the architecture-specific specification.

Table 3-1. Standard Library Names

Library	Runtime Name
libX11	libX11.so.6
libXt	libXt.so.6
libGL	libGL.so.1
libXext	libXext.so.6
libICE	libICE.so.6
libSM	libSM.so.6
libXi	libXi.so.6
libGLU	libGLU.so.1
libXtst	libXtst.so.6
libglib-2.0	libglib-2.0.so.0
libgobject-2.0	libgobject-2.0.so.0
libgmodule-2.0	libgmodule-2.0.so.0
libgthread-2.0	libgthread-2.0.so.0
libatk-1.0	libatk-1.0.so.0
libpango-1.0	libpango-1.0.so.0
libpangoft2-1.0	libpangoft2-1.0.so.0
libpangocairo-1.0	libpangocairo-1.0.so.0
libgdk_pixbuf-2.0	libgdk_pixbuf-2.0.so.0
libgdk_pixbuf_xlib-2.0	libgdk_pixbuf_xlib-2.0.so.0
libgdk-x11-2.0	libgdk-x11-2.0.so.0
libgtk-x11-2.0	libgtk-x11-2.0.so.0
libpangocairo-1.0	libpangocairo-1.0.so.0
libQtCore	libQtCore.so.4
libQtGui	libQtGui.so.4

libQtNetwork	libQtNetwork.so.4
libQtXml	libQtXml.so.4
libQtOpenGL	libQtOpenGL.so.4
libQtSql	libQtSql.so.4
libQtSvg	libQtSvg.so.4
libfontconfig	libfontconfig.so.1
libpng12	libpng12.so.0
libjpeg	libjpeg.so.62
libXrender	libXrender.so.1
libfreetype	libfreetype.so.6
libXft	libXft.so.2
libcairo	libcairo.so.2
libxml2	libxml2.so.2
libqt-mt	libqt-mt.so.3
libasound	libasound.so.2

These libraries will be in an implementation-defined directory which the dynamic linker shall search by default.

Chapter 4. Terms and Definitions

For the purposes of this document, the terms given in *ISO/IEC Directives, Part 2, Annex H* and the following apply.

archLSB

Some LSB specification documents have both a generic, architecture-neutral part and an architecture-specific part. The latter describes elements whose definitions may be unique to a particular processor architecture. The term archLSB may be used in the generic part to refer to the corresponding section of the architecture-specific part.

Binary Standard, ABI

The total set of interfaces that are available to be used in the compiled binary code of a conforming application, including the run-time details such as calling conventions, binary format, C++ name mangling, etc.

Implementation-defined

Describes a value or behavior that is not defined by this document but is selected by an implementor. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence of the value or behavior. An application that relies on such a value or behavior cannot be assured to be portable across conforming implementations. The implementor shall document such a value or behavior so that it can be used correctly by an application.

Shell Script

A file that is read by an interpreter (e.g., awk). The first line of the shell script includes a reference to its interpreter binary.

Source Standard, API

The total set of interfaces that are available to be used in the source code of a conforming application. Due to translations, the Binary Standard and the Source Standard may contain some different interfaces.

Undefined

Describes the nature of a value or behavior not defined by this document which results from use of an invalid program construct or invalid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

Unspecified

Describes the nature of a value or behavior not specified by this document which results from use of a valid program construct or valid data input. The value or behavior may vary among implementations that conform to this document. An application should not rely on the existence or validity of the value or behavior. An application that relies on any particular value or behavior cannot be assured to be portable across conforming implementations.

In addition, for the portions of this specification which build on IEEE Std 1003.1-2001, the definitions given in *IEEE Std 1003.1-2001, Base Definitions, Chapter 3* apply.

Chapter 5. Documentation Conventions

Throughout this document, the following typographic conventions are used:

<code>function()</code>	the name of a function
command	the name of a command or utility
<code>CONSTANT</code>	a constant value
<i>parameter</i>	a parameter
<code>variable</code>	a variable

Throughout this specification, several tables of interfaces are presented. Each entry in these tables has the following format:

<code>name</code>	the name of the interface
<code>(symver)</code>	An optional symbol version identifier, if required.
<code>[refno]</code>	A reference number indexing the table of referenced specifications that follows this table.

For example,

`forkpty(GLIBC_2.0) [SUSv3]`

refers to the interface named `forkpty()` with symbol version `GLIBC_2.0` that is defined in the `SUSv3` reference.

Note: For symbols with versions which differ between architectures, the symbol versions are defined in the architecture specific parts of ISO/IEC 23360 only.

Chapter 6. Libraries

The X Libraries should be built thread-safe.

6.1. Interfaces for libX11

[Table 6-1](#) defines the library name and shared object name for the libX11 library

Table 6-1. libX11 Definition

Library:	libX11
SONAME:	libX11.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

[XKBlib] [X11 Keyboard Extension](#)

[Xlib] [X11 C Library](#)

6.1.1. X Window System Interface

6.1.1.1. Interfaces for X Window System Interface

An LSB conforming implementation shall provide the generic functions for X Window System Interface specified in [Table 6-2](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-2. libX11 - X Window System Interface Function Interfaces

XActivateScreenSaver [Xlib]	XAddConnectionWatch [Xlib]	XAddExtension [Xlib]	XAddHost [Xlib]

6.2. Data Definitions for libX11

This section defines global identifiers and their values that are associated with interfaces contained in libX11. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

6.3. Interface Definitions for libX11

The interfaces defined on the following pages are included in libX11 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 6.1](#) shall behave as described in the referenced base document.

6.4. Interfaces for libSM

[Table 6-3](#) defines the library name and shared object name for the libSM library

Table 6-3. libSM Definition

Library:	libSM
SONAME:	libSM.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[XSM] [X11 Session Management](#)

6.4.1. Session Management Functions

6.4.1.1. Interfaces for Session Management Functions

An LSB conforming implementation shall provide the generic functions for Session Management Functions specified in [Table 6-4](#), with the full mandatory functionality as described in the referenced underlying specification.

6.6. Interfaces for libICE

[Table 6-5](#) defines the library name and shared object name for the libICE library

Table 6-5. libICE Definition

Library:	libICE
SONAME:	libICE.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

[XICE] [X11 Inter-Client Exchange](#)

6.6.1. ICE Functions

6.6.1.1. Interfaces for ICE Functions

An LSB conforming implementation shall provide the generic functions for ICE Functions specified in [Table 6-6](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-6. libICE - ICE Functions Function Interfaces

IceAcceptConnection [XICE]	IceAddConnectionWatch [XICE]	IceAllocScratch [XICE]	IceAppLockConn [XICE]
IceAppUnlockConn [XICE]	IceAuthFileName [XICE]	IceCheckShutdownNegotiation [XICE]	IceCloseConn [XICE]
IceComposeNetworkIdList [XICE]	IceConnectionNumber [XICE]	IceConnectionStatus [XICE]	IceConnectionS [XICE]
IceFlush [XICE]	IceFreeAuthFileEntry [XICE]	IceFreeListenObjs [XICE]	IceGenerateMag [XICE]

	IceProtocolShutdown [XICE]		
IceRegisterForProtocolReply [XICE]	IceRegisterForProtocolSetup [XICE]	IceRelease [XICE]	IceRemoveConn [XICE]
IceSetErrorHandler [XICE]	IceSetHostBasedAuthProc [XICE]	IceSetIOErrorHandler [XICE]	IceSetPaAuthDa
IceSetShutdownNegotiation [XICE]	IceSwapping [XICE]	IceUnlockAuthFile [XICE]	IceVendor [XIC
IceWriteAuthFileEntry [XICE]	_IceRead [LSB]	_IceReadSkip [LSB]	_IceWrite [LSB

An LSB conforming implementation shall provide the generic deprecated functions for ICE Functions specified in [Table 6-7](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 6-7. libICE - ICE Functions Deprecated Function Interfaces

IceAppLockConn [XICE]	IceAppUnlockConn [XICE]	IceInitThreads [XICE]	

6.7. Data Definitions for libICE

This section defines global identifiers and their values that are associated with interfaces contained in libICE. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

6.8. Interface Definitions for libICE

Table of Contents

IceRead -- read the specified number of bytes from an ICE connection

IceReadSkip -- advance to the end of the message when a bad header is read

IceWrite -- write the specified number of bytes of data to an ICE connection

The interfaces defined on the following pages are included in libICE and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 6.6](#) shall behave as described in the referenced base document.

_IceRead

Name

`_IceRead` -- read the specified number of bytes from an ICE connection

Synopsis

```
#include <X11/ICE/ICEmsg.h>
int _IceRead(IceConn iceConn, unsigned long int nbytes, char * ptr);
```

Description

The interface `_IceRead()` shall read the specified number of bytes from an Inter-Client Exchange connection.

The parameter *iceConn* shall specify the Inter-Client Exchange connection.

The parameter *nbytes* shall specify the number of bytes to read.

The output parameter *ptr* shall contain the data that was read.

Return Value

`_IceRead()` shall return 0 if it detects that the connection has closed and this was expected.

In the case of a fatal I/O error, `_IceRead()` shall return 1.

See Also

`_IceReadSkip()`, `_IceWrite()`.

_IceReadSkip

Name

_IceReadSkip -- advance to the end of the message when a bad header is read

Synopsis

```
#include <X11/ICE/ICEmsg.h>
void _IceReadSkip(IceConn iceConn, unsigned long int nbytes);
```

Description

The interface `_IceReadSkip()` shall advance to the end of the message when a header with a bad major or minor opcode is read, so the next message can be processed correctly.

The parameter *iceConn* shall specify the Inter-Client Exchange connection.

The parameter *nbytes* shall specify the number of bytes to skip. If the number of bytes specified is less than 512, the interface shall assume 512 bytes should be skipped.

See Also

`_IceRead()`, `_IceWrite()`.

_IceWrite

Name

`_IceWrite` -- write the specified number of bytes of data to an ICE connection

Synopsis

```
#include <X11/ICE/ICEmsg.h>
void _IceWrite(IceConn iceConn, unsigned long int nbytes, char * ptr);
```

Description

The interface `_IceWrite()` shall write the specified number of bytes to an Inter-Client Exchange connection.

The parameter *iceConn* shall specify the Inter-Client Exchange connection.

The parameter *nbytes* shall specify the number of bytes of the specified data to write.

The parameter *ptr* shall contain the data to write.

See Also

`_IceRead()`, `_IceReadSkip()`.

6.9. Interfaces for libXt

Table 6-8 defines the library name and shared object name for the libXt library

Table 6-8. libXt Definition

Library:	libXt
SONAME:	libXt.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

[Xt] [X11 Toolkit Intrinsic](#)

6.9.1. X Toolkit

6.9.1.1. Interfaces for X Toolkit

An LSB conforming implementation shall provide the generic functions for X Toolkit specified in [Table 6-9](#), with the full mandatory functionality as described in the referenced underlying specification.

6.10. Data Definitions for libXt

This section defines global identifiers and their values that are associated with interfaces contained in libXt. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

6.11. Interface Definitions for libXt

Table of Contents

XtCopyFromArg -- Copy "size" bytes from src to dst.

XtInherit -- inheritance operation.

XtInheritTranslations -- an inheritance constant

XtIsSubclassOf -- determine if Widget is a subclass of WidgetClass.

The interfaces defined on the following pages are included in libXt and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 6.9](#) shall behave as described in the referenced base document.

_XtCopyFromArg

Name

_XtCopyFromArg -- Copy "size" bytes from src to dst.

Synopsis

```
void _XtCopyFromArg(XtArgVal src, char* dst, unsigned int size);
```

Description

The _XtCopyFromArg() function copies "size" bytes from src to dst. This is an internal X function call.

_XtInherit

Name

_XtInherit -- inheritance operation.

Synopsis

```
#include <IntrinsicP.h>

extern void _XtInherit(
#ifdef NeedFunctionPrototypes
    void
#endif
);
```

Description

_XtInherit() is a procedure that issues an error message if it is actually called.

_XtInheritTranslations

Name

_XtInheritTranslations -- an inheritance constant

Synopsis

```
#include <CoreP.h>

externalref int _XtInheritTranslations;
```

Description

_XtInheritTranslations is an inheritance constant.

_XtIsSubclassOf

Name

`_XtIsSubclassOf` -- determine if Widget is a subclass of WidgetClass.

Synopsis

```
#include <Intrinsic.h>

extern Boolean _XtIsSubclassOf(
    Widget          /* object*   /,
    WidgetClass     /* widget_class *//,
    WidgetClass     /* flag_class *//,
    _XtXtEnum       /* type_flag *//,
);
```

Description

Determine if Widget(object) is a subclass of WidgetClass(widget_class).

6.12. Interfaces for libXext

[Table 6-11](#) defines the library name and shared object name for the libXext library

Table 6-11. libXext Definition

Library:	libXext
SONAME:	libXext.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)
[X-dbe] [Double Buffer Extension Library](#)
[X-DPMS] [X Display Power Management Signaling](#)
[X-evi] [X Extended Visual Interface Extension](#)
[X-security] [X Security Extension Specification](#)
[X-shape] [X Nonrectangular Window Shape Extension Library](#)
[X-shm] [The MIT Shared Memory Extension](#)
[X-sync] [X Synchronization Extension Library](#)

6.12.1. libXext interfaces

6.12.1.1. Interfaces for libXext interfaces

An LSB conforming implementation shall provide the generic functions for libXext interfaces specified in [Table 6-12](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-12. libXext - libXext interfaces Function Interfaces

XMissingExtension [LSB]	XSetExtensionErrorHandler [LSB]	XextAddDisplay [LSB]	XextCreateExtension [LSB]
XextDestroyExtension [LSB]	XextFindDisplay [LSB]	XextRemoveDisplay [LSB]	

6.12.2. X Shape Extension

6.12.2.1. Interfaces for X Shape Extension

An LSB conforming implementation shall provide the generic functions for X Shape Extension specified in [Table 6-13](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-13. libXext - X Shape Extension Function Interfaces

XShapeCombineMask [X-shape]	XShapeCombineRectangles [X-shape]	XShapeCombineRegion [X-shape]	XShapeCombineShape [X-shape]
XShapeGetRectangles [X-shape]	XShapeInputSelected [X-shape]	XShapeOffsetShape [X-shape]	XShapeQueryExtension [X-shape]
XShapeQueryExtents [X-shape]	XShapeQueryVersion [X-shape]	XShapeSelectInput [X-shape]	

6.12.3. X Display Power Management Signaling Extension

6.12.3.1. Interfaces for X Display Power Management Signaling Extension

An LSB conforming implementation shall provide the generic functions for X Display Power Management Signaling Extension specified in [Table 6-14](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-14. libXext - X Display Power Management Signaling Extension Function Interfaces

DPMSCapable [X-DPMS]	DPMSDisable [X-DPMS]	DPMSEnable [X-DPMS]	DPMSForceLevel [X-DPMS]

DPMSGetTimeouts [X-DPMS]	DPMSGetVersion [X-DPMS]	DPMSInfo [X-DPMS]	DPMSQueryExtension [X-DPMS]
DPMSSetTimeouts [X-DPMS]			

6.12.4. X Shared Memory Extensions

6.12.4.1. Interfaces for X Shared Memory Extensions

An LSB conforming implementation shall provide the generic functions for X Shared Memory Extensions specified in [Table 6-15](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-15. libXext - X Shared Memory Extensions Function Interfaces

XShmAttach [X-shm]	XShmCreateImage [X-shm]	XShmCreatePixmap [X-shm]	XShmDetach [X-shm]
XShmGetEventBase [X-shm]	XShmGetImage [X-shm]	XShmPixmapFormat [X-shm]	XShmPutImage [X-shm]
XShmQueryExtension [X-shm]	XShmQueryVersion [X-shm]		

6.12.5. X Synchronization Extension

6.12.5.1. Interfaces for X Synchronization Extension

An LSB conforming implementation shall provide the generic functions for X Synchronization Extension specified in [Table 6-16](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-16. libXext - X Synchronization Extension Function Interfaces

XSyncAwait [X-sync]	XSyncChangeAlarm [X-sync]	XSyncChangeCounter [X-sync]	XSyncCreateAlarm [X-sync]
XSyncCreateCounter [X-sync]	XSyncDestroyAlarm [X-sync]	XSyncDestroyCounter [X-sync]	XSyncFreeSystemCounterList [X-sync]
XSyncGetPriority [X-sync]	XSyncInitialize [X-sync]	XSyncIntToValue [X-sync]	XSyncIntsToValue [X-sync]
XSyncListSystemCounters [X-sync]	XSyncMaxValue [X-sync]	XSyncMinValue [X-sync]	XSyncQueryAlarm [X-sync]
XSyncQueryCounter [X-sync]	XSyncQueryExtension [X-sync]	XSyncSetCounter [X-sync]	XSyncSetPriority [X-sync]

XSyncValueAdd [X-sync]	XSyncValueEqual [X-sync]	XSyncValueGreaterOrEqual [X-sync]	XSyncValueGreaterThan [X-sync]
XSyncValueHigh32 [X-sync]	XSyncValueIsNegative [X-sync]	XSyncValueIsPositive [X-sync]	XSyncValueIsZero [X-sync]
XSyncValueLessOrEqual [X-sync]	XSyncValueLessThan [X-sync]	XSyncValueLow32 [X-sync]	XSyncValueSubtract [X-sync]

6.12.6. X Security Extension

6.12.6.1. Interfaces for X Security Extension

An LSB conforming implementation shall provide the generic functions for X Security Extension specified in [Table 6-17](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-17. libXext - X Security Extension Function Interfaces

XSecurityAllocXauth [X-security]	XSecurityFreeXauth [X-security]	XSecurityGenerateAuthorization [X-security]	XSecurityQueryExtension [X-security]
XSecurityRevokeAuthorization [X-security]			

6.12.7. X Double Buffer Extension

6.12.7.1. Interfaces for X Double Buffer Extension

An LSB conforming implementation shall provide the generic functions for X Double Buffer Extension specified in [Table 6-18](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-18. libXext - X Double Buffer Extension Function Interfaces

XdbeAllocateBackBufferName [X-dbe]	XdbeBeginIdiom [X-dbe]	XdbeDeallocateBackBufferName [X-dbe]	XdbeEndIdiom [X-dbe]
XdbeFreeVisualInfo [X-dbe]	XdbeGetBackBufferAttributes [X-dbe]	XdbeGetVisualInfo [X-dbe]	XdbeQueryExtension [X-dbe]
XdbeSwapBuffers [X-dbe]			

6.12.8. X Extended Visual Interface Extension

6.12.8.1. Interfaces for X Extended Visual Interface Extension

An LSB conforming implementation shall provide the generic functions for X Extended Visual Interface Extension specified in [Table 6-19](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-19. libXext - X Extended Visual Interface Extension Function Interfaces

XeviGetVisualInfo [X-evi]	XeviQueryExtension [X-evi]	XeviQueryVersion [X-evi]	

6.13. Data Definitions for libXext

This section defines global identifiers and their values that are associated with interfaces contained in libXext. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

6.14. Interface Definitions for libXext

The interfaces defined on the following pages are included in libXext and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 6.12](#) shall behave as described in the referenced base document.

6.15. Interfaces for libXi

[Table 6-20](#) defines the library name and shared object name for the libXi library

Table 6-20. libXi Definition

Library:	libXi
SONAME:	libXi.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[XINPUT] [X11 Input Library](#)

6.15.1. XInput

6.15.1.1. Interfaces for XInput

An LSB conforming implementation shall provide the generic functions for XInput specified in [Table 6-21](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-21. libXi - XInput Function Interfaces

XAllowDeviceEvents [XINPUT]	XChangeDeviceControl [XINPUT]	XChangeDeviceDontPropagateList [XINPUT]	XChangeDeviceKey [XINPUT]
XChangeFeedbackControl [XINPUT]	XChangeKeyboardDevice [XINPUT]	XChangePointerDevice [XINPUT]	XCloseDevice [XINPUT]
XDeviceBell [XINPUT]	XFreeDeviceControl [XINPUT]	XFreeDeviceList [XINPUT]	XFreeDeviceMotion [XINPUT]
XFreeDeviceState [XINPUT]	XFreeFeedbackList [XINPUT]	XGetDeviceButtonMapping [XINPUT]	XGetDeviceControl [XINPUT]
XGetDeviceDontPropagateList [XINPUT]	XGetDeviceFocus [XINPUT]	XGetDeviceKeyMapping [XINPUT]	XGetDeviceModifie [XINPUT]
XGetDeviceMotionEvents [XINPUT]	XGetExtensionVersion [XINPUT]	XGetFeedbackControl [XINPUT]	XGetSelectedExtens [XINPUT]
XGrabDevice [XINPUT]	XGrabDeviceButton [XINPUT]	XGrabDeviceKey [XINPUT]	XListInputDevices
XOpenDevice [XINPUT]	XQueryDeviceState [XINPUT]	XSelectExtensionEvent [XINPUT]	XSendExtensionEve [XINPUT]

XSetDeviceValuators [XINPUT]	XUngrabDevice [XINPUT]	XUngrabDeviceButton [XINPUT]	XUngrabDeviceKey [XINPUT]

6.16. Data Definitions for libXi

This section defines global identifiers and their values that are associated with interfaces contained in libXi. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

6.17. Interfaces for libXtst

[Table 6-22](#) defines the library name and shared object name for the libXtst library

Table 6-22. libXtst Definition

Library:	libXtst
SONAME:	libXtst.so.6

The behavior of the interfaces in this library is specified by the following specifications:

[X-test] [XTEST Extension Library](#)

6.17.1. libXtst Interfaces

6.17.1.1. Interfaces for libXtst Interfaces

An LSB conforming implementation shall provide the generic functions for libXtst Interfaces specified in [Table 6-23](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 6-23. libXtst - libXtst Interfaces Function Interfaces

XTestCompareCurrentCursorWithWindow [X-test]	XTestCompareCursorWithWindow [X-test]	XTestDiscard [X-test]	X [X-test]
XTestFakeDeviceButtonEvent [X-test]	XTestFakeDeviceKeyEvent [X-test]	XTestFakeDeviceMotionEvent [X-test]	X [X-test]
XTestFakeMotionEvent [X-test]	XTestFakeProximityEvent [X-test]	XTestFakeRelativeMotionEvent [X-test]	X [X-test]
XTestQueryExtension [X-test]	XTestSetGContextOfGC [X-test]	XTestSetVisualIDOfVisual [X-test]	

6.18. Data Definitions for libXtst

This section defines global identifiers and their values that are associated with interfaces contained in libXtst. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

7.2. Data Definitions for libGL

This section defines global identifiers and their values that are associated with interfaces contained in libGL. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

7.2.1. GL/gl.h

7.3. Interfaces for libGLU

[Table 7-4](#) defines the library name and shared object name for the libGLU library

Table 7-4. libGLU Definition

Library:	libGLU
SONAME:	libGLU.so.1

The behavior of the interfaces in this library is specified by the following specifications:

[GLU] [OpenGL Utilities](#)

7.3.1. GL Utilities

7.3.1.1. Interfaces for GL Utilities

An LSB conforming implementation shall provide the generic functions for GL Utilities specified in [Table 7-5](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 7-5. libGLU - GL Utilities Function Interfaces

gluBeginCurve [GLU]	gluBeginPolygon [GLU]	gluBeginSurface [GLU]	gluBeginTrim [GLU]

7.4. Data Definitions for libGLU

This section defines global identifiers and their values that are associated with interfaces contained in libGLU. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

IV. PNG12 library

Table of Contents

8. Libraries

8.1. Interfaces for libpng12

8.1.1. PNG Reference library

8.2. Data Definitions for libpng12

8.2.1. png.h

8.3. Interface Definitions for libpng12

png_access_version_number -- return version of the run-time library

png_check_sig -- INSERT PURPOSE HERE

png_convert_from_struct_tm -- convert struct tm to png_time

png_convert_from_time_t -- convert time_t to png_time

png_create_info_struct -- allocate and initialize a png_info structure

png_create_read_struct -- allocate and initialize a png_struct structure for reading PNG file

png_create_read_struct_2 -- register custom read function

png_create_write_struct -- allocate and initialize a png_struct structure for writing PNG file

png_create_write_struct_2 -- register custom write function

png_data_freer -- change the default behavior for freeing data

png_destroy_info_struct -- free memory in PNG info structure

png_destroy_read_struct -- free the memory associated with read png_struct

png_destroy_write_struct -- free the memory associated with write png_struct

png_error -- default function to handle fatal errors

png_free -- free a pointer allocated by png_malloc()

png_free_data -- free internally allocated data

png_get_IHDR -- get PNG_IHDR chunk information from png_info structure

png_get_PLTE -- get image palette information from png_info structure

png_get_bKGD -- get background color for given image

png_get_bit_depth -- return image bit_depth

png_get_cHRM -- get CIE chromacities and referenced white point for given image

png_get_channels -- get number of color channels in image

png_get_color_type -- return image color type

png_get_error_ptr -- return error_ptr for user-defined functions

png_get_gAMA -- get the gamma value for given image

png_get_hIST -- get the histogram for given image

png_get_header_ver -- get version information for libpng header files

png_get_iCCP -- get the embedded ICC profile data for given image

png_get_image_height -- return image height

png_get_image_width -- return image width

png_get_interlace_type -- returns interlace method

png_get_io_ptr -- return pointer for user-defined I/O

png_get_libpng_ver -- get the library version string

png_get_oFFs -- get screen offsets for the given image

png_get_pHYs -- get the physical resolution for given image

png_get_progressive_ptr -- return pointer to user-defined push read functions

png_get_rowbytes -- Return number of bytes for a row

png_get_rows -- retrieve image data from png_info structure

png_get_sBIT -- get number of significant bits for each color channel

png_get_sRGB -- get the rendering intent for given image

png_get_tIME -- get last modification time for the image

png_get_tRNS -- get transparency data for images
png_get_text -- get comments information from png_info structure
png_get_unknown_chunks -- retrieve the unknown chunks from a PNG file
png_get_user_chunk_ptr -- get pointer to user chunk data
png_get_valid -- determine if given chunk data is valid
png_get_x_offset_pixels -- return x offset in pixels from oFFs chunk
png_get_x_pixels_per_meter -- return horizontal pixel density per meter
png_get_y_offset_pixels -- return y offset in pixels from oFFs chunk
png_get_y_pixels_per_meter -- return vertical pixel density per meter
png_info_init_3 -- initialize an info structure (DEPRECATED)
png_init_io -- initialize input/output for the PNG file
png_libpng_ver -- external variable holding version number of libpng
png_malloc -- allocate memory
png_permit_mng_features -- enable MNG extensions for PNG image wrapped in MNG datastream
png_process_data -- read PNG file progressively
png_progressive_combine_row -- combines current row data with processed row
png_read_end -- read the end of PNG file
png_read_image -- read the entire image into memory
png_read_info -- read the PNG image information
png_read_png -- read the entire PNG file
png_read_row -- read a row of image data
png_read_rows -- read multiple rows of image data
png_read_update_info -- update png_info structure
png_set_IHDR -- set the PNG_IHDR chunk information
png_set_PLTE -- set color values for the palette
png_set_bKGD -- set the background color for given image
png_set_background -- set the background for given image
png_set_bgr -- set pixel order to blue, green, red
png_set_chRM -- set CIE chromacities and referenced white point for given image
png_set_compression_buffer_size -- set the size of the compression buffer
png_set_compression_level -- set image compression level
png_set_compression_mem_level -- set how much memory to use for the internal state during PNG compression
png_set_compression_method -- set PNG compression algorithm
png_set_compression_strategy -- set PNG compression strategy
png_set_compression_window_bits -- set PNG compression window size
png_set_dither -- turn on dithering to 8-bit
png_set_error_fn -- set user defined functions for error handling
png_set_expand -- set expansion transformation
png_set_filler -- add a filler byte to given image
png_set_filter -- set filtering method
png_set_gAMA -- set the gamma value for given image
png_set_gamma -- transform the image from file gamma to screen gamma
png_set_gray_1_2_4_to_8 -- set expansion transformation
png_set_gray_to_rgb -- expand the grayscale image to 24-bit RGB
png_set_hIST -- set the histogram of color palette
png_set_iCCP -- set ICC component
png_set_interlace_handling -- get the number of passes for image interlacing
png_set_invert_alpha -- invert the level of opacity of a PNG file
png_set_invert_mono -- reverse values for monochromaticity

Linux Standard Base Desktop Specification 4.1

png_set_keep_unknown_chunks -- specify list of chunks and how to handle them
png_set_mem_fn -- install custom memory allocation functions
png_set_oFFs -- set screen offsets for given image
png_set_pHYs -- set physical resolution
png_set_packing -- expand image to 1 pixel per byte for bit-depths 1,2 and 4
png_set_packswap -- swap the order of pixels for packed-pixel image
png_set_palette_to_rgb -- set expansion transformation
png_set_progressive_read_fn -- set progressive read callback functions
png_set_read_fn -- set user-defined function for reading a PNG stream
png_set_read_user_chunk_fn -- install custom callback function to handle unknown chunks in the input stream
png_set_read_user_transform_fn -- install a custom input transformation callback function
png_set_rgb_to_gray -- reduce 24-bit RGB to grayscale image
png_set_rows -- put image data in png_info structure
png_set_sBIT -- set number of significant bits for each channel
png_set_sRGB -- set the rendering intent for given image
png_set_sRGB_gAMA_and_cHRM -- set rendering intent, gamma values, and CIE chromaticities of a PNG file
png_set_shift -- shift pixel values to valid bit-depth
png_set_sig_bytes -- number of bytes read from PNG file
png_set_strip_16 -- strip 16 bit PNG file to 8 bit depth
png_set_strip_alpha -- remove alpha channel on the given image
png_set_swap -- swap byte-order for 16 bit depth files
png_set_swap_alpha -- swap image data from RGBA to ARGB format
png_set_tIME -- set last modification time for the image
png_set_tRNS -- set transparency values for images
png_set_tRNS_to_alpha -- set expansion transformation
png_set_text -- stores information for image comments
png_set_unknown_chunk_location -- set the location of an unknown chunk in a PNG file
png_set_unknown_chunks -- insert unknown chunks into a PNG file
png_set_write_fn -- set user-defined function for writing a PNG stream
png_set_write_status_fn -- install custom callback function to be called after row is written
png_set_write_user_transform_fn -- install a custom output transformation callback function
png_sig_cmp -- match the PNG signature
png_start_read_image -- start reading a PNG file
png_warning -- default function to handle non-fatal errors
png_write_chunk -- write a PNG chunk
png_write_end -- write the end of a PNG file
png_write_flush -- flush the current output buffers
png_write_image -- write the given image data
png_write_info -- write PNG information to file
png_write_png -- write the entire PNG file
png_write_row -- write a row of image data
png_write_rows -- write multiple rows of image data

Chapter 8. Libraries

8.1. Interfaces for libpng12

Table 8-1 defines the library name and shared object name for the libpng12 library

Table 8-1. libpng12 Definition

Library:	libpng12
SONAME:	libpng12.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

8.1.1. PNG Reference library

8.1.1.1. Interfaces for PNG Reference library

An LSB conforming implementation shall provide the generic functions for PNG Reference library specified in Table 8-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 8-2. libpng12 - PNG Reference library Function Interfaces

An LSB conforming implementation shall provide the generic data interfaces for PNG Reference library specified in [Table 8-3](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 8-3. libpng12 - PNG Reference library Data Interfaces

png_libpng_ver(PNG12_0) [LSB]		

8.2. Data Definitions for libpng12

This section defines global identifiers and their values that are associated with interfaces contained in libpng12. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

8.3. Interface Definitions for libpng12

Table of Contents

png_access_version_number -- return version of the run-time library

png_check_sig -- INSERT PURPOSE HERE

png_convert_from_struct_tm -- convert struct tm to png_time

png_convert_from_time_t -- convert time_t to png_time

png_create_info_struct -- allocate and initialize a png_info structure

png_create_read_struct -- allocate and initialize a png_struct structure for reading PNG file
png_create_read_struct_2 -- register custom read function
png_create_write_struct -- allocate and initialize a png_struct structure for writing PNG file
png_create_write_struct_2 -- register custom write function
png_data_freer -- change the default behavior for freeing data
png_destroy_info_struct -- free memory in PNG info structure
png_destroy_read_struct -- free the memory associated with read png_struct
png_destroy_write_struct -- free the memory associated with write png_struct
png_error -- default function to handle fatal errors
png_free -- free a pointer allocated by png_malloc()
png_free_data -- free internally allocated data
png_get_IHDR -- get PNG_IHDR chunk information from png_info structure
png_get_PLTE -- get image palette information from png_info structure
png_get_bKGD -- get background color for given image
png_get_bit_depth -- return image bit_depth
png_get_cHRM -- get CIE chromacities and referenced white point for given image
png_get_channels -- get number of color channels in image
png_get_color_type -- return image color type
png_get_error_ptr -- return error_ptr for user-defined functions
png_get_gAMA -- get the gamma value for given image
png_get_hIST -- get the histogram for given image
png_get_header_ver -- get version information for libpng header files
png_get_iCCP -- get the embedded ICC profile data for given image
png_get_image_height -- return image height
png_get_image_width -- return image width
png_get_interlace_type -- returns interlace method
png_get_io_ptr -- return pointer for user-defined I/O
png_get_libpng_ver -- get the library version string
png_get_oFFs -- get screen offsets for the given image
png_get_pHYs -- get the physical resolution for given image
png_get_progressive_ptr -- return pointer to user-defined push read functions
png_get_rowbytes -- Return number of bytes for a row
png_get_rows -- retrieve image data from png_info structure
png_get_sBIT -- get number of significant bits for each color channel
png_get_sRGB -- get the rendering intent for given image
png_get_tIME -- get last modification time for the image
png_get_tRNS -- get transparency data for images
png_get_text -- get comments information from png_info structure
png_get_unknown_chunks -- retrieve the unknown chunks from a PNG file
png_get_user_chunk_ptr -- get pointer to user chunk data
png_get_valid -- determine if given chunk data is valid
png_get_x_offset_pixels -- return x offset in pixels from oFFs chunk
png_get_x_pixels_per_meter -- return horizontal pixel density per meter
png_get_y_offset_pixels -- return y offset in pixels from oFFs chunk
png_get_y_pixels_per_meter -- return vertical pixel density per meter
png_info_init_3 -- initialize an info structure (DEPRECATED)
png_init_io -- initialize input/output for the PNG file
png_libpng_ver -- external variable holding version number of libpng
png_malloc -- allocate memory
png_permit_mng_features -- enable MNG extensions for PNG image wrapped in MNG datastream
png_process_data -- read PNG file progressively

png_progressive_combine_row -- combines current row data with processed row
png_read_end -- read the end of PNG file
png_read_image -- read the entire image into memory
png_read_info -- read the PNG image information
png_read_png -- read the entire PNG file
png_read_row -- read a row of image data
png_read_rows -- read multiple rows of image data
png_read_update_info -- update png_info structure
png_set_IHDR -- set the PNG_IHDR chunk information
png_set_PLTE -- set color values for the palette
png_set_bKGD -- set the background color for given image
png_set_background -- set the background for given image
png_set_bgr -- set pixel order to blue, green, red
png_set_cHRM -- set CIE chromacities and referenced white point for given image
png_set_compression_buffer_size -- set the size of the compression buffer
png_set_compression_level -- set image compression level
png_set_compression_mem_level -- set how much memory to use for the internal state during PNG compression
png_set_compression_method -- set PNG compression algorithm
png_set_compression_strategy -- set PNG compression strategy
png_set_compression_window_bits -- set PNG compression window size
png_set_dither -- turn on dithering to 8-bit
png_set_error_fn -- set user defined functions for error handling
png_set_expand -- set expansion transformation
png_set_filler -- add a filler byte to given image
png_set_filter -- set filtering method
png_set_gAMA -- set the gamma value for given image
png_set_gamma -- transform the image from file gamma to screen gamma
png_set_gray_1_2_4_to_8 -- set expansion transformation
png_set_gray_to_rgb -- expand the grayscale image to 24-bit RGB
png_set_hIST -- set the histogram of color palette
png_set_iCCP -- set ICC component
png_set_interlace_handling -- get the number of passes for image interlacing
png_set_invert_alpha -- invert the level of opacity of a PNG file
png_set_invert_mono -- reverse values for monochromaticity
png_set_keep_unknown_chunks -- specify list of chunks and how to handle them
png_set_mem_fn -- install custom memory allocation functions
png_set_oFFs -- set screen offsets for given image
png_set_pHYs -- set physical resolution
png_set_packing -- expand image to 1 pixel per byte for bit-depths 1,2 and 4
png_set_packswap -- swap the order of pixels for packed-pixel image
png_set_palette_to_rgb -- set expansion transformation
png_set_progressive_read_fn -- set progressive read callback functions
png_set_read_fn -- set user-defined function for reading a PNG stream
png_set_read_user_chunk_fn -- install custom callback function to handle unknown chunks in the input stream
png_set_read_user_transform_fn -- install a custom input transformation callback function
png_set_rgb_to_gray -- reduce 24-bit RGB to grayscale image
png_set_rows -- put image data in png_info structure
png_set_sBIT -- set number of significant bits for each channel
png_set_sRGB -- set the rendering intent for given image

png_set_sRGB_gAMA_and_chRM -- set rendering intent, gamma values, and CIE chromaticities of a PNG file
png_set_shift -- shift pixel values to valid bit-depth
png_set_sig_bytes -- number of bytes read from PNG file
png_set_strip_16 -- strip 16 bit PNG file to 8 bit depth
png_set_strip_alpha -- remove alpha channel on the given image
png_set_swap -- swap byte-order for 16 bit depth files
png_set_swap_alpha -- swap image data from RGBA to ARGB format
png_set_tIME -- set last modification time for the image
png_set_tRNS -- set transparency values for images
png_set_tRNS_to_alpha -- set expansion transformation
png_set_text -- stores information for image comments
png_set_unknown_chunk_location -- set the location of an unknown chunk in a PNG file
png_set_unknown_chunks -- insert unknown chunks into a PNG file
png_set_write_fn -- set user-defined function for writing a PNG stream
png_set_write_status_fn -- install custom callback function to be called after row is written
png_set_write_user_transform_fn -- install a custom output transformation callback function
png_sig_cmp -- match the PNG signature
png_start_read_image -- start reading a PNG file
png_warning -- default function to handle non-fatal errors
png_write_chunk -- write a PNG chunk
png_write_end -- write the end of a PNG file
png_write_flush -- flush the current output buffers
png_write_image -- write the given image data
png_write_info -- write PNG information to file
png_write_png -- write the entire PNG file
png_write_row -- write a row of image data
png_write_rows -- write multiple rows of image data

The interfaces defined on the following pages are included in libpng12 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 8.1](#) shall behave as described in the referenced base document.

png_access_version_number

Name

png_access_version_number -- return version of the run-time library

Synopsis

```
#include <png.h>
png_uint_32 png_access_version_number(void);
```

Description

png_access_version_number() returns version of the libpng12 library available at run-time.

Return Value

png_access_version_number() returns integer constructed from the major version, minor version with leading zero and leading number with leading zero. For example, the version number for version 1.2.8 is 10208.

png_check_sig

Name

png_check_sig -- INSERT PURPOSE HERE

Synopsis

```
#include <png.h>
int png_check_sig(png_bytep arg0, int arg1);
```

Description

INSERT TEXT HERE

Return Value

INSERT TEXT HERE

Errors

INSERT TEXT HERE

png_convert_from_struct_tm

Name

png_convert_from_struct_tm -- convert struct tm to png_time

Synopsis

```
#include <png.h>
void png_convert_from_struct_tm(png_timep ptime, struct tm * ttime);
```

Description

This interface shall convert from the struct tm time format to the png_time format.

The parameter *ttime* shall specify the struct tm value to convert to png_time format.

The output parameter *ptime* shall contain the converted value.

png_convert_from_time_t

Name

png_convert_from_time_t -- convert time_t to png_time

Synopsis

```
#include <png.h>
void png_convert_from_time_t(png_timep ptime, time_t ttime);
```

Description

This interface shall convert from the time_t time format to the png_time format.

The parameter *ttime* shall specify the time_t value to convert to png_time format.

The output parameter *ptime* shall contain the converted value.

png_create_info_struct

Name

png_create_info_struct -- allocate and initialize a png_info structure

Synopsis

```
#include <png.h>
png_infop png_create_info_struct(png_structp png_ptr);
```

Description

png_create_info_struct() shall allocate and initialize a png_info structure.

Return Value

Returns the pointer to png_info structure. Returns NULL if it fails to create the structure.

Errors

png_create_info_struct() shall return NULL if the allocation fails. The application should check for the return value.

png_create_read_struct

Name

png_create_read_struct -- allocate and initialize a png_struct structure for reading PNG file

Synopsis

```
#include <png.h>

png_structp png_create_read_struct(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn);
```

Description

png_create_read_struct() shall allocate and initialize a png_struct structure. The function shall return NULL if the allocation fails. The application should check for the return value. For handling errors and warnings, the application can pass desired error handling routines as arguments to png_create_read_struct(). Otherwise, the default error handling uses stderr and longjmp. The error handling routine must NOT return to the calling routine.

<i>user_png_ver</i>	version string of the library. Must be PNG_LIBPNG_VER_STRING
<i>error_ptr</i>	user defined struct for error functions.
<i>error_fn</i>	user defined function for printing errors and aborting.
<i>warn_fn</i>	user defined function for warnings.

Return Value

Returns the pointer to png_struct structure. Returns NULL if it fails to create the structure.

Errors

png_create_read_struct() shall return NULL if the allocation fails. The application should check for the return value.

png_create_read_struct_2

Name

png_create_read_struct_2 -- register custom read function

Synopsis

```
#include <png.h>

png_structp png_create_read_struct_2(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn,
png_voidp mem_ptr, png_malloc_ptr malloc_fn, png_free_ptr free_fn);
```

Description

This interface shall register a custom read function and allocate and initialize a `png_struct` structure. For handling errors and warnings, as well as allocating and deallocating memory, the application can pass functions as arguments. Otherwise, the default error handling functions `stderr` and `longjmp()` will be used. The error handling routine must not return to the calling routine.

The parameter *user_png_ver* shall specify the version string of the library, which must be `PNG_LIBPNG_VER_STRING`.

The parameter *error_ptr* shall specify a user-defined structure for error functions.

The parameter *error_fn* shall specify an optional user-defined function for printing errors and aborting.

The parameter *warn_fn* shall specify an optional user-defined function for warnings.

The parameter *mem_ptr* shall specify the memory to allocate.

The parameter *malloc_fn* shall specify an optional user-defined memory allocation function.

The parameter *free_fn* shall specify an optional user-defined memory deallocation function.

Application Usage (informative)

You should define `PNG_USER_MEM_SUPPORTED` before you call `png_create_read_struct2()`.

png_create_write_struct

Name

png_create_write_struct -- allocate and initialize a png_struct structure for writing PNG file

Synopsis

```
#include <png.h>

png_structp png_create_write_struct(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn);
```

Description

png_create_write_struct() shall allocate and initialize a png_struct structure. The function shall return NULL if the allocation fails. The application should check for the return value.

<i>user_png_ver</i>	version string of the library. Must be PNG_LIBPNG_VER_STRING
<i>error_ptr</i>	user defined struct for error functions.
<i>error_fn</i>	user defined function for printing errors and aborting.
<i>warn_fn</i>	user defined function for warnings.

Return Value

Returns the pointer to png_struct structure. Returns NULL if it fails to create the structure.

png_create_write_struct_2

Name

png_create_write_struct_2 -- register custom write function

Synopsis

```
#include <png.h>

png_structp png_create_write_struct_2(png_const_charp user_png_ver,
png_voidp error_ptr, png_error_ptr error_fn, png_error_ptr warn_fn,
png_voidp mem_ptr, png_malloc_ptr malloc_fn, png_free_ptr free_fn);
```

Description

This interface shall register a custom write function and allocate and initialize a `png_struct` structure. For handling errors and warnings, as well as allocating and deallocating memory, the application can pass functions as arguments. Otherwise, the default error handling functions `stderr` and `longjmp()` will be used. The error handling routine must not return to the calling routine.

The parameter *user_png_ver* shall specify the version string of the library, which must be `PNG_LIBPNG_VER_STRING`.

The parameter *error_ptr* shall specify a user-defined structure for error functions.

The parameter *error_fn* shall specify an optional user-defined function for printing errors and aborting.

The parameter *warn_fn* shall specify an optional user-defined function for warnings.

The parameter *mem_ptr* shall specify the memory to allocate.

The parameter *malloc_fn* shall specify an optional user-defined memory allocation function.

The parameter *free_fn* shall specify an optional user-defined memory deallocation function.

Return Value

On success, returns a pointer to the `png_struct` that was created.

On failure, returns `NULL`.

png_data_freer

Name

`png_data_freer` -- change the default behavior for freeing data

Synopsis

```
#include <png.h>

void png_data_freer(png_structp png_ptr, png_infop info_ptr, int freer,
png_uint_32 mask);
```

Description

This interface shall change the default behavior for freeing allocated data, from only freeing data allocated internally by libpng, to either freeing user-allocated data or to not freeing any data at all.

This interface can enable deallocation of user data allocated with `png_malloc()` or `png_zalloc()` and passed to libpng with one of the `png_set_*`() interfaces. Users can call it both before and after passing the data. Calling it after reading PNG data but before passing the data controls whether the user or the interface is responsible for the existing data. Calling it after passing the data controls whether the user or the interface should deallocate the data.

If the user becomes responsible for data allocated by libpng, `png_free()` must be called to free it. If libpng becomes responsible for user-allocated data, the data must only have been allocated with `png_malloc()` or `png_zalloc()`.

The parameter `png_ptr` shall specify the PNG file.

The parameter `info_ptr` shall specify the PNG info structure.

The parameter `freer` shall specify one of these constants: `PNG_DESTROY_WILL_FREE_DATA`, `PNG_SET_WILL_FREE_DATA`, `PNG_USER_WILL_FREE_DATA`.

The parameter `mask` shall specify the data to free, as described under `png_free_data()`.

Application Usage (informative)

A `row_pointers` array allocated in a single block must not be freed with `png_set_rows()` or `png_read_destroy()`, because they would attempt to free the elements of the array as well.

Do not free `text_ptr` with libpng if some of its members were allocated separately, because this will actually only free `text_ptr.key`. If responsibility for freeing `text_ptr` moves from libpng to the user, the user must not free the members separately.

png_destroy_info_struct

Name

png_destroy_info_struct -- free memory in PNG info structure

Synopsis

```
#include <png.h>

void png_destroy_info_struct(png_structp png_ptr, png_infopp
info_ptr_ptr);
```

Description

This interface shall free any memory in a single PNG info structure.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr_ptr* shall point to a pointer to the png_info_struct to destroy.

png_destroy_read_struct

Name

png_destroy_read_struct -- free the memory associated with read png_struct

Synopsis

```
#include <png.h>

void png_destroy_read_struct(png_structpp png_ptr_ptr, png_infopp
info_ptr_ptr, png_infopp end_info_ptr_ptr);
```

Description

png_destroy_read_struct() frees the memory associated with the read png_struct struct that holds information from the given PNG file, the associated png_info struct for holding the image information and png_info struct for holding the information at end of the given PNG file.

png_destroy_write_struct

Name

png_destroy_write_struct -- free the memory associated with write png_struct

Synopsis

```
#include <png.h>

void png_destroy_write_struct(png_structpp png_ptr_ptr, png_infopp
info_ptr_ptr);
```

Description

png_destroy_write_struct() frees the memory associated with the write png_struct struct that holds information for writing the PNG file and the associated png_info struct for holding the image information.

png_error

Name

png_error -- default function to handle fatal errors

Synopsis

```
#include <png.h>
void png_error(png_structp png_ptr, png_const_charp error_message);
```

Description

png_error() is the default error handling function for fatal errors. The default error handling functionality may be changed by using png_set_error_fn() to replace the error function at run-time.

Return Value

Errors

png_free

Name

png_free -- free a pointer allocated by png_malloc()

Synopsis

```
#include <png.h>
void png_free(png_structp png_ptr, png_voidp ptr);
```

Description

png_free() shall free memory pointed to by "ptr" previously allocated by png_malloc().

png_free_data

Name

png_free_data -- free internally allocated data

Synopsis

```
#include <png.h>

void png_free_data(png_structp png_ptr, png_infop info_ptr, png_uint_32
free_me, int num);
```

Description

This interface shall free data that was internally allocated by libpng.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr* shall specify the PNG info structure containing members to free that are pointing to memory allocated by libpng.

The parameter *mask* shall specify the data to free with a mask consisting of the logical OR of at least one of the following constants: PNG_FREE_HIST, PNG_FREE_ICCP, PNG_FREE_PCAL, PNG_FREE_PLTE, PNG_FREE_ROWS, PNG_FREE_SCAL, PNG_FREE_SPLT, PNG_FREE_TEXT, PNG_FREE_TRNS, PNG_FREE_UNKN. (To specify all constants, use PNG_FREE_ALL.)

The parameter *num* shall specify the sequence number of the item to free. The value -1 specifies all items.

png_get_IHDR

Name

png_get_IHDR -- get PNG_IHDR chunk information from png_info structure

Synopsis

```
#include <png.h>

png_uint_32 png_get_IHDR(png_structp png_ptr, png_infop info_ptr,
png_uint_32 * width, png_uint_32 * height, int * bit_depth, int *
color_type, int * interlace_method, int * compression_method, int *
filter_method);
```

Description

png_get_IHDR() gets PNG_IHDR chunk type information from png_info structure.

<i>width</i>	holds the width of the image in pixels up to 2 ³¹ .
<i>height</i>	holds the height of the image in pixels up to 2 ³¹ .
<i>bit_depth</i>	holds the bit depth of one of the image channels. Valid values are 1, 2, 4, 8, 16 and also depend on the color_type.
<i>color_type</i>	describes which color/alpha channels are present. Supported color types shall include: PNG_COLOR_TYPE_GRAY (bit depths 1, 2, 4, 8, 16) PNG_COLOR_TYPE_GRAY_ALPHA (bit depths 8, 16) PNG_COLOR_TYPE_PALETTE (bit depths 1, 2, 4, 8) PNG_COLOR_TYPE_RGB (bit_depths 8, 16) PNG_COLOR_TYPE_RGB_ALPHA (bit_depths 8, 16) PNG_COLOR_MASK_PALETTE PNG_COLOR_MASK_COLOR PNG_COLOR_MASK_ALPHA
<i>filter_method</i>	holds the filter method. If this argument is NULL, the filter method will not be retrieved. Valid values after retrieval are PNG_FILTER_TYPE_BASE PNG_INTRAPIXEL_DIFFERENCING
<i>compression_method</i>	holds the compression method. If this argument is NULL, the compression method will not be retrieved. Valid values after retrieval are PNG_COMPRESSION_TYPE_BASE

interlace_method holds the interlace method. If this argument is NULL, the interlacing method will not be retrieved. Valid values after retrieval are

PNG_INTERLACE_NONE
PNG_INTERLACE_ADAM7

Return Value

On success, `png_get_HDR()` shall return 1. Otherwise, `png_get_IHDR()` shall return 0.

png_get_PLTE

Name

png_get_PLTE -- get image palette information from png_info structure

Synopsis

```
#include <png.h>
png_uint_32 png_get_PLTE(png_structp png_ptr, png_infop info_ptr,
png_colorp * palette, int * num_palette);
```

Description

png_get_PLTE() gets palette information from png_info structure. "palette" holds an array of color values with "num_palette" entries.

Return Value

On successful retrieval of palette information, png_get_PLTE() shall return PNG_INFO_PLTE. Otherwise, png_get_PLTE() shall return 0.

png_get_bKGD

Name

png_get_bKGD -- get background color for given image

Synopsis

```
#include <png.h>
png_uint_32 png_get_bKGD(png_structp png_ptr, png_infop info_ptr,
png_color_16p * background);
```

Description

png_get_bKGD() shall return the background color to "background" if the validity flag for background is set.

Return Value

On success, png_get_bKGD() shall return PNG_INFO_bKGD. Otherwise, png_get_bKGD() shall return 0.

png_get_bit_depth

Name

png_get_bit_depth -- return image bit_depth

Synopsis

```
#include <png.h>
png_byte png_get_bit_depth(png_structp png_ptr, png_infop info_ptr);
```

Description

Returns the image bit_depth.

Return Value

Returns 0 if *png_ptr* or *info_ptr* is NULL, bit_depth otherwise.

png_get_cHRM

Name

png_get_cHRM -- get CIE chromacities and referenced white point for given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_cHRM(png_structp png_ptr, png_infop info_ptr, double
* white_x, double * white_y, double * red_x, double * red_y, double *
green_x, double * green_y, double * blue_x, double * blue_y);
```

Description

png_get_cHRM() shall return the CIE x,y chromaticities of the red, green and blue display primaries used in the image and the referenced white point from the cHRM chunk in the image.

Return Value

On success, png_get_cHRM() shall return PNG_INFO_cHRM. Otherwise, the function shall return 0.

png_get_channels

Name

png_get_channels -- get number of color channels in image

Synopsis

```
#include <png.h>
png_byte png_get_channels(png_structp png_ptr, png_infop info_ptr);
```

Description

png_get_channels() shall return the number of data channels per pixel for the color type of the image. The number of channels shall range from 1-4 depending on the color type as given below.

- 1 - PNG_COLOR_TYPE_GRAY or PNG_COLOR_TYPE_PALETTE
- 2 - PNG_COLOR_TYPE_GRAY_ALPHA
- 3 - PNG_COLOR_TYPE_RGB
- 4 - PNG_COLOR_TYPE_RGB_ALPHA or PNG_COLOR_TYPE_RGB+filler byte

Return Value

On success, png_get_channels() shall return the number of channels ranging from 1-4. Otherwise, png_get_channels shall return 0.

png_get_color_type

Name

png_get_color_type -- return image color type

Synopsis

```
#include <png.h>
png_byte png_get_color_type(png_structp png_ptr, png_infop info_ptr);
```

Description

Returns the image color type.

Return Value

Returns 0 if png_ptr or info_ptr is NULL, color_type otherwise.

png_get_error_ptr

Name

png_get_error_ptr -- return error_ptr for user-defined functions

Synopsis

```
#include <png.h>
png_voidp png_get_error_ptr(png_structp png_ptr);
```

Description

png_get_error_ptr() returns the error_ptr associated with user-defined functions.

Return Value

Returns error_ptr

png_get_gAMA

Name

png_get_gAMA -- get the gamma value for given image

Synopsis

```
#include <png.h>
png_uint_32 png_get_gAMA(png_structp png_ptr, png_infop info_ptr, double
* file_gamma);
```

Description

Returns the gamma value of an image to "file_gamma" if the gAMA chunk information is valid for the image.

Return Value

PNG_INFO_gAMA - if png_ptr, info_ptr, file_gamma are not NULL and gAMA chunk information is valid 0
- otherwise.

png_get_hIST

Name

png_get_hIST -- get the histogram for given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_hIST(png_structp png_ptr, png_infop info_ptr,
png_uint_16p * hist);
```

Description

Returns the histogram of an image to **hist* if the hIST chunk information is valid for the image.

Return Value

PNG_INFO_hIST - if *png_ptr*, *info_ptr*, *hist* are not NULL and hIST chunk information is valid 0 - otherwise.

png_get_header_ver

Name

png_get_header_ver -- get version information for libpng header files

Synopsis

```
#include <png.h>
png_charp png_get_header_ver(png_structp png_ptr);
```

Description

This interface shall return the version of the header files used when building libpng as a short string in the format "1.0.0" through "99.99.99zz".

png_get_iCCP

Name

png_get_iCCP -- get the embedded ICC profile data for given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_iCCP(png_structp png_ptr, png_info_ptr info_ptr,
png_charpp name, int * compression_type, png_charpp profile, png_uint_32
* proflen);
```

Description

png_get_iCCP() shall return the embedded ICC profile data in iCCP chunk. "name" shall contain the profile name, *compression_type shall contain the compression type, profile shall contain the International Color Consortium color profile data and *proflen shall contain the length of the profile data in bytes. *compression_type must always be set to PNG_COMPRESSION_TYPE_BASE.

Return Value

On success, png_get_iCCP() shall return PNG_INFO_iCCP. Otherwise, the function shall return 0.

png_get_image_height

Name

png_get_image_height -- return image height

Synopsis

```
#include <png.h>
png_uint_32 png_get_image_height(png_structp png_ptr, png_infop
info_ptr);
```

Description

png_get_image_height() returns the image height in pixels.

Return Value

Returns 0 if *png_ptr* or *info_ptr* is NULL, *image_height* otherwise.

png_get_image_width

Name

png_get_image_width -- return image width

Synopsis

```
#include <png.h>
png_uint_32 png_get_image_width(png_structp png_ptr, png_infop info_ptr);
```

Description

png_get_image_width() returns the image width in pixels.

Return Value

Returns 0 if *png_ptr* or *info_ptr* is NULL, *image_width* otherwise.

png_get_interlace_type

Name

png_get_interlace_type -- returns interlace method

Synopsis

```
#include <png.h>
png_byte png_get_interlace_type(png_structp png_ptr, png_info_ptr info_ptr);
```

Description

png_get_interlace_type() returns the interlace method used for the image.

Return Value

Valid values are PNG_INTERLACE_NONE, PNG_INTERLACE_ADAM7. Returns 0 if png_ptr or info_ptr is NULL.

png_get_io_ptr

Name

png_get_io_ptr -- return pointer for user-defined I/O

Synopsis

```
#include <png.h>
png_voidp png_get_io_ptr(png_structp png_ptr);
```

Description

Returns the pointer associated with user-defined input-output functions.

png_get_libpng_ver

Name

png_get_libpng_ver -- get the library version string

Synopsis

```
#include <png.h>
png_charp png_get_libpng_ver(png_structp png_ptr);
```

Description

png_get_libpng_ver() shall return the library version as a short string in the format "1.0.0" through "99.99.99zz".

png_get_oFFs

Name

png_get_oFFs -- get screen offsets for the given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_oFFs(png_structp png_ptr, png_infop info_ptr,
png_int_32 * x_offset, png_int_32 * y_offset, int * unit_type);
```

Description

png_get_oFFs() shall read the positive offset from the left edge of the screen from info_ptr to x_offset and the positive offset from the top edge of the screen to y_offset. The unit type shall be returned in unit_type, which can take the following values

PNG_OFFSET_PIXEL
PNG_OFFSET_MICROMETER

Return Value

On success, png_get_oFFs() shall return PNG_INFO_oFFs. Otherwise, png_get_oFFs() shall return 0.

png_get_pHYs

Name

png_get_pHYs -- get the physical resolution for given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_pHYs(png_structp png_ptr, png_infop info_ptr,
png_uint_32 * res_x, png_uint_32 * res_y, int * unit_type);
```

Description

png_get_pHYs() shall return the physical pixel resolution of the image and the unit of resolution. Upon success, *res_x shall contain the horizontal resolution and *res_y shall contain the vertical resolution in pixels per unit. *unit_type will be set to PNG_RESOLUTION_METER if the resolution is expressed in pixels per meter. Otherwise *unit_type will be PNG_RESOLUTION_UNKNOWN.

Return Value

PNG_INFO_pHYs - on success 0 - otherwise.

png_get_progressive_ptr

Name

png_get_progressive_ptr -- return pointer to user-defined push read functions

Synopsis

```
#include <png.h>
png_voidp png_get_progressive_ptr(png_structp png_ptr);
```

Description

Returns the pointer to user-defined structure containing information about the callback functions.

png_get_rowbytes

Name

png_get_rowbytes -- Return number of bytes for a row

Synopsis

```
#include <png.h>
png_uint_32 png_get_rowbytes(png_structp png_ptr, png_infop info_ptr);
```

Description

png_get_rowbytes() returns the number of bytes needed to hold a transformed row of an image.

Return Value

Returns 0 if *png_ptr* or *info_ptr* is NULL, number of bytes otherwise.

png_get_rows

Name

png_get_rows -- retrieve image data from png_info structure

Synopsis

```
#include <png.h>
png_bytepp png_get_rows(png_structp png_ptr, png_infop info_ptr);
```

Description

png_get_rows() shall retrieve rows of image data from the *info_ptr* structure in an array of pointers to the pixel data for each row.

Return Value

On success, png_get_rows() shall return an array of pointers to the pixel data for each row of the image.

png_get_sBIT

Name

png_get_sBIT -- get number of significant bits for each color channel

Synopsis

```
#include <png.h>
png_uint_32 png_get_sBIT(png_structp png_ptr, png_infop info_ptr,
png_color_8p * sig_bit);
```

Description

png_get_sBIT() shall return the number of significant bit for each of the gray, red, blue and green color channels.

Return Value

On success, png_get_sBIT() shall return PNG_INFO_sBIT. Otherwise, png_get_sBIT() shall return 0.

png_get_sRGB

Name

png_get_sRGB -- get the rendering intent for given image

Synopsis

```
#include <png.h>

png_uint_32 png_get_sRGB(png_structp png_ptr, png_infop info_ptr, int *  
srgb_intent);
```

Description

png_get_sRGB() shall return the rendering intent of an image to *srgb_intent if the sRGB chunk information is valid for the image.

Return Value

PNG_INFO_sRGB - if png_ptr, info_ptr, srgb_intent are not NULL and sRGB chunk information is valid 0 - otherwise.

png_get_tIME

Name

png_get_tIME -- get last modification time for the image

Synopsis

```
#include <png.h>

png_uint_32 png_get_tIME(png_structp png_ptr, png_infop info_ptr,
png_timep * mod_time);
```

Description

png_get_tIME() shall return the time of last modification of the image if the tIME information is valid for the image.

Return Value

PNG_INFO_tIME - if *png_ptr*, *info_ptr*, *mod_time* are not NULL and tIME information is valid 0 - otherwise.

png_get_tRNS

Name

png_get_tRNS -- get transparency data for images

Synopsis

```
#include <png.h>

png_uint_32 png_get_tRNS(png_structp png_ptr, png_infop info_ptr,
png_bytep * trans, int * num_trans, png_color_16p * trans_values);
```

Description

png_get_tRNS() shall obtain the transparency data for paletted images and image types that don't need a full alpha channel from info_ptr. For a paletted image, the function retrieves the transparency values stored in the same order as the palette colors, starting from index 0. For non-paletted images, the function retrieves the single color value which is treated as fully transparent. If the transparency information is valid, i.e. PNG_INFO_tRNS bit is set for info_ptr->valid: *trans shall be set to the transparency values for a paletted image. Values for the data shall be in range [0,255], ranging from fully transparent to fully opaque, respectively. *num_trans shall be set to the number of transparency values *trans_values shall be set to the single color value specified for non-paletted images.

Return Value

Returns PNG_INFO_tRNS on successful return, 0 otherwise.

png_get_text

Name

png_get_text -- get comments information from png_info structure

Synopsis

```
#include <png.h>

png_uint_32 png_get_text(png_structp png_ptr, png_infop info_ptr,
png_textp * text_ptr, int * num_text);
```

Description

png_get_text() returns the text chunk information from the PNG stream in the array pointed to by *text_ptr*. It also returns the number of text chunks in *num_text*. *text_ptr* is an array of structure png_text whose members include:

compression type of compression used on text. Valid values are:

PNG_TEXT_COMPRESSION_NONE
PNG_TEXT_COMPRESSION_zTXt
PNG_ITXT_COMPRESSION_NONE
PNG_ITXT_COMPRESSION_zTXt

key keyword for comment. Must contain 1-79 characters.

text text comment for current keyword. May be empty.

text_length length of text string after decompression. 0 for iTXt.

Return Value

Returns 0 if *png_ptr* or *info_ptr* is NULL, returns the number of text chunks otherwise.

png_get_unknown_chunks

Name

png_get_unknown_chunks -- retrieve the unknown chunks from a PNG file

Synopsis

```
#include <png.h>

png_uint_32 png_get_unknown_chunks(png_structp png_ptr, png_info_ptr
info_ptr, png_unknown_chunkpp unknowns);
```

Description

This interface shall retrieve the unknown chunks from a PNG file.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr* shall specify the PNG info structure.

The parameter *unknowns* shall specify an array of `png_unknown_chunk` structures containing the unknown chunks. The position of a structure in the array shall correspond to the order in which `png_set_unknown_chunks()` inserted its chunk into the PNG file, or in which it was read.

The `png_unknown_chunkpp` structure shall contain the following members.

name	the name of the chunk
data	the data of the chunk
size	the size of the chunk's data
location	the position of the chunk in the PNG file

Return Value

On success, this interface shall return the number of unknown chunks obtained.

On failure, this interface shall return 0.

png_get_user_chunk_ptr

Name

png_get_user_chunk_ptr -- get pointer to user chunk data

Synopsis

```
#include <png.h>
png_voidp png_get_user_chunk_ptr(png_structp png_ptr);
```

Description

This interface shall return the pointer to the user chunk data associated with the specified PNG file.

The parameter *png_ptr* shall specify the PNG file.

png_get_valid

Name

png_get_valid -- determine if given chunk data is valid

Synopsis

```
#include <png.h>

png_uint_32 png_get_valid(png_structp png_ptr, png_infop info_ptr,
png_uint_32 flag);
```

Description

png_get_valid() shall obtain the validity of chunk data specified by the bits set in "flag". The following bits may be set in flag: PNG_INFO_gAMA PNG_INFO_sBIT PNG_INFO_cHRM PNG_INFO_PLTE PNG_INFO_tRNS PNG_INFO_bKGD PNG_INFO_hIST PNG_INFO_pHYs PNG_INFO_oFFs PNG_INFO_tIME PNG_INFO_pCAL PNG_INFO_sRGB PNG_INFO_iCCP PNG_INFO_sPLT PNG_INFO_sCAL PNG_INFO_IDAT

Return Value

On success, png_get_valid() shall return "flag" with the chunk bits set. Otherwise, png_get_valid() shall return 0.

png_get_x_offset_pixels

Name

png_get_x_offset_pixels -- return x offset in pixels from oFFs chunk

Synopsis

```
#include <png.h>
png_int_32 png_get_x_offset_pixels(png_structp png_ptr, png_info_ptr
info_ptr);
```

Description

png_get_x_offset_pixels() shall obtain x offset in pixels for the image from its PNG_oFFs chunk data stored in info_ptr, if the unit for offset is pixels.

Return Value

On success, png_get_x_offset_pixels() shall return x offset in pixels. Otherwise png_get_x_offset_pixels() shall return 0.

png_get_x_pixels_per_meter

Name

png_get_x_pixels_per_meter -- return horizontal pixel density per meter

Synopsis

```
#include <png.h>

png_uint_32 png_get_x_pixels_per_meter(png_structp png_ptr, png_infop
info_ptr);
```

Description

png_get_x_pixels_per_meter() shall obtain the horizontal pixel density in pixels per meter from its PNG_pHYs chunk data stored in *info_ptr*, if the unit for resolution is pixels per meter.

Return Value

On success, png_get_x_pixels_per_meter() shall return horizontal pixel density in pixels per meter. Otherwise png_get_x_pixels_per_meter() shall return 0.

png_get_y_offset_pixels

Name

png_get_y_offset_pixels -- return y offset in pixels from oFFs chunk

Synopsis

```
#include <png.h>
png_int_32 png_get_y_offset_pixels(png_structp png_ptr, png_info_ptr
info_ptr);
```

Description

png_get_y_offset_pixels() shall obtain y offset in pixels for the image from its PNG_oFFs chunk data stored in info_ptr, if the unit for offset is pixels.

Return Value

On success, png_get_y_offset_pixels() shall return y offset in pixels. Otherwise png_get_y_offset_pixels() shall return 0.

png_get_y_pixels_per_meter

Name

png_get_y_pixels_per_meter -- return vertical pixel density per meter

Synopsis

```
#include <png.h>

png_uint_32 png_get_y_pixels_per_meter(png_structp png_ptr, png_infop
info_ptr);
```

Description

png_get_y_pixels_per_meter() shall obtain the vertical pixel density in pixels per meter from its PNG_pHYs chunk data stored in *info_ptr*, if the unit for resolution is pixels per meter.

Return Value

On success, png_get_y_pixels_per_meter() shall return vertical pixel density in pixels per meter. Otherwise png_get_y_pixels_per_meter() shall return 0.

png_info_init_3

Name

png_info_init_3 -- initialize an info structure (DEPRECATED)

Synopsis

```
#include <png.h>
void png_info_init_3(png_infopp info_ptr, png_size_t
png_info_struct_size);
```

Description

This interface shall initialize a PNG info structure. This interface is deprecated.

The parameter *info_ptr* shall specify the PNG info structure to initialize.

The parameter *png_info_struct_size* shall specify the size of the new structure.

png_init_io

Name

png_init_io -- initialize input/output for the PNG file

Synopsis

```
#include <png.h>
void png_init_io(png_structp png_ptr, png_FILE_p fp);
```

Description

Initialize the default input/output functions for the PNG file to standard C streams. To replace the default read and write functions, use `png_set_read_fn()` and `png_set_write_fn()` respectively.

Return Value

Errors

png_libpng_ver

Name

png_libpng_ver -- external variable holding version number of libpng

Synopsis

```
#include <png.h>
const char png_libpng_ver[18];
```

Description

The external variable `png_libpng_ver` shall contain a character string value indicating the version number of libpng. An LSB conforming implementation shall return a value at least as high as `PNG_LIBPNG_VER_STRING` as defined in this specification.

png_malloc

Name

png_malloc -- allocate memory

Synopsis

```
#include <png.h>
png_voidp png_malloc(png_structp png_ptr, png_uint_32 size);
```

Description

png_malloc() shall return a pointer to allocated memory of the specified size.

Return Value

Pointer to the block of memory allocated.

Errors

Invokes error handling function if the system is out of memory and sets PNG_FLAG_MALLOC_NULL_MEM_OK in member flags of png_struct.

png_permit_mng_features

Name

png_permit_mng_features -- enable MNG extensions for PNG image wrapped in MNG datastream

Synopsis

```
#include <png.h>

png_uint_32 png_permit_mng_features(png_structp png_ptr, png_uint_32
mng_features_permitted);
```

Description

This interface shall enable some MNG extensions for a PNG image wrapped in a MNG datastream.

The parameter *png_ptr* shall specify the PNG image.

The parameter *mng_features_permitted* shall specify the logical OR of the features to be enabled, possibly including PNG_ALL_MNG_FEATURES, PNG_FLAG_MNG_EMPTY_PLTE, and PNG_FLAG_MNG_FILTER_64.

Return Value

This interface shall return the logical AND of the parameter *mng_features_permitted* with the set of MNG features supported by the local version of libpng.

Application Usage (informational)

This interface may not read or write a standalone PNG file; the PNG datastream must be embedded in a MNG datastream with an 8-byte MNG signature and MEND and MHDR chunks.

png_process_data

Name

png_process_data -- read PNG file progressively

Synopsis

```
#include <png.h>

void png_process_data(png_structp png_ptr, png_infop info_ptr, png_bytep
buffer, png_size_t length);
```

Description

png_process_data() shall process data progressively from the PNG stream using callback functions set within png_set_progressive_read_fn(). The data is passed in "buffer" and length of data to be processed is specified by "length".

png_progressive_combine_row

Name

png_progressive_combine_row -- combines current row data with processed row

Synopsis

```
#include <png.h>

void png_progressive_combine_row(png_structp png_ptr, png_bytep old_row,
png_bytep new_row);
```

Description

For non-NULL rows of interlaced images during progressive read, png_progressive_combine_row() shall combine the data for the current row with the previously processed row data. png_progressive_combine_row() shall return for NULL rows of interlaced images and memcpy rows for non-interlaced images.

png_read_end

Name

png_read_end -- read the end of PNG file

Synopsis

```
#include <png.h>
void png_read_end(png_structp png_ptr, png_infop info_ptr);
```

Description

png_read_end() reads the end of a PNG file after reading the image data, including any comments or time information at the end of the file. The function shall not read past the end of the file.

png_read_image

Name

png_read_image -- read the entire image into memory

Synopsis

```
#include <png.h>
void png_read_image(png_structp png_ptr, png_bytepp image);
```

Description

png_read_image() reads the entire image into memory at once. For each pass of an interlaced image, use png_read_rows() instead.

png_read_info

Name

png_read_info -- read the PNG image information

Synopsis

```
#include <png.h>
void png_read_info(png_structp png_ptr, png_infop info_ptr);
```

Description

Reads the information before the actual image data from the PNG file. The function allows reading a file that already has the PNG signature bytes read from the stream.

png_read_png

Name

png_read_png -- read the entire PNG file

Synopsis

```
#include <png.h>

void png_read_png(png_structp png_ptr, png_infop info_ptr, int
transforms, png_voidp params);
```

Description

png_read_png() shall provide the high-level read operation. The function shall read the entire image into memory. The integer "transforms" shall contain the logical OR of a set of the following transformation flags:

PNG_TRANSFORM_IDENTITY
No transformation

PNG_TRANSFORM_STRIP_16
Strip 16-bit samples to 8 bits

PNG_TRANSFORM_STRIP_ALPHA
Discard the alpha channel

PNG_TRANSFORM_PACKING
Expand 1, 2 and 4-bit samples to bytes

PNG_TRANSFORM_PACKSWAP
Change order of packed pixels to LSB first

PNG_TRANSFORM_EXPAND
Expand paletted images to RGB, grayscale to 8-bit images and tRNS chunks to alpha channels

PNG_TRANSFORM_INVERT_MONO
Invert monochrome images

PNG_TRANSFORM_SHIFT
Normalize pixels to the sBIT depth

PNG_TRANSFORM_BGR
Flip RGB to BGR, RGBA to BGRA

PNG_TRANSFORM_SWAP_ALPHA
Flip RGBA to ARGB or GA to AG

PNG_TRANSFORM_INVERT_ALPHA
Change alpha from opacity to transparency

PNG_TRANSFORM_SWAP_ENDIAN
Byte-swap 16-bit samples

"params" is unused and must be set to NULL.

png_read_row

Name

png_read_row -- read a row of image data

Synopsis

```
#include <png.h>

void png_read_row(png_structp png_ptr, png_bytep row, png_bytep
display_row);
```

Description

png_read_row() reads a row of actual image data. "row" holds the image pixels as they are processed. If the image is displayed after each pass, "display_row" is used to display a blurred progressive image. "display_row" can be NULL if the progressive image is not required.

png_read_rows

Name

png_read_rows -- read multiple rows of image data

Synopsis

```
#include <png.h>

void png_read_rows(png_structp png_ptr, png_bytepp row, png_bytepp
display_row, png_uint_32 num_rows);
```

Description

Read "num_rows" rows of image data starting from "row". If the image is interlaced, the rows must contain the contents of the rows from the previous pass. If the image is displayed after each pass, "display_row" is used to display a blurred progressive image. "display_row" can be NULL if the progressive image is not required.

png_read_update_info

Name

png_read_update_info -- update png_info structure

Synopsis

```
#include <png.h>
void png_read_update_info(png_structp png_ptr, png_infop info_ptr);
```

Description

png_read_update_info() updates the structure pointed to by *info_ptr* to reflect any transformations that have been requested. For example, rowbytes will be updated to handle expansion of an interlaced image with png_read_update_info().

png_set_IHDR

Name

png_set_IHDR -- set the PNG_IHDR chunk information

Synopsis

```
#include <png.h>

void png_set_IHDR(png_structp png_ptr, png_infop info_ptr, png_uint_32
width, png_uint_32 height, int bit_depth, int color_type, int
interlace_type, int compression_type, int filter_type);
```

Description

png_set_IHDR() shall set image header information in info_ptr. width is the image width in pixels. height is the image height in pixels. bit_depth is the bit depth of the image. Valid values shall include 1, 2, 4, 8, 16 and shall also depend on the color type. color_type is the type of image. Supported color types shall include: PNG_COLOR_TYPE_GRAY (bit depths 1, 2, 4, 8, 16) PNG_COLOR_TYPE_GRAY_ALPHA (bit depths 8, 16) PNG_COLOR_TYPE_PALETTE (bit depths 1, 2, 4, 8) PNG_COLOR_TYPE_RGB (bit depths 8, 16) PNG_COLOR_TYPE_RGB_ALPHA (bit depths 8, 16) PNG_COLOR_MASK_PALETTE PNG_COLOR_MASK_COLOR PNG_COLOR_MASK_ALPHA interlace_type is the image interlace method. Supported values shall include: PNG_INTERLACE_NONE or PNG_INTERLACE_ADAM7 compression_type is the method used for image compression. The value must be PNG_COMPRESSION_TYPE_DEFAULT. filter_type is the method used for image filtering. The value must be PNG_FILTER_TYPE_DEFAULT.

Errors

png_set_IHDR() shall invoke error function if any of the arguments has an invalid value.

png_set_PLTE

Name

png_set_PLTE -- set color values for the palette

Synopsis

```
#include <png.h>

void png_set_PLTE(png_structp png_ptr, png_infop info_ptr, png_colorp
palette, int num_palette);
```

Description

png_set_PLTE() shall set the array of color values used as palette for image to "palette". The palette shall include "num_palette" entries.

png_set_bKGD

Name

png_set_bKGD -- set the background color for given image

Synopsis

```
#include <png.h>

void png_set_bKGD(png_structp png_ptr, png_infop info_ptr, png_color_16p
background);
```

Description

png_set_bKGD() shall set the background color of an image to "background" and sets bKGD chunk information to valid for the image.

png_set_background

Name

png_set_background -- set the background for given image

Synopsis

```
#include <png.h>

void png_set_background(png_structp png_ptr, png_color_16p
background_color, int background_gamma_code, int need_expand, double
background_gamma);
```

Description

png_set_background() shall set the background of an image with alpha channel or simple transparency with the specified background color. If background_gamma_code is set to PNG_BACKGROUND_GAMMA_SCREEN, it indicates that the supplied background color is in the gamma space of the display, else if it is set to PNG_BACKGROUND_GAMMA_FILE, the color is in the gamma space of the file. If the background color is supplied at the original bit-depth for a grayscale image that is expanded to truecolor or to a higher bit-depth, need_expand must be set to 1, but if the background color is supplied at the expanded bit-depth, need_expand must be set to 0. Similarly for paletted images, if background color is supplied as a palette index, need_expand must be set to 1, else if background color is supplied as an RGB triplet, need_expand must be set to 0.

png_set_bgr

Name

png_set_bgr -- set pixel order to blue, green, red

Synopsis

```
#include <png.h>
void png_set_bgr(png_structp png_ptr);
```

Description

png_set_bgr() shall set the pixel order to blue, green, red.

png_set_cHRM

Name

png_set_cHRM -- set CIE chromacities and referenced white point for given image

Synopsis

```
#include <png.h>

void png_set_cHRM(png_structp png_ptr, png_infop info_ptr, double
white_x, double white_y, double red_x, double red_y, double green_x,
double green_y, double blue_x, double blue_y);
```

Description

png_set_cHRM() shall set the CIE x,y chromaticities of the red, green and blue display primaries for the image and the referenced white point. The values must range from 0 to 21474.83 both inclusive.

Errors

png_set_cHRM() shall report a non-fatal error and exit if any of the chromacity values lies outside the range 0 to 21474.83.

png_set_compression_buffer_size

Name

png_set_compression_buffer_size -- set the size of the compression buffer

Synopsis

```
#include <png.h>

void png_set_compression_buffer_size(png_structp png_ptr, png_uint_32
size);
```

Description

This interface shall set the size of the libz compression buffer `zbuf` for the specified PNG file.

The parameter *png_ptr* shall specify the PNG file for which to set the size of the compression buffer.

The parameter *size* shall specify the size to which to set the compression buffer, in bytes.

png_set_compression_level

Name

png_set_compression_level -- set image compression level

Synopsis

```
#include <png.h>
void png_set_compression_level(png_structp png_ptr, int level);
```

Description

png_set_compression_level() shall set the compression level to "level". The valid values for "level" range from [0,9], corresponding directly to compression levels for zlib. The value 0 implies no compression and 9 implies maximal compression. Note: Tests have shown that zlib compression levels 3-6 usually perform as well as level 9 for PNG images, and do considerably fewer calculations.

png_set_compression_mem_level

Name

png_set_compression_mem_level -- set how much memory to use for the internal state during PNG compression

Synopsis

```
#include <png.h>
void png_set_compression_mem_level(png_structp png_ptr, int mem_level);
```

Description

This interface shall set how much memory to use for the internal state during PNG compression.

The parameter *png_ptr* shall specify the PNG file to compress.

The parameter *mem_level* corresponds directly to the *memLevel* parameter of the libz `deflateInit2_()` interface. This parameter shall specify how much memory to use for the internal state. The value of *mem_level* must be between 1 and `MAX_MEM_LEVEL`. Smaller values use less memory but are slower, while higher values use more memory to gain compression speed.

png_set_compression_method

Name

png_set_compression_method -- set PNG compression algorithm

Synopsis

```
#include <png.h>
void png_set_compression_method(png_structp png_ptr, int method);
```

Description

This interface shall set the PNG compression algorithm to use.

The parameter *png_ptr* shall specify the PNG file to compress.

The parameter *method* corresponds directly to the *method* parameter of the libz `deflateInit2()` interface. An LSB-conforming implementation shall support the `Z_DEFLATED` method, and may support other implementation defined methods.

png_set_compression_strategy

Name

png_set_compression_strategy -- set PNG compression strategy

Synopsis

```
#include <png.h>
void png_set_compression_strategy(png_structp png_ptr, int strategy);
```

Description

This interface shall set the PNG compression strategy.

The parameter *png_ptr* shall specify the PNG file to compress.

The parameter *strategy* corresponds directly to the *strategy* parameter of the libz `deflateInit2_()` interface. This parameter shall specify the PNG compression strategy to use: one of `Z_DEFAULT_STRATEGY`, `Z_FILTERED`, and `Z_HUFFMAN_ONLY`.

png_set_compression_window_bits

Name

png_set_compression_window_bits -- set PNG compression window size

Synopsis

```
#include <png.h>

void png_set_compression_window_bits(png_structp png_ptr, int
window_bits);
```

Description

This interface shall set the PNG compression window size.

The parameter *window_bits* corresponds directly to the *windowBits* parameter of the libz `deflateInit2_()` interface. The value of this parameter equals the base 2 logarithm of the window size to use, and must be a value between 8 and 15.

png_set_dither

Name

png_set_dither -- turn on dithering to 8-bit

Synopsis

```
#include <png.h>

void png_set_dither(png_structp png_ptr, png_colorp palette, int
num_palette, int maximum_colors, png_uint_16p histogram, int
full_dither);
```

Description

png_set_dither() shall set transformation to dither file to 8-bit. For the given palette with num_palette number of colors, the number of colors in the palette shall be reduced to fit in "maximum_colors" if the palette is larger than maximum_colors. If supplied, the histogram is used to get better results of the reduced palette. For reducing the number of colors in palette, full_dither must be set to 0. If full_dither is set to 1, dithering cube shall be setup for RGB images to reduce the RGB file to a paletted file.

png_set_error_fn

Name

png_set_error_fn -- set user defined functions for error handling

Synopsis

```
#include <png.h>

void png_set_error_fn(png_structp png_ptr, png_voidp error_ptr,
png_error_ptr error_fn, png_error_ptr warning_fn);
```

Description

png_set_error_fn() shall replace the default error handling and warning functions with user defined function *error_fn* for handling fatal errors and function *warning_fn* for handling non-fatal errors. The replacement functions must do a longjmp to the last setjmp location if setjmp/longjmp method of error handling is used. If *error_fn* or *warning_fn* is NULL, the default functions for error handling shall be used.

png_set_expand

Name

png_set_expand -- set expansion transformation

Synopsis

```
#include <png.h>
void png_set_expand(png_structp png_ptr);
```

Description

`png_set_expand()` shall set transformation in *png_ptr* such that paletted images are expanded to RGB, grayscale images of bit-depth less than 8 are expanded to 8-bit images and tRNS chunks are expanded to alpha channels.

png_set_filler

Name

png_set_filler -- add a filler byte to given image

Synopsis

```
#include <png.h>
void png_set_filler(png_structp png_ptr, png_uint_32 filler, int flags);
```

Description

png_set_filler() shall set transformations in *png_ptr* such that a filler byte is added when an 8-bit grayscale image or 24-bit RGB image is read and a filler byte is deleted when an 8-bit grayscale image or 24-bit RGB image is written.

png_set_filter

Name

png_set_filter -- set filtering method

Synopsis

```
#include <png.h>
void png_set_filter(png_structp png_ptr, int method, int filters);
```

Description

png_set_filter() shall set the filtering method used for scan-line filtering. The only valid value for "method" is 0. "filters" is a bitmap for which the following bits may be set. PNG_NO_FILTERS PNG_FILTER_NONE PNG_FILTER_SUB PNG_FILTER_UP PNG_FILTER_AVG PNG_FILTER_PAETH PNG_ALL_FILTERS

png_set_gAMA

Name

png_set_gAMA -- set the gamma value for given image

Synopsis

```
#include <png.h>

void png_set_gAMA(png_structp png_ptr, png_infop info_ptr, double
file_gamma);
```

Description

Sets the gamma value of an image to "file_gamma" and sets gAMA chunk information to valid for the image.

Errors

png_set_gAMA() shall generate warning if file_gamma > 21474.83 or file_gamma = 0

png_set_gamma

Name

png_set_gamma -- transform the image from file gamma to screen gamma

Synopsis

```
#include <png.h>

void png_set_gamma(png_structp png_ptr, double screen_gamma, double
file_gamma);
```

Description

png_set_gamma() shall set the transformation for gamma correction of the PNG file based on the screen gamma i.e. the display exponent. The gamma transformation may be turned off later if no semitransparent entries are present in the tRNS array for palette images.

png_set_gray_1_2_4_to_8

Name

png_set_gray_1_2_4_to_8 -- set expansion transformation

Synopsis

```
#include <png.h>
void png_set_gray_1_2_4_to_8(png_structp png_ptr);
```

Description

`png_set_gray_1_2_4_to_8()` shall set transformation in *png_ptr* such that grayscale images of bit-depth less than 8 are expanded to 8-bit images. `png_set_png_set_gray_1_2_4_to_8()` is actually an alias for `png_set_expand()`.

png_set_gray_to_rgb

Name

png_set_gray_to_rgb -- expand the grayscale image to 24-bit RGB

Synopsis

```
#include <png.h>
void png_set_gray_to_rgb(png_structp png_ptr);
```

Description

png_set_gray_to_rgb() shall set transformations such that the grayscale image is converted to 24-bit RGB.

png_set_hIST

Name

png_set_hIST -- set the histogram of color palette

Synopsis

```
#include <png.h>

void png_set_hIST(png_structp png_ptr, png_infop info_ptr, png_uint_16p
hist);
```

Description

png_set_hIST() shall set the histogram of palette to "hist".

png_set_iCCP

Name

png_set_iCCP -- set ICC component

Synopsis

```
#include <png.h>

void png_set_iCCP(png_structp png_ptr, png_infop info_ptr, png_charp
name, int compression_type, png_charp profile, png_uint_32 proflen);
```

Description

png_set_iCCP() shall set the ICC component information to info_ptr. The arguments used to describe the ICC profile information have been described below:

<i>name</i>	ICC profile name
<i>compression_type</i>	compression type used must be 0
<i>profile</i>	profile data
<i>proflen</i>	length of profile data

png_set_interlace_handling

Name

png_set_interlace_handling -- get the number of passes for image interlacing

Synopsis

```
#include <png.h>
int png_set_interlace_handling(png_structp png_ptr);
```

Description

png_set_interlace_handling() shall set the scheme to interlacing for writing an image and return the number of sub-images required to write the image.

Return Value

png_set_interlace_handling() shall return 7 if the image is interlaced, otherwise png_set_interlace_handling() shall return 1.

png_set_invert_alpha

Name

png_set_invert_alpha -- invert the level of opacity of a PNG file

Synopsis

```
#include <png.h>
void png_set_invert_alpha(png_structp png_ptr);
```

Description

This interface shall invert the level of opacity (alpha) of a PNG file.

The parameter *png_ptr* shall specify the PNG file for which to invert the opacity.

png_set_invert_mono

Name

png_set_invert_mono -- reverse values for monochromaticity

Synopsis

```
#include <png.h>
void png_set_invert_mono(png_structp png_ptr);
```

Description

png_set_invert_mono() shall set monochromaticity value 0 to white and value 1 to black.

png_set_keep_unknown_chunks

Name

png_set_keep_unknown_chunks -- specify list of chunks and how to handle them

Synopsis

```
#include <png.h>

void png_set_keep_unknown_chunks(png_structp png_ptr, int keep, png_bytep
chunk_list, int num_chunks);
```

Description

This interface shall specify a list of chunks in the input PNG stream and how to handle them. Any unspecified chunks shall be handled in the default way. The IEND and IHDR chunks must not be specified.

The parameter *png_ptr* shall specify the PNG file.

The parameter *keep* shall specify how the unknown chunks are to be handled (see below).

The parameter *chunk_list* shall specify the list of chunks that shall be affected. The value passed must be a string of bytes with five bytes per chunk, or NULL or \0 if the value of *num_chunks* is 0.

The parameter *num_chunks* shall specify the number of chunks to be affected. If the value is 0, all unknown chunks shall be affected.

The possible values of *keep* are as follows.

- 0 handle unknown chunks in the default way
- 1 do not keep unknown chunks
- 2 keep unknown chunks only if they are safe to copy
- 3 keep unknown chunks even if they are unsafe to copy

Application Usage (informative)

The normal behavior of libpng is that known chunks are processed and unknown chunks are discarded. This interface reads both known and unknown chunks, handling them as specified by the user.

Unknown chunks specified to this interface are saved unchanged in a list of `png_unknown_chunk` structures. If a known chunk is specified in the list of unknown chunks, it will be handled per the *keep* parameter. If a chunk is specified in successive calls to this interface, the final call takes precedence.

png_set_mem_fn

Name

png_set_mem_fn -- install custom memory allocation functions

Synopsis

```
#include <png.h>

void png_set_mem_fn(png_structp png_ptr, png_voidp mem_ptr,
png_malloc_ptr malloc_fn, png_free_ptr free_fn);
```

Description

This interface shall install custom memory allocation functions.

The parameter *png_ptr* shall specify the PNG file.

The parameter *mem_ptr* shall specify a struct provided by the user for memory functions.

The parameter *malloc_fn* shall specify the function used to allocate memory. If the value of this parameter is `NULL`, then the capability to allocate memory with the libpng ABI shall be disabled.

The parameter *free_fn* shall specify the function used to free memory. If the value of this parameter is `NULL`, then the capability to free memory with the libpng ABI shall be disabled.

png_set_oFFs

Name

png_set_oFFs -- set screen offsets for given image

Synopsis

```
#include <png.h>

void png_set_oFFs(png_structp png_ptr, png_infop info_ptr, png_int_32
offset_x, png_int_32 offset_y, int unit_type);
```

Description

png_set_oFFs() shall set the positive offset from the left edge of the screen to *offset_x* and the positive offset from the left edge of the screen to *offset_y*. The *unit_type* must be PNG_OFFSET_PIXEL if the offset is defined in pixels or PNG_OFFSET_MICROMETER if the offset is defined in microns.

png_set_pHYs

Name

png_set_pHYs -- set physical resolution

Synopsis

```
#include <png.h>

void png_set_pHYs(png_structp png_ptr, png_infop info_ptr, png_uint_32
res_x, png_uint_32 res_y, int unit_type);
```

Description

png_set_pHYs() sets the physical resolution for the image in pixels per unit. The physical resolution in x direction is set to *res_x* and that in y direction is set to *res_y*. *unit_type* must be set to PNG_RESOLUTION_METER is the unit for resolution is pixels per unit, otherwise *unit_type* must be set to PNG_RESOLUTION_UNKNOWN.

png_set_packing

Name

png_set_packing -- expand image to 1 pixel per byte for bit-depths 1,2 and 4

Synopsis

```
#include <png.h>
void png_set_packing(png_structp png_ptr);
```

Description

png_set_packing() shall expand image to 1 pixel per byte for bit-depths 1, 2 and 4 without changing the order of the pixels. If png_set_packing() is not called, PNG files pack pixels of bit_depths 1, 2 and 4 into bytes as small as possible, for example, 8 pixels per byte for 1-bit files.

png_set_packswap

Name

png_set_packswap -- swap the order of pixels for packed-pixel image

Synopsis

```
#include <png.h>
void png_set_packswap(png_structp png_ptr);
```

Description

png_set_swap() shall change the pixel packing order for each byte for packed-pixel images with bit-depths 1, 2 or 4.

png_set_palette_to_rgb

Name

png_set_palette_to_rgb -- set expansion transformation

Synopsis

```
#include <png.h>
void png_set_palette_to_rgb(png_structp png_ptr);
```

Description

`png_set_palette_to_rgb()` shall set transformation in *png_ptr* such that paletted images are expanded to RGB. `png_set_palette_to_rgb()` is actually an alias for `png_set_expand()`.

png_set_progressive_read_fn

Name

png_set_progressive_read_fn -- set progressive read callback functions

Synopsis

```
#include <png.h>

void png_set_progressive_read_fn(png_structp png_ptr, png_voidp user_ptr,
png_progressive_info_ptr info_callback, png_progressive_row_ptr
row_callback, png_progressive_end_ptr end_callback);
```

Description

png_set_progressive_read_fn() shall provide function callbacks for which shall be called for processing image data by png_process_data(). "info_callback" shall be called to process header information, "row_callback" shall be called when each row is completed and "end_callback" shall be called to process end of image information. png_set_progressive_read_fn() must be called even if all callback functions are NULL. The user-defined structure pointed to by "user_ptr" may be retrieved from inside the callbacks using function get_progressive_ptr().

png_set_read_fn

Name

png_set_read_fn -- set user-defined function for reading a PNG stream

Synopsis

```
#include <png.h>

void png_set_read_fn(png_structp png_ptr, png_voidp io_ptr, png_rw_ptr
read_data_fn);
```

Description

png_set_read_fn() sets the read_data_fn as the input function for reading PNG files instead of using standard C I/O stream functions. png_ptr - pointer to input data structure png_struct io_ptr - pointer to user-defined structure containing information about the input functions. This value may be NULL. read_data_fn - pointer to new input function that shall take the following arguments: - a pointer to a png_struct - a pointer to a structure where input data can be stored - 32-bit unsigned int to indicate number of bytes to read The input function should invoke png_error() to handle any fatal errors and png_warning() to handle non-fatal errors.

png_set_read_user_chunk_fn

Name

`png_set_read_user_chunk_fn` -- install custom callback function to handle unknown chunks in the input stream

Synopsis

```
#include <png.h>

void png_set_read_user_chunk_fn(png_structp png_ptr, png_voidp
user_chunk_ptr, png_user_chunk_ptr read_user_chunk_fn);
```

Description

This interface shall install a custom callback function to handle unknown chunks in the input stream.

The parameter *png_ptr* shall specify the PNG file.

The parameter *user_chunk_ptr* shall specify a user pointer obtainable with `png_get_user_chunk_ptr()`.

The parameter *read_user_chunk_fn* shall specify the custom callback function.

png_set_read_user_transform_fn

Name

png_set_read_user_transform_fn -- install a custom input transformation callback function

Synopsis

```
#include <png.h>

void png_set_read_user_transform_fn(png_structp png_ptr,
png_user_transform_ptr read_user_transform_fn);
```

Description

This interface shall install a custom input transformation callback function.

The parameter *png_ptr* shall specify the PNG file to be transformed.

The parameter *read_user_transform_fn* shall specify the custom callback function.

png_set_rgb_to_gray

Name

png_set_rgb_to_gray -- reduce 24-bit RGB to grayscale image

Synopsis

```
#include <png.h>
void png_set_rgb_to_gray(png_structp png_ptr);
```

Description

png_set_rgb_to_gray() shall set transformations such that the 24-bit RGB image is converted to grayscale.

png_set_rows

Name

png_set_rows -- put image data in png_info structure

Synopsis

```
#include <png.h>
void png_set_rows(png_structp png_ptr, png_infop info_ptr, png_bytepp
row_pointers);
```

Description

png_set_rows() shall put rows of image data into the *info_ptr* structure, where *row_pointers* is an array of pointers to the pixel data for each row.

png_set_sBIT

Name

png_set_sBIT -- set number of significant bits for each channel

Synopsis

```
#include <png.h>

void png_set_sBIT(png_structp png_ptr, png_infop info_ptr, png_color_8p
sig_bit);
```

Description

png_set_sBIT shall set the number of significant bits for each of gray, red, green and blue channels, whichever are appropriate for the given color type.

png_set_sRGB

Name

png_set_sRGB -- set the rendering intent for given image

Synopsis

```
#include <png.h>

void png_set_sRGB(png_structp png_ptr, png_infop info_ptr, int
srgb_intent);
```

Description

png_set_sRGB() shall set the rendering intent of an image as specified by *srgb_intent* and shall set the sRGB chunk information to valid for the image. The presence of sRGB chunk implies that the pixel data is in the sRGB color space. *srgb_intent* can take one of the following values

PNG_sRGB_INTENT_SATURATION
PNG_sRGB_INTENT_PERCEPTUAL
PNG_sRGB_INTENT_ABSOLUTE
PNG_sRGB_INTENT_RELATIVE

png_set_sRGB_gAMA_and_cHRM

Name

png_set_sRGB_gAMA_and_cHRM -- set rendering intent, gamma values, and CIE chromaticities of a PNG file

Synopsis

```
#include <png.h>

void png_set_sRGB_gAMA_and_cHRM(png_structp png_ptr, png_infop info_ptr,
int srgb_intent);
```

Description

This interface shall set the rendering intent, gamma values, and CIE chromaticities of a PNG file.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr* shall specify the PNG info structure.

The parameter *srgb_intent* shall specify the rendering intent. Because the sRGB chunk is present, the pixel data uses the sRGB color space. This interface shall also write gAMA and cHRM chunks with values consistent with sRGB.

png_set_shift

Name

png_set_shift -- shift pixel values to valid bit-depth

Synopsis

```
#include <png.h>
void png_set_shift(png_structp png_ptr, png_color_8p true_bits);
```

Description

If image data in a row buffer is stored in a bit depth other than those supported by PNG, `png_set_shift()` shall scale the values to a valid bit-depth defined by PNG format. For example, 3-bit data in range 0-7 is scaled to 4-bit PNG.

png_set_sig_bytes

Name

png_set_sig_bytes -- number of bytes read from PNG file

Synopsis

```
#include <png.h>
void png_set_sig_bytes(png_structp png_ptr, int num_bytes);
```

Description

png_set_sig_bytes() shall store the number of bytes of the PNG file signature that have been read from the PNG stream.

Errors

png_set_sig_bytes() shall invoke error function if num_bytes > 8.

png_set_strip_16

Name

png_set_strip_16 -- strip 16 bit PNG file to 8 bit depth

Synopsis

```
#include <png.h>
void png_set_strip_16(png_structp png_ptr);
```

Description

png_set_strip_16() shall strip the pixels of a PNG stream with 16 bits per channel to 8 bits per channel.

png_set_strip_alpha

Name

png_set_strip_alpha -- remove alpha channel on the given image

Synopsis

```
#include <png.h>
void png_set_strip_alpha(png_structp png_ptr);
```

Description

png_set_strip_alpha() shall set transformation on the image to remove the alpha channel.

png_set_swap

Name

png_set_swap -- swap byte-order for 16 bit depth files

Synopsis

```
#include <png.h>
void png_set_swap(png_structp png_ptr);
```

Description

PNG files store 16-bit pixels in network byte order (big-endian, ie most significant bytes first). `png_set_swap()` shall switch the byte-order to little-endian (ie, least significant bits first).

png_set_swap_alpha

Name

png_set_swap_alpha -- swap image data from RGBA to ARGB format

Synopsis

```
#include <png.h>
void png_set_swap_alpha(png_structp png_ptr);
```

Description

png_set_swap_alpha() shall swap data for an image with an alpha channel from RGBA format to ARGB format.

png_set_tIME

Name

png_set_tIME -- set last modification time for the image

Synopsis

```
#include <png.h>

void png_set_tIME(png_structp png_ptr, png_infop info_ptr, png_timep
mod_time);
```

Description

png_set_sBIT shall set the time of last modification of the image in *info_ptr* as specified by *mod_time*.

png_set_tRNS

Name

png_set_tRNS -- set transparency values for images

Synopsis

```
#include <png.h>

void png_set_tRNS(png_structp png_ptr, png_infop info_ptr, png_bytep
trans, int num_trans, png_color_16p trans_values);
```

Description

png_set_tRNS() shall set the transparency data for paletted images and image types that don't need a full alpha channel. For a paletted image, png_set_tRNS() shall set the array of transparency values for the palette colors to "trans". The number of transparency entries is given by "num_trans". For non-paletted images, png_set_tRNS() shall set the single color value or graylevel to "trans_values"

png_set_tRNS_to_alpha

Name

png_set_tRNS_to_alpha -- set expansion transformation

Synopsis

```
#include <png.h>
void png_set_tRNS_to_alpha(png_structp png_ptr);
```

Description

png_set_tRNS_to_alpha() shall set transformation in *png_ptr* such that tRNS chunks are expanded to alpha channels. png_set_tRNS_to_alpha() is actually an alias for png_set_expand().

png_set_text

Name

png_set_text -- stores information for image comments

Synopsis

```
#include <png.h>

void png_set_text(png_structp png_ptr, png_infop info_ptr, png_textp
text_ptr, int num_text);
```

Description

png_set_text() shall store information for image comments given in *text_ptr* to *info_ptr*. *text_ptr* is an array of size *num_text* of png_text structures whose member fields include:

compression type of compression used on text. Valid values are:

PNG_TEXT_COMPRESSION_NONE
PNG_TEXT_COMPRESSION_zTXt
PNG_ITXT_COMPRESSION_NONE
PNG_ITXT_COMPRESSION_zTXt

key keyword for comment. Must contain 1-79 characters.

text text comment for current keyword. May be empty.

text_length length of text string after decompression. 0 for iTXt.

png_set_unknown_chunk_location

Name

png_set_unknown_chunk_location -- set the location of an unknown chunk in a PNG file

Synopsis

```
#include <png.h>

void png_set_unknown_chunk_location(png_structp png_ptr, png_infop
info_ptr, int chunk, int location);
```

Description

This interface shall set the location of an unknown chunk in a PNG file.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr* shall specify the PNG info structure.

The parameter *chunk* shall specify the number of the chunk in the array of unknown chunks.

The parameter *location* shall specify the new location of the chunk within the PNG file.

png_set_unknown_chunks

Name

png_set_unknown_chunks -- insert unknown chunks into a PNG file

Synopsis

```
#include <png.h>

void png_set_unknown_chunks(png_structp png_ptr, png_info_ptr info_ptr,
png_unknown_chunkp unknowns, int num_unknowns);
```

Description

This interface shall insert unknown chunks into a PNG file.

The parameter *png_ptr* shall specify the PNG file.

The parameter *info_ptr* shall specify the PNG info structure.

The parameter *unknowns* shall specify an array of `png_unknown_chunk` structures containing the unknown chunks, as described under `png_get_unknown_chunks()`. The `location` member of a `png_unknown_chunk` structure can take several special values (see below).

The parameter *num_unknowns* shall specify the number of unknown chunks.

The special values for the `location` members of the `png_unknown_chunk` structures are as follows.

0	do not write the chunk
PNG_HAVE_IHDR	insert chunk before PLTE
PNG_HAVE_PLTE	insert chunk before IDAT
PNG_AFTER_IDAT	insert chunk after IDAT

Notes

The `location` member of the `png_unknown_chunk` structure is set automatically depending on how much of the PNG file has been written. Its value can be changed after calling this interface. The chunk is placed within a location according to its position in the array of structures, as described under `png_get_unknown_chunks()`.

png_set_write_fn

Name

png_set_write_fn -- set user-defined function for writing a PNG stream

Synopsis

```
#include <png.h>

void png_set_write_fn(png_structp png_ptr, png_voidp io_ptr, png_rw_ptr
write_data_fn, png_flush_ptr output_flush_fn);
```

Description

png_set_write_fn() sets the write_data_fn as the output function for writing PNG files instead of using standard C I/O stream functions. png_ptr - pointer to output data structure png_struct io_ptr - pointer to user-defined structure containing information about the output functions. This value may be NULL. write_data_fn - pointer to new output function that shall take the following arguments: - a pointer to a png_struct - a pointer to a structure where output data can be stored - 32-bit unsigned int to indicate number of bytes to write The output function should invoke png_error() to handle any fatal errors and png_warning() to handle non-fatal errors. flush_data_fn - pointer to a new flush function that shall take a pointer to a png_struct as argument. This function shall flush any remaining data in buffers used by the output function. If the output function does not buffer output, a function prototype must still be supplied.

png_set_write_status_fn

Name

png_set_write_status_fn -- install custom callback function to be called after row is written

Synopsis

```
#include <png.h>
void png_set_write_status_fn(png_structp png_ptr, png_write_status_ptr
write_row_fn);
```

Description

This interface shall install a custom callback function to be called after a row has been written.

The parameter *png_ptr* shall specify the PNG file to be transformed.

The parameter *write_row_fn* shall specify the custom callback function.

png_set_write_user_transform_fn

Name

png_set_write_user_transform_fn -- install a custom output transformation callback function

Synopsis

```
#include <png.h>

void png_set_write_user_transform_fn(png_structp png_ptr,
png_user_transform_ptr write_user_transform_fn);
```

Description

This interface shall install a custom output transformation callback function.

The parameter *png_ptr* shall specify the PNG file to be transformed.

The parameter *write_user_transform_fn* shall specify the custom callback function.

png_sig_cmp

Name

png_sig_cmp -- match the PNG signature

Synopsis

```
#include <png.h>
int png_sig_cmp(png_bytep sig, png_size_t start, png_size_t
num_to_check);
```

Description

png_sig_cmp() checks whether the given number of bytes match the PNG signature starting from the start position. The function shall return non-zero if num_to_check == 0 or start > 7.

Return Value

Zero - the given number of bytes starting from start position match the respective bytes of the PNG signature.
Non-zero - the given number of bytes starting from start position do not match the respective bytes of the PNG signature or num_to_check == 0 or start > 7.

png_start_read_image

Name

png_start_read_image -- start reading a PNG file

Synopsis

```
#include <png.h>
void png_start_read_image(png_structp png_ptr);
```

Description

This interface shall update the palette with the previously specified transformations, and then start reading the specified PNG file.

The parameter *png_ptr* shall specify the PNG file to read.

png_warning

Name

png_warning -- default function to handle non-fatal errors

Synopsis

```
#include <png.h>
void png_warning(png_structp png_ptr, png_const_charp warning_message);
```

Description

png_warning() is the default function for handling non-fatal errors. The default function to handle warnings may be changed by using png_set_error_fn() to replace the warning function at run-time.

png_write_chunk

Name

png_write_chunk -- write a PNG chunk

Synopsis

```
#include <png.h>

void png_write_chunk(png_structp png_ptr, png_bytep chunk_name, png_bytep
data, png_size_t length);
```

Description

png_write_chunk() writes the start of a PNG chunk, the chunk data and the end of the chunk all at once.

png_write_end

Name

png_write_end -- write the end of a PNG file

Synopsis

```
#include <png.h>
void png_write_end(png_structp png_ptr, png_infop info_ptr);
```

Description

png_write_end() writes the end of a PNG file to which the image data has already been written. The user may write time information or comments at the end of the PNG file.

png_write_flush

Name

png_write_flush -- flush the current output buffers

Synopsis

```
#include <png.h>
void png_write_flush(png_structp png_ptr);
```

Description

png_write_flush() shall the current output buffers for any pending data.

png_write_image

Name

png_write_image -- write the given image data

Synopsis

```
#include <png.h>
void png_write_image(png_structp png_ptr, png_bytepp image);
```

Description

Write the rows of given image data. If the image is not interlaced, the image shall be written in a single pass.

png_write_info

Name

png_write_info -- write PNG information to file

Synopsis

```
#include <png.h>
void png_write_info(png_structp png_ptr, png_infop info_ptr);
```

Description

png_write_info() writes the PNG information in *info_ptr* to file.

png_write_png

Name

png_write_png -- write the entire PNG file

Synopsis

```
#include <png.h>

void png_write_png(png_structp png_ptr, png_infop info_ptr, int
transforms, png_voidp params);
```

Description

png_write_png() shall provide the high-level write operation. The function shall write the PNG stream if the entire image information is available in png_ptr. The integer "transforms" shall contain the logical OR of a set of the following transformation flags:

PNG_TRANSFORM_IDENTITY
No transformation

PNG_TRANSFORM_PACKING
Expand 1, 2 and 4-bit samples to bytes

PNG_TRANSFORM_PACKSWAP
Change order of packed pixels to LSB first

PNG_TRANSFORM_INVERT_MONO
Invert monochrome images

PNG_TRANSFORM_SHIFT
Normalize pixels to the sBIT depth

PNG_TRANSFORM_BGR
Flip RGB to BGR, RGBA to BGRA

PNG_TRANSFORM_SWAP_ALPHA
Flip RGBA to ARGB or GA to AG

PNG_TRANSFORM_INVERT_ALPHA
Change alpha from opacity to transparency

PNG_TRANSFORM_SWAP_ENDIAN
Byte-swap 16-bit samples

PNG_TRANSFORM_STRIP_FILLER
Strip off filler bytes

"params" is unused and must be set to NULL.

png_write_row

Name

png_write_row -- write a row of image data

Synopsis

```
#include <png.h>
void png_write_row(png_structp png_ptr, png_bytep row);
```

Description

Process and write a row of image data. The header information must have been written before the image data can be written.

png_write_rows

Name

png_write_rows -- write multiple rows of image data

Synopsis

```
#include <png.h>
void png_write_rows(png_structp png_ptr, png_bytepp row, png_uint_32
num_rows);
```

Description

Process and write "num_rows" rows of image data starting from "row".

V. JPEG library

Table of Contents

9. Libraries

9.1. Interfaces for libjpeg

9.1.1. JPEG Reference library

9.2. Data Definitions for libjpeg

9.2.1. jerror.h

9.2.2. jpeglib.h

9.3. Interface Definitions for libjpeg

jpeg CreateCompress -- allocate and initialize a JPEG compression object
jpeg CreateDecompress -- allocate and initialize a JPEG decompression object
jpeg abort -- aborts the compression or decompression cycle
jpeg abort_compress -- abort processing of JPEG compression operation
jpeg abort_decompress -- abort processing of JPEG decompression operation
jpeg add_quant_table -- add a quantization table
jpeg alloc_huff_table -- allocate Huffman table
jpeg alloc_quant_table -- allocate quantization table
jpeg calc_output_dimensions -- compute output image dimensions
jpeg consume_input -- decode input data
jpeg copy_critical_parameters -- copy critical compression parameters from source decompression object
jpeg default_colorspace -- set default colorspace based on input image's color space
jpeg destroy -- deallocation of a JPEG object
jpeg destroy_compress -- deallocate a JPEG compression object
jpeg destroy_decompress -- deallocate a JPEG decompression object
jpeg finish_compress -- complete the compression cycle
jpeg finish_decompress -- complete decompression cycle
jpeg finish_output -- complete pass in buffered-image mode
jpeg has_multiple_scans -- test if input image has multiple scans
jpeg input_complete -- test for end-of-image
jpeg new_colormap -- switch to a new external colormap between output passes
jpeg quality_scaling -- convert quality scaling to percentage scaling factor
jpeg read_coefficients -- read the contents of JPEG file as DCT coefficients
jpeg read_header -- read start of JPEG datastream
jpeg read_raw_data -- read raw downsampled image data
jpeg read_scanlines -- read scanlines of data from JPEG decompressor
jpeg resync_to_restart -- resync if marker other than expected restart marker found
jpeg save_markers -- save the contents of special markers
jpeg set_colorspace -- set JPEG file's colorspace
jpeg set_defaults -- set compression parameters to default values
jpeg set_linear_quality -- construct JPEG quantization tables for indicated scale factor
jpeg set_marker_processor -- set processor method for COM or APPn markers
jpeg set_quality -- construct JPEG quantization tables for indicated quality
jpeg simple_progression -- generate scan script for writing progressive JPEG file
jpeg start_compress -- initialize a compression cycle
jpeg start_decompress -- initialize a decompression cycle
jpeg start_output -- initialize for a pass in buffered-image mode
jpeg std_error -- update error manager with error handling routines
jpeg stdio_dest -- Initialize state for output to stdio stream

jpeg_stdio_src -- Initialize state for input from stdio stream
jpeg_suppress_tables -- control quantization and Huffman table suppression
jpeg_write_coefficients -- Compression initialization for writing raw-coefficient data
jpeg_write_m_byte -- emit a byte of special marker data
jpeg_write_m_header -- emit header for special marker
jpeg_write_marker -- write special marker data
jpeg_write_raw_data -- write raw downsampled image data
jpeg_write_scanlines -- write scanlines of data to JPEG compressor
jpeg_write_tables -- create a tables-only file

Chapter 9. Libraries

9.1. Interfaces for libjpeg

Table 9-1 defines the library name and shared object name for the libjpeg library

Table 9-1. libjpeg Definition

Library:	libjpeg
SONAME:	libjpeg.so.62

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

9.1.1. JPEG Reference library

9.1.1.1. Interfaces for JPEG Reference library

An LSB conforming implementation shall provide the generic functions for JPEG Reference library specified in Table 9-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 9-2. libjpeg - JPEG Reference library Function Interfaces

jpeg_CreateCompress [LSB]	jpeg_CreateDecompress [LSB]	jpeg_abort [LSB]
jpeg_abort_compress [LSB]	jpeg_abort_decompress [LSB]	jpeg_add_quant_table [LSB]
jpeg_alloc_huff_table [LSB]	jpeg_alloc_quant_table [LSB]	jpeg_calc_output_dimensions [LSB]
jpeg_consume_input [LSB]	jpeg_copy_critical_parameters [LSB]	jpeg_default_colorspace [LSB]
jpeg_destroy [LSB]	jpeg_destroy_compress [LSB]	jpeg_destroy_decompress [LSB]
jpeg_finish_compress [LSB]	jpeg_finish_decompress [LSB]	jpeg_finish_output [LSB]
jpeg_has_multiple_scans [LSB]	jpeg_input_complete [LSB]	jpeg_new_colormap [LSB]
jpeg_quality_scaling [LSB]	jpeg_read_coefficients [LSB]	jpeg_read_header [LSB]
jpeg_read_raw_data [LSB]	jpeg_read_scanlines [LSB]	jpeg_resync_to_restart [LSB]
jpeg_save_markers [LSB]	jpeg_set_colorspace [LSB]	jpeg_set_defaults [LSB]
jpeg_set_linear_quality [LSB]	jpeg_set_marker_processor [LSB]	jpeg_set_quality [LSB]
jpeg_simple_progression [LSB]	jpeg_start_compress [LSB]	jpeg_start_decompress [LSB]

jpeg_start_output [LSB]	jpeg_std_error [LSB]	jpeg_stdio_dest [LSB]
jpeg_stdio_src [LSB]	jpeg_suppress_tables [LSB]	jpeg_write_coefficients [LSB]
jpeg_write_m_byte [LSB]	jpeg_write_m_header [LSB]	jpeg_write_marker [LSB]
jpeg_write_raw_data [LSB]	jpeg_write_scanlines [LSB]	jpeg_write_tables [LSB]

9.2. Data Definitions for libjpeg

This section defines global identifiers and their values that are associated with interfaces contained in libjpeg. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

9.2.1. jerror.h

```
#define JERROR_H
#define JMESSAGE(code,string) code ,

9.3. Interface Definitions for libjpeg

Table of Contents

[jpeg_CreateCompress](#) -- allocate and initialize a JPEG compression object
[jpeg_CreateDecompress](#) -- allocate and initialize a JPEG decompression object
[jpeg_abort](#) -- aborts the compression or decompression cycle
[jpeg_abort_compress](#) -- abort processing of JPEG compression operation
[jpeg_abort_decompress](#) -- abort processing of JPEG decompression operation
[jpeg_add_quant_table](#) -- add a quantization table
[jpeg_alloc_huff_table](#) -- allocate Huffman table
[jpeg_alloc_quant_table](#) -- allocate quantization table
[jpeg_calc_output_dimensions](#) -- compute output image dimensions
[jpeg_consume_input](#) -- decode input data
[jpeg_copy_critical_parameters](#) -- copy critical compression parameters from source decompression object
[jpeg_default_colorspace](#) -- set default colorspace based on input image's color space
[jpeg_destroy](#) -- deallocation of a JPEG object
[jpeg_destroy_compress](#) -- deallocate a JPEG compression object
[jpeg_destroy_decompress](#) -- deallocate a JPEG decompression object
[jpeg_finish_compress](#) -- complete the compression cycle
[jpeg_finish_decompress](#) -- complete decompression cycle
[jpeg_finish_output](#) -- complete pass in buffered-image mode
[jpeg_has_multiple_scans](#) -- test if input image has multiple scans
[jpeg_input_complete](#) -- test for end-of-image
[jpeg_new_colormap](#) -- switch to a new external colormap between output passes
[jpeg_quality_scaling](#) -- convert quality scaling to percentage scaling factor
[jpeg_read_coefficients](#) -- read the contents of JPEG file as DCT coefficients
[jpeg_read_header](#) -- read start of JPEG datastream
[jpeg_read_raw_data](#) -- read raw downsampled image data
[jpeg_read_scanlines](#) -- read scanlines of data from JPEG decompressor
[jpeg_resync_to_restart](#) -- resync if marker other than expected restart marker found
[jpeg_save_markers](#) -- save the contents of special markers
[jpeg_set_colorspace](#) -- set JPEG file's colorspace
[jpeg_set_defaults](#) -- set compression parameters to default values
[jpeg_set_linear_quality](#) -- construct JPEG quantization tables for indicated scale factor
[jpeg_set_marker_processor](#) -- set processor method for COM or APPn markers
[jpeg_set_quality](#) -- construct JPEG quantization tables for indicated quality
[jpeg_simple_progression](#) -- generate scan script for writing progressive JPEG file
[jpeg_start_compress](#) -- initialize a compression cycle
[jpeg_start_decompress](#) -- initialize a decompression cycle
[jpeg_start_output](#) -- initialize for a pass in buffered-image mode
[jpeg_std_error](#) -- update error manager with error handling routines
[jpeg_stdio_dest](#) -- Initialize state for output to stdio stream
[jpeg_stdio_src](#) -- Initialize state for input from stdio stream
[jpeg_suppress_tables](#) -- control quantization and Huffman table suppression
[jpeg_write_coefficients](#) -- Compression initialization for writing raw-coefficient data
[jpeg_write_m_byte](#) -- emit a byte of special marker data
[jpeg_write_m_header](#) -- emit header for special marker
[jpeg_write_marker](#) -- write special marker data
[jpeg_write_raw_data](#) -- write raw downsampled image data
[jpeg_write_scanlines](#) -- write scanlines of data to JPEG compressor

jpeg_write_tables -- create a tables-only file

The interfaces defined on the following pages are included in libjpeg and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in Section 9.1 shall behave as described in the referenced base document.

jpeg_CreateCompress

Name

jpeg_CreateCompress -- allocate and initialize a JPEG compression object

Synopsis

```
#include <jpeglib.h>
void jpeg_CreateCompress(j_compress_ptr cinfo, int version, size_t size);
```

Description

The function `jpeg_CreateCompress()` shall allocate and initialize a JPEG compression object of type `struct jpeg_compress_struct`. The error handler structure of type `struct jpeg_error_mgr` must be initialized before making a call to `jpeg_CreateCompress()`. `JPEG_LIB_VERSION` and size of the structure used to hold the JPEG compression object `struct jpeg_compress_struct` must be passed in arguments `version` and `size` respectively.

Errors

`jpeg_CreateCompress()` shall exit via the error handler if it fails to allocate memory.

jpeg_CreateDecompress

Name

jpeg_CreateDecompress -- allocate and initialize a JPEG decompression object

Synopsis

```
#include <jpeglib.h>

void jpeg_CreateDecompress(j_decompress_ptr cinfo, int version, size_t
size);
```

Description

The function `jpeg_CreateDecompress()` shall allocate and initialize a JPEG decompression object of type `struct jpeg_decompress_struct`. The error handler structure of type `struct jpeg_error_mgr` must be initialized before making a call to `jpeg_CreateDecompress()`. `JPEG_LIB_VERSION` and size of the structure used to hold the JPEG compression object `struct jpeg_decompress_struct` must be passed in arguments `version` and `size` respectively.

Errors

`jpeg_CreateDecompress()` shall exit via the error handler if it fails to allocate memory.

jpeg_abort

Name

jpeg_abort -- aborts the compression or decompression cycle

Synopsis

```
#include <jpeglib.h>
void jpeg_abort(j_common_ptr cinfo);
```

Description

The function jpeg_abort() shall abort the processing of a compression or decompression operation. The function shall return the given object to an idle state releasing any working memory. The object may be reused after a call to jpeg_abort().

jpeg_abort_compress

Name

jpeg_abort_compress -- abort processing of JPEG compression operation

Synopsis

```
#include <jpeglib.h>
void jpeg_abort_compress(j_compress_ptr cinfo);
```

Description

The function `jpeg_abort_compress()` shall abort the processing of a JPEG compression operation. The function shall return the given compression object to an idle state releasing any working memory. The compression object may be reused after a call to `jpeg_abort_compress()`.

jpeg_abort_decompress

Name

jpeg_abort_decompress -- abort processing of JPEG decompression operation

Synopsis

```
#include <jpeglib.h>
void jpeg_abort_decompress(j_decompress_ptr cinfo);
```

Description

The function `jpeg_abort_decompress()` shall abort the processing of a JPEG decompression operation. The function shall return the given decompression object to an idle state releasing any working memory. The decompression object may be reused after a call to `jpeg_abort_decompress()`.

jpeg_add_quant_table

Name

jpeg_add_quant_table -- add a quantization table

Synopsis

```
#include <jpeglib.h>

void jpeg_add_quant_table(j_compress_ptr cinfo, int table_slot, const
unsigned int * basic_table, int scale_factor, boolean force_baseline);
```

Description

The function `jpeg_add_quant_table()` shall add a quantization table parameter at the "table_slot" index of the quantization table array. "basic_table" points to an array of 64 unsigned ints given in normal array order. These values are multiplied by "scale_factor"/100. The values are limited to the range 1..65535. If "force_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

Errors

`jpeg_add_quant_table()` shall return error and exit if "table_slot" is $\geq$ NUM_QUANT_TBLS.
`jpeg_add_quant_table()` shall return error and exit if the state of the compression object indicates that the compression cycle has started.

jpeg_alloc_huff_table

Name

jpeg_alloc_huff_table -- allocate Huffman table

Synopsis

```
#include <jpeglib.h>
JHUFF_TBL * jpeg_alloc_huff_table(j_common_ptr cinfo);
```

Description

jpeg_alloc_huff_table() shall allocate memory for a structure holding Huffman coding table.

Return Value

jpeg_alloc_huff_table() shall return a pointer to allocated data structure for the Huffman coding table.

jpeg_alloc_quant_table

Name

jpeg_alloc_quant_table -- allocate quantization table

Synopsis

```
#include <jpeglib.h>
JQUANT_TBL * jpeg_alloc_quant_table(j_common_ptr cinfo);
```

Description

jpeg_alloc_quant_table() shall allocate memory for a structure holding quantization table.

Return Value

jpeg_alloc_quant_table() shall return a pointer to allocated data structure for the quantization table.

jpeg_calc_output_dimensions

Name

jpeg_calc_output_dimensions -- compute output image dimensions

Synopsis

```
#include <jpeglib.h>
void jpeg_calc_output_dimensions(j_decompress_ptr cinfo);
```

Description

jpeg_calc_output_dimensions() computes the output image dimensions based on the current compression parameter settings in the compression object. The following dimensions shall be computed:

<i>output_width</i>	actual width of output image
<i>output_height</i>	actual height of output image
<i>out_color_components</i>	number of color components in out_color_space
<i>output_components</i>	number of color components returned
<i>rec_outbuf_height</i>	recommended height of scanline buffer

jpeg_consume_input

Name

jpeg_consume_input -- decode input data

Synopsis

```
#include <jpeglib.h>
int jpeg_consume_input(j_decompress_ptr cinfo);
```

Description

jpeg_consume_input() shall decode the input data as it arrives, even if it is not to be displayed.

Return Value

jpeg_consume_input() shall return with one of the following return codes:

<i>JPEG_REACHED_SOS</i>	reached SOS marker
<i>JPEG_REACHED_EOI</i>	reached EOI marker
<i>JPEG_ROW_COMPLETED</i>	completed reading one MCU row of compressed data
<i>JPEG_SCAN_COMPLETED</i>	completed reading last MCU row of compressed scan
<i>JPEG_SUSPENDED</i>	if data source module requests suspension of the decompressor.

jpeg_copy_critical_parameters

Name

jpeg_copy_critical_parameters -- copy critical compression parameters from source decompression object

Synopsis

```
#include <jpeglib.h>

void jpeg_copy_critical_parameters(j_decompress_ptr srcinfo,
j_compress_ptr dstinfo);
```

Description

jpeg_copy_critical_parameters() shall initialize the compression object with default parameters, then copy the parameters needed for lossless transcoding from the source decompression object.

jpeg_default_colorspace

Name

jpeg_default_colorspace -- set default colorspace based on input image's color space

Synopsis

```
#include <jpeglib.h>
void jpeg_default_colorspace(j_compress_ptr cinfo);
```

Description

jpeg_default_colorspace() shall set the JPEG color space to a default value based on the color space of the input image.

jpeg_destroy

Name

jpeg_destroy -- deallocation of a JPEG object

Synopsis

```
#include <jpeglib.h>
void jpeg_destroy(j_common_ptr cinfo);
```

Description

The function `jpeg_destroy()` shall deallocate and release all memory associated with the JPEG object. The object itself and the error manager struct allocated by the application should not be freed by this function.

jpeg_destroy_compress

Name

jpeg_destroy_compress -- deallocate a JPEG compression object

Synopsis

```
#include <jpeglib.h>
void jpeg_destroy_compress(j_compress_ptr cinfo);
```

Description

The function `jpeg_destroy_compress()` shall deallocate and release all memory associated with the compression object. The `jpeg_compress_struct` itself and the error manager struct allocated by the application should not be freed by this function.

jpeg_destroy_decompress

Name

jpeg_destroy_decompress -- deallocate a JPEG decompression object

Synopsis

```
#include <jpeglib.h>
void jpeg_destroy_decompress(j_decompress_ptr cinfo);
```

Description

The function `jpeg_destroy_decompress()` shall deallocate and release all memory associated with the decompression object. The `jpeg_decompress_struct` itself and the error manager struct allocated by the application should not be freed by this function.

jpeg_finish_compress

Name

jpeg_finish_compress -- complete the compression cycle

Synopsis

```
#include <jpeglib.h>
void jpeg_finish_compress(j_compress_ptr cinfo);
```

Description

The function `jpeg_finish_compress()` shall set the compression state to completion. Any remaining bufferload of data shall be written to the data destination. `jpeg_finish_compress()` shall also release working memory associated with the JPEG object.

Errors

`jpeg_finish_compress()` shall return error if the function is invoked before writing the specified number of scanlines.

jpeg_finish_decompress

Name

jpeg_finish_decompress -- complete decompression cycle

Synopsis

```
#include <jpeglib.h>
boolean jpeg_finish_decompress(j_decompress_ptr cinfo);
```

Description

The function `jpeg_finish_decompress()` shall set the decompression state to completion. Any remaining input data shall be decoded and consumed. `jpeg_finish_decompress()` shall also release working memory associated with the JPEG object.

Return Value

`jpeg_finish_decompress()` shall return `FALSE` if data source requests suspension of the decompressor. Otherwise, `jpeg_finish_decompress()` shall return `TRUE`.

Errors

`jpeg_finish_decompress()` shall return error if the function is invoked before reading the specified number of scanlines.

jpeg_finish_output

Name

jpeg_finish_output -- complete pass in buffered-image mode

Synopsis

```
#include <jpeglib.h>
boolean jpeg_finish_output(j_decompress_ptr cinfo);
```

Description

jpeg_start_output() shall change state for completion of an output pass in buffered-image mode. The scan number shall be incremented if the end-of-image marker is not reached.

Return Value

jpeg_finish_output() shall return FALSE if decompression is suspended. Otherwise, jpeg_finish_output() shall return TRUE.

jpeg_has_multiple_scans

Name

jpeg_has_multiple_scans -- test if input image has multiple scans

Synopsis

```
#include <jpeglib.h>
boolean jpeg_has_multiple_scans(j_decompress_ptr cinfo);
```

Description

jpeg_has_multiple_scans() shall return TRUE if the incoming image file has more than one scan.

Return Value

TRUE for multiple scans, FALSE otherwise.

jpeg_input_complete

Name

jpeg_input_complete -- test for end-of-image

Synopsis

```
#include <jpeglib.h>
boolean jpeg_input_complete(j_decompress_ptr cinfo);
```

Description

jpeg_input_complete() shall return TRUE if the end-of-image marker has not been read for the input image file.

Return Value

TRUE if reached EOI, FALSE otherwise.

jpeg_new_colormap

Name

jpeg_new_colormap -- switch to a new external colormap between output passes

Synopsis

```
#include <jpeglib.h>
void jpeg_new_colormap(j_decompress_ptr cinfo);
```

Description

jpeg_new_colormap() shall select 2-pass quantizer for using an external colormap and notify the quantizer of the switch to a colormap that is different from the one used in the previous pass. The new colormap must be set using cinfo.colormap before a call to jpeg_new_colormap().

jpeg_quality_scaling

Name

jpeg_quality_scaling -- convert quality scaling to percentage scaling factor

Synopsis

```
#include <jpeglib.h>
int jpeg_quality_scaling(int quality);
```

Description

The function jpeg_quality_scaling() shall convert a user-specified quality rating to a percentage scaling factor for an underlying quantization table, using IJG-recommended scaling curve. The input "quality" factor ranges from 0 to 100.

Return Value

jpeg_quality_scaling() shall return the integer value of quality as a percentage.

jpeg_read_coefficients

Name

jpeg_read_coefficients -- read the contents of JPEG file as DCT coefficients

Synopsis

```
#include <jpeglib.h>
jvirt_barray_ptr * jpeg_read_coefficients(j_decompress_ptr cinfo);
```

Description

jpeg_read_coefficients() shall return the contents of the JPEG image file as DCT coefficients. The entire image shall be read as a set of virtual coefficient-block arrays, one array per component. The return value is a pointer to an array of virtual-array descriptors.

Each block in the block arrays shall contain quantized coefficient values in normal array order and not JPEG zigzag order. The block arrays shall contain only DCT blocks containing real data; any entirely-dummy blocks added to fill out interleaved MCUs at the right or bottom edges of the image shall be discarded during reading and shall not be stored in the block arrays. The size of each block array can be determined from the width_in_blocks and height_in_blocks fields of the component's comp_info entry.

Return Value

jpeg_read_coefficients() shall return a pointer to an array of virtual-array descriptors containing DCT coefficients.

jpeg_read_header

Name

jpeg_read_header -- read start of JPEG datastream

Synopsis

```
#include <jpeglib.h>
int jpeg_read_header(j_decompress_ptr cinfo, boolean require_image);
```

Description

The function `jpeg_read_header()` shall read the JPEG datastream until the first SOS marker is encountered. The function shall initialize all decompression parameters to default values and save all tables and parameters in the decompression object structure.

Return Value

`jpeg_read_header()` shall return with one of the following return codes:

JPEG_HEADER_OK
if SOS marker is reached
JPEG_HEADER_TABLES_ONLY
for an abbreviated input image, if EOI is reached
JPEG_SUSPENDED
if data source module requests suspension of the decompressor.

Errors

`jpeg_read_header()` returns error if it encounters end-of-image and `require_image` is TRUE.

jpeg_read_raw_data

Name

jpeg_read_raw_data -- read raw downsampled image data

Synopsis

```
#include <jpeglib.h>
JDIMENSION jpeg_read_raw_data(j_decompress_ptr cinfo, JSAMPIMAGE data,
JDIMENSION max_lines);
```

Description

jpeg_read_raw_data() shall return upto max_lines number of scanlines of raw downsampled data into the JSAMPIMAGE array argument. The data buffer must be of atleast max_v_samp_factor*DCTSIZE scanlines as jpeg_read_raw_data() shall return one MCU row per call.

The passed max_lines value must be atleast (cinfo->max_v_samp_factor * DCTSIZE). Before starting the decompression sequence, cinfo->raw_data_out must be set to TRUE.

Return Value

jpeg_read_raw_data() shall return the number of scanlines processed. jpeg_read_raw_data() shall return 0 if the data source is suspended.

Errors

jpeg_read_raw_data() shall report error and exit if max_lines is less than (cinfo->max_v_samp_factor*DCTSIZE).

jpeg_read_scanlines

Name

jpeg_read_scanlines -- read scanlines of data from JPEG decompressor

Synopsis

```
#include <jpeglib.h>
JDIMENSION jpeg_read_scanlines(j_decompress_ptr cinfo, JSAMPARRAY
scanlines, JDIMENSION max_lines);
```

Description

jpeg_read_scanlines() shall return upto the maximum number of scanlines of decompressed image data. This may be less than the number requested in cases such as bottom of image, data source suspension, and operating modes that emit multiple scanlines at a time. Image data shall be returned in top-to-bottom scanline order.

Return Value

On success, jpeg_read_scanlines() shall return the number of lines actually read.

Errors

jpeg_read_scanlines() shall report a non-fatal error if the requested number of scanlines is greater than the height of the original unscaled image.

jpeg_resync_to_restart

Name

jpeg_resync_to_restart -- resync if marker other than expected restart marker found

Synopsis

```
#include <jpeglib.h>
boolean jpeg_resync_to_restart(j_decompress_ptr cinfo, int desired);
```

Description

jpeg_resync_to_restart() is the default resync procedure that a data source manager can invoke when the decompressor fails to find a restart (RSTn) marker where one is expected. The function shall find a suitable point for resuming decompression and position the input stream to the next data segment. The desired restart marker number (0..7) is passed as argument "desired".

Return Value

jpeg_resync_to_restart() shall return FALSE if decompression is suspended. Otherwise, jpeg_start_output() shall return TRUE.

jpeg_save_markers

Name

jpeg_save_markers -- save the contents of special markers

Synopsis

```
#include <jpeglib.h>

void jpeg_save_markers(j_decompress_ptr cinfo, int marker_code, unsigned
int length_limit);
```

Description

jpeg_save_markers() shall obtain length_limit bytes of special markers of type specified by marker_code. The marker_code shall take one of the following values: JPEG_COM, JPEG_APP0 - JPEG_APP15. The marker contents shall be stored in the marker field of cinfo. If length_limit is 0xFFFF, all marker bytes are saved.

jpeg_set_colorspace

Name

jpeg_set_colorspace -- set JPEG file's colorspace

Synopsis

```
#include <jpeglib.h>
void jpeg_set_colorspace(j_compress_ptr cinfo, J_COLOR_SPACE colorspace);
```

Description

jpeg_set_colorspace() shall set the JPEG file's colorspace to the given color space. The function may change the value of other compression parameters that are dependent on color space.

Errors

jpeg_set_colorspace() shall return error and exit if the state of the compression object indicates that the compression cycle has started.

jpeg_set_defaults

Name

jpeg_set_defaults -- set compression parameters to default values

Synopsis

```
#include <jpeglib.h>
void jpeg_set_defaults(j_compress_ptr cinfo);
```

Description

The function `jpeg_set_defaults()` shall set all JPEG compression parameters to default values using the input image's color space.

Errors

`jpeg_set_defaults()` shall return error and exit if the state of the compression object indicates that the compression cycle has started.

jpeg_set_linear_quality

Name

jpeg_set_linear_quality -- construct JPEG quantization tables for indicated scale factor

Synopsis

```
#include <jpeglib.h>

void jpeg_set_linear_quality(j_compress_ptr cinfo, int scale_factor,
boolean force_baseline);
```

Description

The function jpeg_set_linear_quality() shall construct JPEG quantization tables from the sample table values in JPEG specification Section K.1, multiplied by the given percentage scale factor. If "force_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

jpeg_set_marker_processor

Name

jpeg_set_marker_processor -- set processor method for COM or APPn markers

Synopsis

```
#include <jpeglib.h>

void jpeg_set_marker_processor(j_decompress_ptr cinfo, int marker_code,
    jpeg_marker_parser_method routine);
```

Description

jpeg_set_marker_processor() shall set a marker processor routine having signature `boolean jpeg_marker_parser_method()` *j_decompress_ptr cinfo*. The marker processor routine must return TRUE if the marker and its parameters are processed completely. The routine must return FALSE if it is forced to suspend before reaching the end of marker parameters.

jpeg_set_quality

Name

jpeg_set_quality -- construct JPEG quantization tables for indicated quality

Synopsis

```
#include <jpeglib.h>

void jpeg_set_quality(j_compress_ptr cinfo, int quality, boolean
force_baseline);
```

Description

The function jpeg_set_quality() shall construct JPEG quantization tables for the given quality setting. The quality value ranges from 0..100. If "force_baseline" is TRUE, the computed quantization table entries are limited to 1..255 for JPEG baseline compatibility.

jpeg_simple_progression

Name

jpeg_simple_progression -- generate scan script for writing progressive JPEG file

Synopsis

```
#include <jpeglib.h>
void jpeg_simple_progression(j_compress_ptr cinfo);
```

Description

The function jpeg_simple_progression() shall generate a default scan script for writing a progressive JPEG file.

jpeg_start_compress

Name

jpeg_start_compress -- initialize a compression cycle

Synopsis

```
#include <jpeglib.h>
void jpeg_start_compress(j_compress_ptr cinfo, boolean write_all_tables);
```

Description

The function `jpeg_start_compress()` shall initialize state for a JPEG compression cycle. The compression parameters, data destination and source image information must be set prior to the invocation of `jpeg_start_compress()`. Setting `write_all_tables` to `TRUE` shall indicate that a complete JPEG interchange datastream will be written and all Huffman tables shall be emitted. If `write_all_tables` is set to `FALSE`, the default behavior shall be to emit a pure abbreviated image with no tables.

jpeg_start_decompress

Name

jpeg_start_decompress -- initialize a decompression cycle

Synopsis

```
#include <jpeglib.h>
boolean jpeg_start_decompress(j_decompress_ptr cinfo);
```

Description

The function `jpeg_start_decompress()` shall initialize state for a JPEG decompression cycle and allocate working memory. The JPEG datastream header must be read prior to the invocation of `jpeg_start_decompress()` to obtain the parameters for decompression.

jpeg_start_output

Name

jpeg_start_output -- initialize for a pass in buffered-image mode

Synopsis

```
#include <jpeglib.h>
boolean jpeg_start_output(j_decompress_ptr cinfo, int scan_number);
```

Description

jpeg_start_output() shall initialize state for an output pass in buffered-image mode. The scan_number indicates the scan of the image to be displayed. Scan numbers start from 1. The buffered-image mode must be selected before starting an output pass by setting cinfo.buffered_image = TRUE.

Return Value

jpeg_start_output() shall return FALSE if decompression is suspended. Otherwise, jpeg_start_output() shall return TRUE.

jpeg_std_error

Name

jpeg_std_error -- update error manager with error handling routines

Synopsis

```
#include <jpeglib.h>
struct jpeg_error_mgr * jpeg_std_error(struct jpeg_error_mgr *
error_mgr);
```

Description

jpeg_std_error() shall update the given jpeg_error_mgr object with standard error handling methods.

Return Value

jpeg_std_error() shall return the updated jpeg_error_mgr object.

jpeg_stdio_dest

Name

jpeg_stdio_dest -- Initialize state for output to stdio stream

Synopsis

```
#include <jpeglib.h>
void jpeg_stdio_dest(j_compress_ptr cinfo, FILE * outfile);
```

Description

jpeg_stdio_dest() shall initialize state for output to the given stdio stream outfile. The stream outfile must be in open state.

jpeg_stdio_src

Name

jpeg_stdio_src -- Initialize state for input from stdio stream

Synopsis

```
#include <jpeglib.h>
void jpeg_stdio_src(j_decompress_ptr cinfo, FILE * infile);
```

Description

jpeg_stdio_src() shall initialize state for input from the given stdio stream infile. The stream infile must be in open state.

jpeg_suppress_tables

Name

jpeg_suppress_tables -- control quantization and Huffman table suppression

Synopsis

```
#include <jpeglib.h>
void jpeg_suppress_tables(j_compress_ptr cinfo, boolean suppress);
```

Description

The function `jpeg_suppress_tables()` forcibly suppress or un-suppresses all quantization and Huffman tables. If "suppress" is TRUE, the function shall mark all currently defined tables as already written. Otherwise, the tables will be marked as not written. This controls the emission of tables on subsequent calls to `jpeg_start_compress()`.

jpeg_write_coefficients

Name

jpeg_write_coefficients -- Compression initialization for writing raw-coefficient data

Synopsis

```
#include <jpeglib.h>

void jpeg_write_coefficients(j_compress_ptr cinfo, jvirt_barray_ptr *
coeff_arrays);
```

Description

jpeg_write_coefficients() shall write the contents of the JPEG file as DCT coefficients. The DCT coefficients shall be obtained from the array of virtual block array descriptors pointed to be "coeff_arrays". The number of arrays to be written is obtained from cinfo.num_components. Note: The virtual arrays may not be realized before jpeg_write_coefficients() is called. The virtual arrays requested from the compression object's memory manager may be realized by calling jpeg_write_coefficients() as a side-effect.

jpeg_write_m_byte

Name

jpeg_write_m_byte -- emit a byte of special marker data

Synopsis

```
#include <jpeglib.h>
void jpeg_write_m_byte(j_compress_ptr cinfo, int val);
```

Description

jpeg_write_m_byte() shall emit a byte of marker data equal to "val".

jpeg_write_m_header

Name

jpeg_write_m_header -- emit header for special marker

Synopsis

```
#include <jpeglib.h>

void jpeg_write_m_header(j_compress_ptr cinfo, int marker, unsigned int
datalen);
```

Description

jpeg_write_marker_header() shall emit the marker header. The marker header consists of the marker code derived from "marker" followed by the length of marker data "datalen".

jpeg_write_marker

Name

jpeg_write_marker -- write special marker data

Synopsis

```
#include <jpeglib.h>

void jpeg_write_marker(j_compress_ptr cinfo, int marker, const JOCTET *
dataptr, unsigned int datalen);
```

Description

jpeg_write_marker() shall emit the marker header and "datalen" number of marker bytes obtained from "*dataptr". The marker header consists of the marker code followed by the length of marker data.

jpeg_write_raw_data

Name

jpeg_write_raw_data -- write raw downsampled image data

Synopsis

```
#include <jpeglib.h>
JDIMENSION jpeg_write_raw_data(j_compress_ptr cinfo, JSAMPIMAGE data,
JDIMENSION num_lines);
```

Description

jpeg_write_raw_data() shall write the compressed image data for raw downsampled data supplied in the JSAMPIMAGE array argument. The number of scanlines passed in num_lines to jpeg_write_raw_data() is measured in terms of the component with the largest v_samp_factor.

If the image dimensions are not a multiple of the MCU size, the data must be padded to a multiple of a DCT block in each component, such that each downsampled row must contain a multiple of 8 valid samples, and there must be a multiple of 8 sample rows for each component. Data must be padded so that the passed num_lines value is atleast (cinfo->max_v_samp_factor * DCTSIZE). jpeg_write_raw_data() shall process one MCU row per call which is (cinfo->comp_info[0].v_samp_factor*DCTSIZE) sample rows of each component.

Before starting the compression sequence, cinfo->raw_data_in must be set to TRUE. cinfo->jpeg_color_space must be set to colorspace to be used in the JPEG file. The sampling factors, cinfo->comp_info[i].h_samp_factor and cinfo->comp_info[i].v_samp_factor must be set to the dimensions of the supplied data.

Return Value

jpeg_write_raw_data() shall return the number of scanlines processed. jpeg_write_raw_data() shall return 0 if the compressor is suspended.

Errors

jpeg_write_raw_data() shall report error and exit if num_lines is less than (cinfo->max_v_samp_factor*DCTSIZE).

jpeg_write_scanlines

Name

jpeg_write_scanlines -- write scanlines of data to JPEG compressor

Synopsis

```
#include <jpeglib.h>
JDIMENSION jpeg_write_scanlines(j_compress_ptr cinfo, JSAMPARRAY
scanlines, JDIMENSION num_lines);
```

Description

jpeg_write_scanlines() shall write the number of scanlines of image data to be compressed from in-memory buffers. The image data shall be written in top-to-bottom scanline order.

Return Value

On success, jpeg_read_scanlines() shall return the number of lines actually written.

Errors

jpeg_write_scanlines() shall report a non-fatal error if the requested number of scanlines is greater than the height of the original unscaled image.

jpeg_write_tables

Name

jpeg_write_tables -- create a tables-only file

Synopsis

```
#include <jpeglib.h>
void jpeg_write_tables(j_compress_ptr cinfo);
```

Description

jpeg_write_tables() shall create a tables-only file by writing an abbreviated datastream containing only SOI, DQT and/or DHT and EOI markers. All the quantization and Huffman tables currently defined in the compression object shall be emitted unless their sent_table flag is set to TRUE. Once emitted, sent_table flag shall be set for all tables written.

An LSB conforming implementation shall provide the generic deprecated functions for Font Customization and Configuration Library specified in [Table 10-3](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 10-3. libfontconfig - Font Customization and Configuration Library Deprecated Function Interfaces

FcConfigGetCache [fontconfig]	FcDirSave [fontconfig]	FcDirScan [fontconfig]
FcFontSetSortDestroy [fontconfig]		

10.2. Data Definitions for libfontconfig

This section defines global identifiers and their values that are associated with interfaces contained in libfontconfig. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

10.2.1. fontconfig/fcfreeType.h

```

Chapter 11. Commands and Utilities

11.1. Commands and Utilities

An LSB conforming implementation shall provide the commands and utilities as described in [Table 11-1](#), with at least the behavior described as mandatory in the referenced underlying specification, with the following exceptions:

1. If any operand (except one which follows `--`) starts with a hyphen, the behavior is unspecified.

Rationale (Informative): Applications should place options before operands, or use `--`, as needed. This text is needed because, by default, GNU option parsing differs from POSIX, unless the environment variable `POSIXLY_CORRECT` is set. For example, `ls . -a` in GNU `ls` means to list the current directory, showing all files (that is, `"."` is an operand and `-a` is an option). In POSIX, `"."` and `-a` are both operands, and the command means to list the current directory, and also the file named `-a`. Suggesting that applications rely on the setting of the `POSIXLY_CORRECT` environment variable, or try to set it, seems worse than just asking the applications to invoke commands in ways which work with either the POSIX or GNU behaviors.

[\[1\]. This Specification](#)

11.2. Command Behavior

Table of Contents

[fc-cache](#) -- build font information cache files

[fc-list](#) -- list available fonts.

[fc-match](#) -- match available fonts

This section contains descriptions for commands and utilities whose specified behavior in the LSB contradicts or extends the standards referenced. It also contains commands and utilities only required by the LSB and not specified by other standards.

fc-cache

Name

fc-cache -- build font information cache files

Description

fc-cache scans the font directories on the system and builds font information cache files for applications using fontconfig for their font handling. If directory arguments are not given, fc-cache uses each directory in the current font configuration. Each directory is scanned for font files readable by FreeType. A cache is created which contains properties of each font and the associated filename. This cache is used to speed up application startup when using the fontconfig library.

Synopsis

```
fc-cache [ -fsvV? ] [ --force ] [ --system-only ] [ --verbose ] [ --version ] [ --help ] [ dirs ]
```

Option and Operand Handling

This program follows the usual GNU command line syntax, with long options starting with two dashes ('-'). A summary of options is included below.

<i>-f --force</i>	Force re-generation of apparently up-to-date cache files, overriding the timestamp checking.
<i>-s --system-only</i>	Only scan system-wide directories, omitting the places located in the user's home directory.
<i>-v --verbose</i>	Display status information while busy.
<i>-? --help</i>	Show summary of options.
<i>-V --version</i>	Show version of the program and exit.
<i>dirs</i>	A list of directories to scan for fonts.

fc-list

Name

fc-list -- list available fonts.

Description

fc-list lists fonts and styles available on the system for applications using fontconfig.

Synopsis

```
fc-list [ -vV? ] [ --verbose ] [ --version ] [ --help ] [ pattern ] [ element ]
```

Option and Operand Handling

This program follows the usual GNU command line syntax, with long options starting with two dashes ('-'). A summary of options is included below.

<i>-v</i> <i>--verbose</i>	Display status information while busy.
<i>-?</i> <i>--help</i>	Show summary of options.
<i>-V</i> <i>--version</i>	Show version of the program and exit.
<i>pattern</i>	If this argument is set, only fonts matching pattern are displayed.
<i>element</i>	If set, the element property is displayed for matching fonts.

fc-match

Name

fc-match -- match available fonts

Description

fc-match matches font-pattern (empty pattern by default) using the normal fontconfig matching rules to find the best font available. If --sort is given, the sorted list of best matching fonts is displayed. With --verbose, the whole font pattern for each match is printed, otherwise only the file, family and style are printed.

12.2. Data Definitions for libfreetype

This section defines global identifiers and their values that are associated with interfaces contained in libfreetype. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

12.3. Interface Definitions for libfreetype

Table of Contents

FT_Get_X11_Font_Format -- Get font format

The interfaces defined on the following pages are included in libfreetype and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 12.1](#) shall behave as described in the referenced base document.

FT_Get_X11_Font_Format

Name

FT_Get_X11_Font_Format -- Get font format

Synopsis

```
#include <freetype/ftxf86.h>
const char *FT_Get_X11_Font_Format (FT_Face face);
```

Description

The `FT_Get_X11_Font_Format()` function can be used to return a string describing the format of the font face referenced by *face*.

Note that this information is not needed normally; however, there are special cases (like in PDF devices) where it is important to differentiate, in spite of FreeType's uniform API.

Return Value

The `FT_Get_X11_Font_Format()` function returns a string describing the format of a given face, using values which can be used as an `X11 FONT_PROPERTY`. Possible values are TrueType, Type 1, BDF, PCF, Type 42, CID Type 1, CFF, PFR, and Windows FNT. In case of an error, `NULL` is returned.

Chapter 13. Libraries

13.1. Interfaces for libXft

Table 13-1 defines the library name and shared object name for the libXft library

Table 13-1. libXft Definition

Library:	libXft
SONAME:	libXft.so.2

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

13.1.1. X FreeType Library

13.1.1.1. Interfaces for X FreeType Library

An LSB conforming implementation shall provide the generic functions for X FreeType Library specified in Table 13-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 13-2. libXft - X FreeType Library Function Interfaces

13.2. Data Definitions for libXft

This section defines global identifiers and their values that are associated with interfaces contained in libXft. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

13.3. Interface Definitions for libXft

The interfaces defined on the following pages are included in libXft and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 13.1](#) shall behave as described in the referenced base document.

IX. Xrender library

Table of Contents

14. Libraries

14.1. Interfaces for libXrender

14.1.1. X Rendering Extension

14.2. Data Definitions for libXrender

14.2.1. X11/extensions/Xrender.h

14.2.2. X11/extensions/render.h

14.3. Interface Definitions for libXrender

Chapter 14. Libraries

14.1. Interfaces for libXrender

Table 14-1 defines the library name and shared object name for the libXrender library

Table 14-1. libXrender Definition

Library:	libXrender
SONAME:	libXrender.so.1

The behavior of the interfaces in this library is specified by the following specifications:

[LSB] [This Specification](#)

14.1.1. X Rendering Extension

14.1.1.1. Interfaces for X Rendering Extension

An LSB conforming implementation shall provide the generic functions for X Rendering Extension specified in Table 14-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 14-2. libXrender - X Rendering Extension Function Interfaces

XRenderAddGlyphs [LSB]	XRenderAddTraps [LSB]	XRenderChangePicture [LSB]

XRenderSetPictureTransform [LSB]	XRenderSetSubpixelOrder [LSB]	

14.2. Data Definitions for libXrender

This section defines global identifiers and their values that are associated with interfaces contained in libXrender. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

14.2.1. X11/extensions/Xrender.h

14.3. Interface Definitions for libXrender

The interfaces defined on the following pages are included in libXrender and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 14.1](#) shall behave as described in the referenced base document.

15.1. Interfaces for libcairo

Table 15-1 defines the library name and shared object name for the libcairo library

Table 15-1. libcairo Definition

Library:	libcairo
SONAME:	libcairo.so.2

The behavior of the interfaces in this library is specified by the following specifications:

[Cairo 1.2.0] [Cairo API Reference](#)

15.1.1. Cairo Vector Graphics Library

15.1.1.1. Interfaces for Cairo Vector Graphics Library

An LSB conforming implementation shall provide the generic functions for Cairo Vector Graphics Library specified in Table 15-2, with the full mandatory functionality as described in the referenced underlying specification.

15.2. Data Definitions for libcairo

This section defines global identifiers and their values that are associated with interfaces contained in libcairo. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

Chapter 16. Libraries

16.1. Introduction

A conforming implementation shall support the following GTK+ stack libraries which provide interfaces for creating rich graphical user interface applications.

GLib	A general-purpose utility library, not specific to graphical user interfaces. GLib provides many useful data types, macros, type conversions, string utilities, file utilities, a main loop abstraction, and so on.
	libglib-2.0
	libgmodule-2.0
	libgobject-2.0
	libgthread-2.0
ATK	ATK is the Accessibility Toolkit. It provides a set of generic interfaces allowing accessibility technologies to interact with a graphical user interface. For example, a screen reader uses ATK to discover the text in an interface and read it to blind users. GTK+ widgets have built-in support for accessibility using the ATK framework.
	libatk-1.0
Pango	Pango is a library for internationalized text handling. It centers around the PangoLayout object, representing a paragraph of text. Pango provides the engine for GtkTextView, GtkLabel, GtkEntry, and other widgets that display text.
	libpango-1.0
	libpangocairo-1.0
	libpangoft2-1.0
GdkPixbuf	This is a small library which allows you to create GdkPixbuf ("pixel buffer") objects from image data or image files. Use a GdkPixbuf in combination with GtkImage to display images.
	libgdk_pixbuf-2.0
	libgdk_pixbuf_xlib-2.0
GDK	GDK is the abstraction layer that allows GTK+ to support multiple windowing systems. GDK provides drawing and window system facilities on X11, Windows, and the Linux framebuffer device.
	libgdk-x11-2.0
GTK+	The GTK+ library contains widgets, that is, GUI components such as GtkButton or GtkTextView.

libgtk-x11-2.0

There are three main parts to the definition of each of these libraries.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although presented in the form of header files for convenience, should not be taken as representing complete header files, as they are a supplement to the source specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

Note: While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

16.2. Interfaces for libglib-2.0

Table 16-1 defines the library name and shared object name for the libglib-2.0 library

Table 16-1. libglib-2.0 Definition

Library:	libglib-2.0
SONAME:	libglib-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Glib 2.12] [Glib 2.12.13 Reference Manual](#)

[LSB] [This Specification](#)

16.2.1. GTK General purpose utility library

16.2.1.1. Interfaces for GTK General purpose utility library

An LSB conforming implementation shall provide the generic functions for GTK General purpose utility library specified in Table 16-2, with the full mandatory functionality as described in the referenced underlying specification.

Table 16-2. libglib-2.0 - GTK General purpose utility library Function Interfaces

<code>g_assert_warning</code> [Glib 2.12]	<code>g_once_impl</code> [Glib 2.12]
<code>g_return_if_fail_warning</code> [Glib 2.12]	<code>g_static_mutex_get_mutex_impl</code> [Glib 2.12]

An LSB conforming implementation shall provide the generic data interfaces for GTK General purpose utility library specified in [Table 16-3](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-3. libglib-2.0 - GTK General purpose utility library Data Interfaces

<code>g_ascii_table</code> [Glib 2.12]	<code>g_child_watch_funcs</code> [Glib 2.12]
<code>g_idle_funcs</code> [Glib 2.12]	<code>g_io_watch_funcs</code> [Glib 2.12]
<code>g_thread_functions_for_glib_use</code> [Glib 2.12]	<code>g_thread_use_default_impl</code> [Glib 2.12]
<code>g_threads_got_initialized</code> [Glib 2.12]	<code>g_timeout_funcs</code> [Glib 2.12]
<code>g_utf8_skip</code> [Glib 2.12]	

16.2.2. Glib Arrays

16.2.2.1. Interfaces for Glib Arrays

An LSB conforming implementation shall provide the generic functions for Glib Arrays specified in [Table 16-4](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-4. libglib-2.0 - Glib Arrays Function Interfaces

<code>g_array_append_vals</code> [Glib 2.12]	<code>g_array_free</code> [Glib 2.12]
<code>g_array_insert_vals</code> [Glib 2.12]	<code>g_array_new</code> [Glib 2.12]
<code>g_array_prepend_vals</code> [Glib 2.12]	<code>g_array_remove_index</code> [Glib 2.12]
<code>g_array_remove_index_fast</code> [Glib 2.12]	<code>g_array_remove_range</code> [Glib 2.12]
<code>g_array_set_size</code> [Glib 2.12]	<code>g_array_sized_new</code> [Glib 2.12]
<code>g_array_sort</code> [Glib 2.12]	<code>g_array_sort_with_data</code> [Glib 2.12]

16.2.3. Glib Asynchronous Queues

16.2.3.1. Interfaces for Glib Asynchronous Queues

An LSB conforming implementation shall provide the generic functions for Glib Asynchronous Queues specified in [Table 16-5](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-5. libglib-2.0 - Glib Asynchronous Queues Function Interfaces

g_async_queue_length [Glib 2.12]	g_async_queue_length_unlocked [Glib 2.12]
g_async_queue_lock [Glib 2.12]	g_async_queue_new [Glib 2.12]
g_async_queue_pop [Glib 2.12]	g_async_queue_pop_unlocked [Glib 2.12]
g_async_queue_push [Glib 2.12]	g_async_queue_push_sorted [Glib 2.12]
g_async_queue_push_sorted_unlocked [Glib 2.12]	g_async_queue_push_unlocked [Glib 2.12]
g_async_queue_ref [Glib 2.12]	g_async_queue_sort [Glib 2.12]
g_async_queue_sort_unlocked [Glib 2.12]	g_async_queue_timed_pop [Glib 2.12]
g_async_queue_timed_pop_unlocked [Glib 2.12]	g_async_queue_try_pop [Glib 2.12]
g_async_queue_try_pop_unlocked [Glib 2.12]	g_async_queue_unlock [Glib 2.12]
g_async_queue_unref [Glib 2.12]	

16.2.4. Glib Atomic Operations

16.2.4.1. Interfaces for Glib Atomic Operations

An LSB conforming implementation shall provide the generic functions for Glib Atomic Operations specified in [Table 16-6](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-6. libglib-2.0 - Glib Atomic Operations Function Interfaces

g_atomic_int_add [Glib 2.12]	g_atomic_int_compare_and_exchange [Glib 2.12]
g_atomic_int_exchange_and_add [Glib 2.12]	g_atomic_pointer_compare_and_exchange [Glib 2.12]

16.2.5. Glib Automatic String Completion

16.2.5.1. Interfaces for Glib Automatic String Completion

An LSB conforming implementation shall provide the generic functions for Glib Automatic String Completion specified in [Table 16-7](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-7. libglib-2.0 - Glib Automatic String Completion Function Interfaces

g_completion_add_items [Glib 2.12]	g_completion_clear_items [Glib 2.12]
g_completion_complete [Glib 2.12]	g_completion_complete_utf8 [Glib 2.12]
g_completion_free [Glib 2.12]	g_completion_new [Glib 2.12]
g_completion_remove_items [Glib 2.12]	g_completion_set_compare [Glib 2.12]

An LSB conforming implementation shall provide the generic deprecated functions for Glib Automatic String Completion specified in [Table 16-8](#), with the full mandatory functionality as described in the referenced

underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-8. libglib-2.0 - Glib Automatic String Completion Deprecated Function Interfaces

g_completion_add_items [Glib 2.12]	g_completion_clear_items [Glib 2.12]
g_completion_complete [Glib 2.12]	g_completion_complete_utf8 [Glib 2.12]
g_completion_free [Glib 2.12]	g_completion_new [Glib 2.12]
g_completion_remove_items [Glib 2.12]	g_completion_set_compare [Glib 2.12]

16.2.6. Glib Balanced Binary Trees

16.2.6.1. Interfaces for Glib Balanced Binary Trees

An LSB conforming implementation shall provide the generic functions for Glib Balanced Binary Trees specified in [Table 16-9](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-9. libglib-2.0 - Glib Balanced Binary Trees Function Interfaces

g_tree_destroy [Glib 2.12]	g_tree_foreach [Glib 2.12]
g_tree_height [Glib 2.12]	g_tree_insert [Glib 2.12]
g_tree_lookup [Glib 2.12]	g_tree_lookup_extended [Glib 2.12]
g_tree_new [Glib 2.12]	g_tree_new_full [Glib 2.12]
g_tree_new_with_data [Glib 2.12]	g_tree_nnodes [Glib 2.12]
g_tree_remove [Glib 2.12]	g_tree_replace [Glib 2.12]
g_tree_search [Glib 2.12]	g_tree_steal [Glib 2.12]

16.2.7. Glib Byte Arrays

16.2.7.1. Interfaces for Glib Byte Arrays

An LSB conforming implementation shall provide the generic functions for Glib Byte Arrays specified in [Table 16-10](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-10. libglib-2.0 - Glib Byte Arrays Function Interfaces

g_byte_array_append [Glib 2.12]	g_byte_array_free [Glib 2.12]

g_byte_array_new [Glib 2.12]	g_byte_array_prepend [Glib 2.12]
g_byte_array_remove_index [Glib 2.12]	g_byte_array_remove_index_fast [Glib 2.12]
g_byte_array_remove_range [Glib 2.12]	g_byte_array_set_size [Glib 2.12]
g_byte_array_sized_new [Glib 2.12]	g_byte_array_sort [Glib 2.12]
g_byte_array_sort_with_data [Glib 2.12]	

16.2.8. Glib Caches

16.2.8.1. Interfaces for Glib Caches

An LSB conforming implementation shall provide the generic functions for Glib Caches specified in [Table 16-11](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-11. libglib-2.0 - Glib Caches Function Interfaces

g_cache_destroy [Glib 2.12]	g_cache_insert [Glib 2.12]
g_cache_key_foreach [Glib 2.12]	g_cache_new [Glib 2.12]
g_cache_remove [Glib 2.12]	g_cache_value_foreach [LSB]

An LSB conforming implementation shall provide the generic deprecated functions for Glib Caches specified in [Table 16-12](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-12. libglib-2.0 - Glib Caches Deprecated Function Interfaces

g_cache_value_foreach [LSB]	

16.2.9. Glib Character Set Conversion

16.2.9.1. Interfaces for Glib Character Set Conversion

An LSB conforming implementation shall provide the generic functions for Glib Character Set Conversion specified in [Table 16-13](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-13. libglib-2.0 - Glib Character Set Conversion Function Interfaces

g_convert [Glib 2.12]	g_convert_error_quark [Glib 2.12]

g_option_group_set_translation_domain [Glib 2.12]	

16.2.11. Glib Datasets

16.2.11.1. Interfaces for Glib Datasets

An LSB conforming implementation shall provide the generic functions for Glib Datasets specified in [Table 16-15](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-15. libglib-2.0 - Glib Datasets Function Interfaces

g_dataset_destroy [Glib 2.12]	g_dataset_foreach [Glib 2.12]
g_dataset_id_get_data [Glib 2.12]	g_dataset_id_remove_no_notify [Glib 2.12]
g_dataset_id_set_data_full [Glib 2.12]	

16.2.12. Glib Date and Time Functions

16.2.12.1. Interfaces for Glib Date and Time Functions

An LSB conforming implementation shall provide the generic functions for Glib Date and Time Functions specified in [Table 16-16](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-16. libglib-2.0 - Glib Date and Time Functions Function Interfaces

g_date_add_days [Glib 2.12]	g_date_add_months [Glib 2.12]
g_date_add_years [Glib 2.12]	g_date_clamp [Glib 2.12]

g_list_reverse [Glib 2.12]	g_list_sort [Glib 2.12]
g_list_sort_with_data [Glib 2.12]	

An LSB conforming implementation shall provide the generic deprecated functions for Glib Doubly-Linked Lists specified in [Table 16-20](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-20. libglib-2.0 - Glib Doubly-Linked Lists Deprecated Function Interfaces

g_list_pop_allocator [Glib 2.12]	g_list_push_allocator [Glib 2.12]

16.2.15. Glib Error Reporting

16.2.15.1. Interfaces for Glib Error Reporting

An LSB conforming implementation shall provide the generic functions for Glib Error Reporting specified in [Table 16-21](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-21. libglib-2.0 - Glib Error Reporting Function Interfaces

g_clear_error [Glib 2.12]	g_error_copy [Glib 2.12]
g_error_free [Glib 2.12]	g_error_matches [Glib 2.12]
g_error_new [Glib 2.12]	g_error_new_literal [Glib 2.12]
g_propagate_error [Glib 2.12]	g_set_error [Glib 2.12]

16.2.16. Glib File Utilities

16.2.16.1. Interfaces for Glib File Utilities

An LSB conforming implementation shall provide the generic functions for Glib File Utilities specified in [Table 16-22](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-22. libglib-2.0 - Glib File Utilities Function Interfaces

g_dir_close [Glib 2.12]	g_dir_open [Glib 2.12]
g_dir_read_name [Glib 2.12]	g_dir_rewind [Glib 2.12]
g_file_error_from_errno [Glib 2.12]	g_file_error_quark [Glib 2.12]
g_file_get_contents [Glib 2.12]	g_file_open_tmp [Glib 2.12]
g_file_read_link [Glib 2.12]	g_file_set_contents [Glib 2.12]
g_file_test [Glib 2.12]	g_mapped_file_free [Glib 2.12]
g_mapped_file_get_contents [Glib 2.12]	g_mapped_file_get_length [Glib 2.12]
g_mapped_file_new [Glib 2.12]	g_mkstemp [Glib 2.12]

16.2.17. Glib Glob-Style Pattern Matching

16.2.17.1. Interfaces for Glib Glob-Style Pattern Matching

An LSB conforming implementation shall provide the generic functions for Glib Glob-Style Pattern Matching specified in [Table 16-23](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-23. libglib-2.0 - Glib Glob-Style Pattern Matching Function Interfaces

g_pattern_match [Glib 2.12]	g_pattern_match_simple [Glib 2.12]
g_pattern_match_string [Glib 2.12]	g_pattern_spec_equal [Glib 2.12]
g_pattern_spec_free [Glib 2.12]	g_pattern_spec_new [Glib 2.12]

16.2.18. Glib Hash Tables

16.2.18.1. Interfaces for Glib Hash Tables

An LSB conforming implementation shall provide the generic functions for Glib Hash Tables specified in [Table 16-24](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-24. libglib-2.0 - Glib Hash Tables Function Interfaces

g_direct_equal [Glib 2.12]	g_direct_hash [Glib 2.12]
g_hash_table_destroy [Glib 2.12]	g_hash_table_find [Glib 2.12]

g_hash_table_remove_all [Glib 2.12]	g_hash_table_replace [Glib 2.12]
g_hash_table_size [Glib 2.12]	g_hash_table_steal [Glib 2.12]
g_hash_table_steal_all [Glib 2.12]	g_hash_table_unref [Glib 2.12]
g_int_equal [Glib 2.12]	g_int_hash [Glib 2.12]
g_str_equal [Glib 2.12]	g_str_hash [Glib 2.12]

16.2.19. Glib Hook Functions

16.2.19.1. Interfaces for Glib Hook Functions

An LSB conforming implementation shall provide the generic functions for Glib Hook Functions specified in [Table 16-25](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-25. libglib-2.0 - Glib Hook Functions Function Interfaces

g_hook_alloc [Glib 2.12]	g_hook_compare_ids [Glib 2.12]
g_hook_destroy [Glib 2.12]	g_hook_destroy_link [Glib 2.12]
g_hook_find [Glib 2.12]	g_hook_find_data [Glib 2.12]
g_hook_find_func [Glib 2.12]	g_hook_find_func_data [Glib 2.12]
g_hook_first_valid [Glib 2.12]	g_hook_free [Glib 2.12]
g_hook_get [Glib 2.12]	g_hook_insert_before [Glib 2.12]
g_hook_insert_sorted [Glib 2.12]	g_hook_list_clear [Glib 2.12]
g_hook_list_init [Glib 2.12]	g_hook_list_invoke [Glib 2.12]
g_hook_list_invoke_check [Glib 2.12]	g_hook_list_marshall [Glib 2.12]
g_hook_list_marshall_check [Glib 2.12]	g_hook_next_valid [Glib 2.12]
g_hook_prepend [Glib 2.12]	g_hook_ref [Glib 2.12]
g_hook_unref [Glib 2.12]	

16.2.20. Glib IO Channels

16.2.20.1. Interfaces for Glib IO Channels

An LSB conforming implementation shall provide the generic functions for Glib IO Channels specified in [Table 16-26](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-26. libglib-2.0 - Glib IO Channels Function Interfaces

g_io_add_watch [Glib 2.12]	g_io_add_watch_full [Glib 2.12]
g_io_channel_error_from_errno [Glib 2.12]	g_io_channel_error_quark [Glib 2.12]

g_io_channel_seek_position [Glib 2.12]	g_io_channel_set_buffer_size [Glib 2.12]
g_io_channel_set_buffered [Glib 2.12]	g_io_channel_set_close_on_unref [Glib 2.12]
g_io_channel_set_encoding [Glib 2.12]	g_io_channel_set_flags [Glib 2.12]
g_io_channel_set_line_term [Glib 2.12]	g_io_channel_shutdown [Glib 2.12]
g_io_channel_unix_get_fd [Glib 2.12]	g_io_channel_unix_new [Glib 2.12]
g_io_channel_unref [Glib 2.12]	g_io_channel_write_chars [Glib 2.12]
g_io_channel_write_unichar [Glib 2.12]	g_io_create_watch [Glib 2.12]

16.2.21. Glib Internationalization

16.2.21.1. Interfaces for Glib Internationalization

An LSB conforming implementation shall provide the generic functions for Glib Internationalization specified in [Table 16-27](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-27. libglib-2.0 - Glib Internationalization Function Interfaces

g_get_language_names [Glib 2.12]	g_strip_context [Glib 2.12]

16.2.22. Glib Key-Value File Parser

16.2.22.1. Interfaces for Glib Key-Value File Parser

An LSB conforming implementation shall provide the generic functions for Glib Key-Value File Parser specified in [Table 16-28](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-28. libglib-2.0 - Glib Key-Value File Parser Function Interfaces

g_key_file_error_quark [Glib 2.12]	g_key_file_free [Glib 2.12]
g_key_file_get_boolean [Glib 2.12]	g_key_file_get_boolean_list [Glib 2.12]
g_key_file_get_comment [Glib 2.12]	g_key_file_get_double [Glib 2.12]
g_key_file_get_double_list [Glib 2.12]	g_key_file_get_groups [Glib 2.12]
g_key_file_get_integer [Glib 2.12]	g_key_file_get_integer_list [Glib 2.12]
g_key_file_get_keys [Glib 2.12]	g_key_file_get_locale_string [Glib 2.12]
g_key_file_get_locale_string_list [Glib 2.12]	g_key_file_get_start_group [Glib 2.12]
g_key_file_get_string [Glib 2.12]	g_key_file_get_string_list [Glib 2.12]
g_key_file_get_value [Glib 2.12]	g_key_file_has_group [Glib 2.12]
g_key_file_has_key [Glib 2.12]	g_key_file_load_from_data [Glib 2.12]
g_key_file_load_from_data_dirs [Glib 2.12]	g_key_file_load_from_file [Glib 2.12]
g_key_file_new [Glib 2.12]	g_key_file_remove_comment [Glib 2.12]
g_key_file_remove_group [Glib 2.12]	g_key_file_remove_key [Glib 2.12]
g_key_file_set_boolean [Glib 2.12]	g_key_file_set_boolean_list [Glib 2.12]
g_key_file_set_comment [Glib 2.12]	g_key_file_set_double [Glib 2.12]
g_key_file_set_double_list [Glib 2.12]	g_key_file_set_integer [Glib 2.12]
g_key_file_set_integer_list [Glib 2.12]	g_key_file_set_list_separator [Glib 2.12]
g_key_file_set_locale_string [Glib 2.12]	g_key_file_set_locale_string_list [Glib 2.12]
g_key_file_set_string [Glib 2.12]	g_key_file_set_string_list [Glib 2.12]
g_key_file_set_value [Glib 2.12]	g_key_file_to_data [Glib 2.12]

16.2.23. Glib Keyed Data Lists

16.2.23.1. Interfaces for Glib Keyed Data Lists

An LSB conforming implementation shall provide the generic functions for Glib Keyed Data Lists specified in [Table 16-29](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-29. libglib-2.0 - Glib Keyed Data Lists Function Interfaces

g_datalist_clear [Glib 2.12]	g_datalist_foreach [Glib 2.12]
g_datalist_get_flags [Glib 2.12]	g_datalist_id_get_data [Glib 2.12]
g_datalist_id_remove_no_notify [Glib 2.12]	g_datalist_id_set_data_full [Glib 2.12]
g_datalist_init [Glib 2.12]	g_datalist_set_flags [Glib 2.12]
g_datalist_unset_flags [Glib 2.12]	

16.2.24. Glib Lexical Scanner

16.2.24.1. Interfaces for Glib Lexical Scanner

An LSB conforming implementation shall provide the generic functions for Glib Lexical Scanner specified in [Table 16-30](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-30. libglib-2.0 - Glib Lexical Scanner Function Interfaces

g_scanner_cur_line [Glib 2.12]	g_scanner_cur_position [Glib 2.12]
g_scanner_cur_token [Glib 2.12]	g_scanner_cur_value [Glib 2.12]
g_scanner_destroy [Glib 2.12]	g_scanner_eof [Glib 2.12]
g_scanner_error [Glib 2.12]	g_scanner_get_next_token [Glib 2.12]
g_scanner_input_file [Glib 2.12]	g_scanner_input_text [Glib 2.12]
g_scanner_lookup_symbol [Glib 2.12]	g_scanner_new [Glib 2.12]
g_scanner_peek_next_token [Glib 2.12]	g_scanner_scope_add_symbol [Glib 2.12]
g_scanner_scope_foreach_symbol [Glib 2.12]	g_scanner_scope_lookup_symbol [Glib 2.12]
g_scanner_scope_remove_symbol [Glib 2.12]	g_scanner_set_scope [Glib 2.12]
g_scanner_sync_file_offset [Glib 2.12]	g_scanner_unexp_token [Glib 2.12]
g_scanner_warn [Glib 2.12]	

16.2.25. Glib Memory Allocation

16.2.25.1. Interfaces for Glib Memory Allocation

An LSB conforming implementation shall provide the generic functions for Glib Memory Allocation specified in [Table 16-31](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-31. libglib-2.0 - Glib Memory Allocation Function Interfaces

g_free [Glib 2.12]	g_malloc [Glib 2.12]
g_malloc0 [Glib 2.12]	g_mem_is_system_malloc [Glib 2.12]
g_mem_profile [Glib 2.12]	g_mem_set_vtable [Glib 2.12]
g_memdup [Glib 2.12]	g_realloc [Glib 2.12]
g_try_malloc [Glib 2.12]	g_try_realloc [Glib 2.12]

An LSB conforming implementation shall provide the generic data interfaces for Glib Memory Allocation specified in [Table 16-32](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-32. libglib-2.0 - Glib Memory Allocation Data Interfaces

g_mem_gc_friendly [Glib 2.12]	

16.2.26. Glib Memory Allocators

16.2.26.1. Interfaces for Glib Memory Allocators

An LSB conforming implementation shall provide the generic functions for Glib Memory Allocators specified in [Table 16-33](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-33. libglib-2.0 - Glib Memory Allocators Function Interfaces

g_allocator_free [Glib 2.12]	g_allocator_new [Glib 2.12]

16.2.27. Glib Memory Chunks

16.2.27.1. Interfaces for Glib Memory Chunks

An LSB conforming implementation shall provide the generic functions for Glib Memory Chunks specified in [Table 16-34](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-34. libglib-2.0 - Glib Memory Chunks Function Interfaces

<code>g_blow_chunks</code> [Glib 2.12]	<code>g_mem_chunk_alloc</code> [Glib 2.12]
<code>g_mem_chunk_alloc0</code> [Glib 2.12]	<code>g_mem_chunk_clean</code> [Glib 2.12]
<code>g_mem_chunk_destroy</code> [Glib 2.12]	<code>g_mem_chunk_free</code> [Glib 2.12]
<code>g_mem_chunk_info</code> [Glib 2.12]	<code>g_mem_chunk_new</code> [Glib 2.12]
<code>g_mem_chunk_print</code> [Glib 2.12]	<code>g_mem_chunk_reset</code> [Glib 2.12]

An LSB conforming implementation shall provide the generic deprecated functions for Glib Memory Chunks specified in [Table 16-35](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-35. libglib-2.0 - Glib Memory Chunks Deprecated Function Interfaces

<code>g_blow_chunks</code> [Glib 2.12]	<code>g_mem_chunk_alloc</code> [Glib 2.12]
<code>g_mem_chunk_alloc0</code> [Glib 2.12]	<code>g_mem_chunk_clean</code> [Glib 2.12]
<code>g_mem_chunk_destroy</code> [Glib 2.12]	<code>g_mem_chunk_free</code> [Glib 2.12]
<code>g_mem_chunk_info</code> [Glib 2.12]	<code>g_mem_chunk_new</code> [Glib 2.12]
<code>g_mem_chunk_print</code> [Glib 2.12]	<code>g_mem_chunk_reset</code> [Glib 2.12]

16.2.28. Glib Message Logging

16.2.28.1. Interfaces for Glib Message Logging

An LSB conforming implementation shall provide the generic functions for Glib Message Logging specified in [Table 16-36](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-36. libglib-2.0 - Glib Message Logging Function Interfaces

<code>g_log</code> [Glib 2.12]	<code>g_log_default_handler</code> [Glib 2.12]
<code>g_log_remove_handler</code> [Glib 2.12]	<code>g_log_set_always_fatal</code> [Glib 2.12]
<code>g_log_set_default_handler</code> [Glib 2.12]	<code>g_log_set_fatal_mask</code> [Glib 2.12]
<code>g_log_set_handler</code> [Glib 2.12]	<code>g_logv</code> [Glib 2.12]

16.2.29. Glib Message Output and Debugging Functions

16.2.29.1. Interfaces for Glib Message Output and Debugging Functions

An LSB conforming implementation shall provide the generic functions for Glib Message Output and Debugging Functions specified in [Table 16-37](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-37. libglib-2.0 - Glib Message Output and Debugging Functions Function Interfaces

g_on_error_query [Glib 2.12]	g_on_error_stack_trace [Glib 2.12]
g_print [Glib 2.12]	g_printerr [Glib 2.12]
g_set_print_handler [Glib 2.12]	g_set_printerr_handler [Glib 2.12]

16.2.30. Glib Miscellaneous Utility Functions

16.2.30.1. Interfaces for Glib Miscellaneous Utility Functions

An LSB conforming implementation shall provide the generic functions for Glib Miscellaneous Utility Functions specified in [Table 16-38](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-38. libglib-2.0 - Glib Miscellaneous Utility Functions Function Interfaces

g_atexit [Glib 2.12]	g_bit_nth_lsf [Glib 2.12]
g_bit_nth_msf [Glib 2.12]	g_bit_storage [Glib 2.12]
g_build_filename [Glib 2.12]	g_build_filenamev [Glib 2.12]
g_build_path [Glib 2.12]	g_build_pathv [Glib 2.12]
g_find_program_in_path [Glib 2.12]	g_get_application_name [Glib 2.12]
g_get_current_dir [Glib 2.12]	g_get_home_dir [Glib 2.12]
g_get_host_name [Glib 2.12]	g_get_prpname [Glib 2.12]
g_get_real_name [Glib 2.12]	g_get_system_config_dirs [Glib 2.12]
g_get_system_data_dirs [Glib 2.12]	g_get_tmp_dir [Glib 2.12]
g_get_user_cache_dir [Glib 2.12]	g_get_user_config_dir [Glib 2.12]
g_get_user_data_dir [Glib 2.12]	g_get_user_name [Glib 2.12]
g_getenv [Glib 2.12]	g_listenv [Glib 2.12]
g_nullify_pointer [Glib 2.12]	g_parse_debug_string [Glib 2.12]
g_path_get_basename [Glib 2.12]	g_path_get_dirname [Glib 2.12]

g_path_is_absolute [Glib 2.12]	g_path_skip_root [Glib 2.12]
g_qsort_with_data [Glib 2.12]	g_set_application_name [Glib 2.12]
g_set_prgrname [Glib 2.12]	g_setenv [Glib 2.12]
g_spaced_primes_closest [Glib 2.12]	g_unsetenv [Glib 2.12]

16.2.31. Glib N-ary Trees

16.2.31.1. Interfaces for Glib N-ary Trees

An LSB conforming implementation shall provide the generic functions for Glib N-ary Trees specified in [Table 16-39](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-39. libglib-2.0 - Glib N-ary Trees Function Interfaces

g_node_child_index [Glib 2.12]	g_node_child_position [Glib 2.12]
g_node_children_foreach [Glib 2.12]	g_node_copy [Glib 2.12]
g_node_copy_deep [Glib 2.12]	g_node_depth [Glib 2.12]
g_node_destroy [Glib 2.12]	g_node_find [Glib 2.12]
g_node_find_child [Glib 2.12]	g_node_first_sibling [Glib 2.12]
g_node_get_root [Glib 2.12]	g_node_insert [Glib 2.12]
g_node_insert_after [Glib 2.12]	g_node_insert_before [Glib 2.12]
g_node_is_ancestor [Glib 2.12]	g_node_last_child [Glib 2.12]
g_node_last_sibling [Glib 2.12]	g_node_max_height [Glib 2.12]
g_node_n_children [Glib 2.12]	g_node_n_nodes [Glib 2.12]
g_node_new [Glib 2.12]	g_node_nth_child [Glib 2.12]
g_node_pop_allocator [Glib 2.12]	g_node_prepend [Glib 2.12]
g_node_push_allocator [Glib 2.12]	g_node_reverse_children [Glib 2.12]
g_node_traverse [Glib 2.12]	g_node_unlink [Glib 2.12]

An LSB conforming implementation shall provide the generic deprecated functions for Glib N-ary Trees specified in [Table 16-40](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-40. libglib-2.0 - Glib N-ary Trees Deprecated Function Interfaces

g_node_pop_allocator [Glib 2.12]	g_node_push_allocator [Glib 2.12]

16.2.32. Glib Pointer Arrays

16.2.32.1. Interfaces for Glib Pointer Arrays

An LSB conforming implementation shall provide the generic functions for Glib Pointer Arrays specified in [Table 16-41](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-41. libglib-2.0 - Glib Pointer Arrays Function Interfaces

g_ptr_array_add [Glib 2.12]	g_ptr_array_foreach [Glib 2.12]
g_ptr_array_free [Glib 2.12]	g_ptr_array_new [Glib 2.12]
g_ptr_array_remove [Glib 2.12]	g_ptr_array_remove_fast [Glib 2.12]
g_ptr_array_remove_index [Glib 2.12]	g_ptr_array_remove_index_fast [Glib 2.12]
g_ptr_array_remove_range [Glib 2.12]	g_ptr_array_set_size [Glib 2.12]
g_ptr_array_sized_new [Glib 2.12]	g_ptr_array_sort [Glib 2.12]
g_ptr_array_sort_with_data [Glib 2.12]	

16.2.33. Glib Quarks

16.2.33.1. Interfaces for Glib Quarks

An LSB conforming implementation shall provide the generic functions for Glib Quarks specified in [Table 16-42](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-42. libglib-2.0 - Glib Quarks Function Interfaces

g_intern_static_string [Glib 2.12]	g_intern_string [Glib 2.12]
g_quark_from_static_string [Glib 2.12]	g_quark_from_string [Glib 2.12]
g_quark_to_string [Glib 2.12]	g_quark_try_string [Glib 2.12]

16.2.34. Glib Random Numbers

16.2.34.1. Interfaces for Glib Random Numbers

An LSB conforming implementation shall provide the generic functions for Glib Random Numbers specified in [Table 16-43](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-43. libglib-2.0 - Glib Random Numbers Function Interfaces

<code>g_rand_copy</code> [Glib 2.12]	<code>g_rand_double</code> [Glib 2.12]
<code>g_rand_double_range</code> [Glib 2.12]	<code>g_rand_free</code> [Glib 2.12]
<code>g_rand_int</code> [Glib 2.12]	<code>g_rand_int_range</code> [Glib 2.12]
<code>g_rand_new</code> [Glib 2.12]	<code>g_rand_new_with_seed</code> [Glib 2.12]
<code>g_rand_new_with_seed_array</code> [Glib 2.12]	<code>g_rand_set_seed</code> [Glib 2.12]
<code>g_rand_set_seed_array</code> [Glib 2.12]	<code>g_random_double</code> [Glib 2.12]
<code>g_random_double_range</code> [Glib 2.12]	<code>g_random_int</code> [Glib 2.12]
<code>g_random_int_range</code> [Glib 2.12]	<code>g_random_set_seed</code> [Glib 2.12]

16.2.35. Glib Relations and Tuples

16.2.35.1. Interfaces for Glib Relations and Tuples

An LSB conforming implementation shall provide the generic functions for Glib Relations and Tuples specified in [Table 16-44](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-44. libglib-2.0 - Glib Relations and Tuples Function Interfaces

<code>g_relation_count</code> [Glib 2.12]	<code>g_relation_delete</code> [Glib 2.12]
<code>g_relation_destroy</code> [Glib 2.12]	<code>g_relation_exists</code> [Glib 2.12]
<code>g_relation_index</code> [Glib 2.12]	<code>g_relation_insert</code> [Glib 2.12]
<code>g_relation_new</code> [Glib 2.12]	<code>g_relation_print</code> [Glib 2.12]
<code>g_relation_select</code> [Glib 2.12]	<code>g_tuples_destroy</code> [Glib 2.12]
<code>g_tuples_index</code> [Glib 2.12]	

An LSB conforming implementation shall provide the generic deprecated functions for Glib Relations and Tuples specified in [Table 16-45](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-45. libglib-2.0 - Glib Relations and Tuples Deprecated Function Interfaces

<code>g_relation_count</code> [Glib 2.12]	<code>g_relation_delete</code> [Glib 2.12]
<code>g_relation_destroy</code> [Glib 2.12]	<code>g_relation_exists</code> [Glib 2.12]
<code>g_relation_index</code> [Glib 2.12]	<code>g_relation_insert</code> [Glib 2.12]
<code>g_relation_new</code> [Glib 2.12]	<code>g_relation_print</code> [Glib 2.12]

<code>g_relation_select</code> [Glib 2.12]	<code>g_tuples_destroy</code> [Glib 2.12]
<code>g_tuples_index</code> [Glib 2.12]	

16.2.36. Glib Shell-related Utilities

16.2.36.1. Interfaces for Glib Shell-related Utilities

An LSB conforming implementation shall provide the generic functions for Glib Shell-related Utilities specified in [Table 16-46](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-46. libglib-2.0 - Glib Shell-related Utilities Function Interfaces

<code>g_shell_error_quark</code> [Glib 2.12]	<code>g_shell_parse_argv</code> [Glib 2.12]
<code>g_shell_quote</code> [Glib 2.12]	<code>g_shell_unquote</code> [Glib 2.12]

16.2.37. Glib Simple XML Subset Parser

16.2.37.1. Interfaces for Glib Simple XML Subset Parser

An LSB conforming implementation shall provide the generic functions for Glib Simple XML Subset Parser specified in [Table 16-47](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-47. libglib-2.0 - Glib Simple XML Subset Parser Function Interfaces

<code>g_markup_error_quark</code> [Glib 2.12]	<code>g_markup_escape_text</code> [Glib 2.12]
<code>g_markup_parse_context_end_parse</code> [Glib 2.12]	<code>g_markup_parse_context_free</code> [Glib 2.12]
<code>g_markup_parse_context_get_element</code> [Glib 2.12]	<code>g_markup_parse_context_get_position</code> [Glib 2.12]
<code>g_markup_parse_context_new</code> [Glib 2.12]	<code>g_markup_parse_context_parse</code> [Glib 2.12]
<code>g_markup_printf_escaped</code> [Glib 2.12]	<code>g_markup_vprintf_escaped</code> [Glib 2.12]

16.2.38. Glib Singly-Linked Lists

16.2.38.1. Interfaces for Glib Singly-Linked Lists

An LSB conforming implementation shall provide the generic functions for Glib Singly-Linked Lists specified in [Table 16-48](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-48. libglib-2.0 - Glib Singly-Linked Lists Function Interfaces

g_slist_alloc [Glib 2.12]	g_slist_append [Glib 2.12]
g_slist_concat [Glib 2.12]	g_slist_copy [Glib 2.12]
g_slist_delete_link [Glib 2.12]	g_slist_find [Glib 2.12]
g_slist_find_custom [Glib 2.12]	g_slist_foreach [Glib 2.12]
g_slist_free [Glib 2.12]	g_slist_free_1 [Glib 2.12]
g_slist_index [Glib 2.12]	g_slist_insert [Glib 2.12]
g_slist_insert_before [Glib 2.12]	g_slist_insert_sorted [Glib 2.12]
g_slist_insert_sorted_with_data [Glib 2.12]	g_slist_last [Glib 2.12]
g_slist_length [Glib 2.12]	g_slist_nth [Glib 2.12]
g_slist_nth_data [Glib 2.12]	g_slist_pop_allocator [Glib 2.12]
g_slist_position [Glib 2.12]	g_slist_prepend [Glib 2.12]
g_slist_push_allocator [Glib 2.12]	g_slist_remove [Glib 2.12]
g_slist_remove_all [Glib 2.12]	g_slist_remove_link [Glib 2.12]
g_slist_reverse [Glib 2.12]	g_slist_sort [Glib 2.12]
g_slist_sort_with_data [Glib 2.12]	

An LSB conforming implementation shall provide the generic deprecated functions for Glib Singly-Linked Lists specified in [Table 16-49](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 16-49. libglib-2.0 - Glib Singly-Linked Lists Deprecated Function Interfaces

g_slist_pop_allocator [Glib 2.12]	g_slist_push_allocator [Glib 2.12]

16.2.39. Glib Spawning Processes

16.2.39.1. Interfaces for Glib Spawning Processes

An LSB conforming implementation shall provide the generic functions for Glib Spawning Processes specified in [Table 16-50](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-50. libglib-2.0 - Glib Spawning Processes Function Interfaces

g_spawn_async [Glib 2.12]	g_spawn_async_with_pipes [Glib 2.12]
g_spawn_close_pid [Glib 2.12]	g_spawn_command_line_async [Glib 2.12]

g_spawn_command_line_sync [Glib 2.12]	g_spawn_error_quark [Glib 2.12]
g_spawn_sync [Glib 2.12]	

16.2.40. Glib String Chunks

16.2.40.1. Interfaces for Glib String Chunks

An LSB conforming implementation shall provide the generic functions for Glib String Chunks specified in [Table 16-51](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-51. libglib-2.0 - Glib String Chunks Function Interfaces

g_string_chunk_free [Glib 2.12]	g_string_chunk_insert [Glib 2.12]
g_string_chunk_insert_const [Glib 2.12]	g_string_chunk_insert_len [Glib 2.12]
g_string_chunk_new [Glib 2.12]	

16.2.41. Glib String Utility Functions

16.2.41.1. Interfaces for Glib String Utility Functions

An LSB conforming implementation shall provide the generic functions for Glib String Utility Functions specified in [Table 16-52](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-52. libglib-2.0 - Glib String Utility Functions Function Interfaces

g_ascii_digit_value [Glib 2.12]	g_ascii_dtostr [Glib 2.12]
g_ascii_formatd [Glib 2.12]	g_ascii_strcasecmp [Glib 2.12]
g_ascii_strdown [Glib 2.12]	g_ascii_strncasecmp [Glib 2.12]
g_ascii_strtod [Glib 2.12]	g_ascii_strtoll [Glib 2.12]
g_ascii_strtoul [Glib 2.12]	g_ascii_strup [Glib 2.12]
g_ascii_tolower [Glib 2.12]	g_ascii_toupper [Glib 2.12]
g_ascii_xdigit_value [Glib 2.12]	g_fprintf [Glib 2.12]

16.2.42. Glib Strings

16.2.42.1. Interfaces for Glib Strings

An LSB conforming implementation shall provide the generic functions for Glib Strings specified in [Table 16-53](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-53. libglib-2.0 - Glib Strings Function Interfaces

g_string_append [Glib 2.12]	g_string_append_c [Glib 2.12]
g_string_append_len [Glib 2.12]	g_string_append_printf [Glib 2.12]
g_string_append_unichar [Glib 2.12]	g_string_assign [Glib 2.12]
g_string_equal [Glib 2.12]	g_string_erase [Glib 2.12]
g_string_free [Glib 2.12]	g_string_hash [Glib 2.12]
g_string_insert [Glib 2.12]	g_string_insert_c [Glib 2.12]
g_string_insert_len [Glib 2.12]	g_string_insert_unichar [Glib 2.12]
g_string_new [Glib 2.12]	g_string_new_len [Glib 2.12]
g_string_prepend [Glib 2.12]	g_string_prepend_c [Glib 2.12]

g_string_prepend_len [Glib 2.12]	g_string_prepend_unichar [Glib 2.12]
g_string_printf [Glib 2.12]	g_string_set_size [Glib 2.12]
g_string_sized_new [Glib 2.12]	g_string_truncate [Glib 2.12]

16.2.43. Glib - The Main Event Loop

16.2.43.1. Interfaces for Glib - The Main Event Loop

An LSB conforming implementation shall provide the generic functions for Glib - The Main Event Loop specified in [Table 16-54](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-54. libglib-2.0 - Glib - The Main Event Loop Function Interfaces

g_child_watch_add [Glib 2.12]	g_child_watch_add_full [Glib 2.12]
g_child_watch_source_new [Glib 2.12]	g_idle_add [Glib 2.12]
g_idle_add_full [Glib 2.12]	g_idle_remove_by_data [Glib 2.12]
g_idle_source_new [Glib 2.12]	g_main_context_acquire [Glib 2.12]
g_main_context_add_poll [Glib 2.12]	g_main_context_check [Glib 2.12]
g_main_context_default [Glib 2.12]	g_main_context_dispatch [Glib 2.12]
g_main_context_find_source_by_funcs_user_data [Glib 2.12]	g_main_context_find_source_by_id [Glib 2.12]
g_main_context_find_source_by_user_data [Glib 2.12]	g_main_context_get_poll_func [Glib 2.12]
g_main_context_is_owner [Glib 2.12]	g_main_context_iteration [Glib 2.12]
g_main_context_new [Glib 2.12]	g_main_context_pending [Glib 2.12]
g_main_context_prepare [Glib 2.12]	g_main_context_query [Glib 2.12]
g_main_context_ref [Glib 2.12]	g_main_context_release [Glib 2.12]
g_main_context_remove_poll [Glib 2.12]	g_main_context_set_poll_func [Glib 2.12]
g_main_context_unref [Glib 2.12]	g_main_context_wait [Glib 2.12]
g_main_context_wakeup [Glib 2.12]	g_main_current_source [Glib 2.12]
g_main_depth [Glib 2.12]	g_main_loop_get_context [Glib 2.12]
g_main_loop_is_running [Glib 2.12]	g_main_loop_new [Glib 2.12]
g_main_loop_quit [Glib 2.12]	g_main_loop_ref [Glib 2.12]
g_main_loop_run [Glib 2.12]	g_main_loop_unref [Glib 2.12]
g_source_add_poll [Glib 2.12]	g_source_attach [Glib 2.12]
g_source_destroy [Glib 2.12]	g_source_get_can_recurse [Glib 2.12]

g_source_get_context [Glib 2.12]	g_source_get_current_time [Glib 2.12]
g_source_get_id [Glib 2.12]	g_source_get_priority [Glib 2.12]
g_source_is_destroyed [Glib 2.12]	g_source_new [Glib 2.12]
g_source_ref [Glib 2.12]	g_source_remove [Glib 2.12]
g_source_remove_by_funcs_user_data [Glib 2.12]	g_source_remove_by_user_data [Glib 2.12]
g_source_remove_poll [Glib 2.12]	g_source_set_callback [Glib 2.12]
g_source_set_callback_indirect [Glib 2.12]	g_source_set_can_recurse [Glib 2.12]

g_source_unref [Glib 2.12]	g_timeout_add [Glib 2.12]
g_timeout_add_full [Glib 2.12]	g_timeout_source_new [Glib 2.12]

16.2.44. Glib Thread Pools

16.2.44.1. Interfaces for Glib Thread Pools

An LSB conforming implementation shall provide the generic functions for Glib Thread Pools specified in [Table 16-55](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-55. libglib-2.0 - Glib Thread Pools Function Interfaces

g_thread_pool_free [Glib 2.12]	g_thread_pool_get_max_idle_time [Glib 2.12]
g_thread_pool_get_max_threads [Glib 2.12]	g_thread_pool_get_max_unused_threads [Glib 2.12]
g_thread_pool_get_num_threads [Glib 2.12]	g_thread_pool_get_num_unused_threads [Glib 2.12]
g_thread_pool_new [Glib 2.12]	g_thread_pool_push [Glib 2.12]
g_thread_pool_set_max_idle_time [Glib 2.12]	g_thread_pool_set_max_threads [Glib 2.12]
g_thread_pool_set_max_unused_threads [Glib 2.12]	g_thread_pool_set_sort_function [Glib 2.12]
g_thread_pool_stop_unused_threads [Glib 2.12]	g_thread_pool_unprocessed [Glib 2.12]

16.2.45. Glib Threads

16.2.45.1. Interfaces for Glib Threads

An LSB conforming implementation shall provide the generic functions for Glib Threads specified in [Table 16-56](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-56. libglib-2.0 - Glib Threads Function Interfaces

g_static_mutex_free [Glib 2.12]	g_static_mutex_init [Glib 2.12]

g_static_private_free [Glib 2.12]	g_static_private_get [Glib 2.12]
g_static_private_init [Glib 2.12]	g_static_private_set [Glib 2.12]
g_static_rec_mutex_free [Glib 2.12]	g_static_rec_mutex_init [Glib 2.12]
g_static_rec_mutex_lock [Glib 2.12]	g_static_rec_mutex_lock_full [Glib 2.12]
g_static_rec_mutex_trylock [Glib 2.12]	g_static_rec_mutex_unlock [Glib 2.12]
g_static_rec_mutex_unlock_full [Glib 2.12]	g_static_rw_lock_free [Glib 2.12]
g_static_rw_lock_init [Glib 2.12]	g_static_rw_lock_reader_lock [Glib 2.12]
g_static_rw_lock_reader_trylock [Glib 2.12]	g_static_rw_lock_reader_unlock [Glib 2.12]
g_static_rw_lock_writer_lock [Glib 2.12]	g_static_rw_lock_writer_trylock [Glib 2.12]
g_static_rw_lock_writer_unlock [Glib 2.12]	g_thread_create_full [Glib 2.12]
g_thread_error_quark [Glib 2.12]	g_thread_exit [Glib 2.12]
g_thread_foreach [Glib 2.12]	g_thread_join [Glib 2.12]
g_thread_self [Glib 2.12]	g_thread_set_priority [Glib 2.12]

16.2.46. Glib Timers

16.2.46.1. Interfaces for Glib Timers

An LSB conforming implementation shall provide the generic functions for Glib Timers specified in [Table 16-57](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-57. libglib-2.0 - Glib Timers Function Interfaces

g_timer_continue [Glib 2.12]	g_timer_destroy [Glib 2.12]
g_timer_elapsed [Glib 2.12]	g_timer_new [Glib 2.12]
g_timer_reset [Glib 2.12]	g_timer_start [Glib 2.12]
g_timer_stop [Glib 2.12]	

16.2.47. Glib Trash Stacks

16.2.47.1. Interfaces for Glib Trash Stacks

An LSB conforming implementation shall provide the generic functions for Glib Trash Stacks specified in [Table 16-58](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-58. libglib-2.0 - Glib Trash Stacks Function Interfaces

g_trash_stack_height [Glib 2.12]	g_trash_stack_peek [Glib 2.12]

g_trash_stack_pop [Glib 2.12]	g_trash_stack_push [Glib 2.12]

16.2.48. Glib Unicode Manipulation

16.2.48.1. Interfaces for Glib Unicode Manipulation

An LSB conforming implementation shall provide the generic functions for Glib Unicode Manipulation specified in [Table 16-59](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-59. libglib-2.0 - Glib Unicode Manipulation Function Interfaces

g_mkdir_with_parents [Glib 2.12]	g_ucs4_to_utf16 [Glib 2.12]
g_ucs4_to_utf8 [Glib 2.12]	g_unichar_break_type [Glib 2.12]
g_unichar_digit_value [Glib 2.12]	g_unichar_get_mirror_char [Glib 2.12]
g_unichar_isalnum [Glib 2.12]	g_unichar_isalpha [Glib 2.12]
g_unichar_iscntrl [Glib 2.12]	g_unichar_isdefined [Glib 2.12]
g_unichar_isdigit [Glib 2.12]	g_unichar_isgraph [Glib 2.12]
g_unichar_islower [Glib 2.12]	g_unichar_isprint [Glib 2.12]
g_unichar_isspace [Glib 2.12]	g_unichar_isspace [Glib 2.12]
g_unichar_istitle [Glib 2.12]	g_unichar_isupper [Glib 2.12]
g_unichar_iswide [Glib 2.12]	g_unichar_iswide_cjk [Glib 2.12]
g_unichar_isxdigit [Glib 2.12]	g_unichar_to_utf8 [Glib 2.12]
g_unichar_tolower [Glib 2.12]	g_unichar_totitle [Glib 2.12]
g_unichar_toupper [Glib 2.12]	g_unichar_type [Glib 2.12]
g_unichar_validate [Glib 2.12]	g_unichar_xdigit_value [Glib 2.12]
g_unicode_canonical_decomposition [Glib 2.12]	g_unicode_canonical_ordering [Glib 2.12]
g_utf16_to_ucs4 [Glib 2.12]	g_utf16_to_utf8 [Glib 2.12]
g_utf8_casefold [Glib 2.12]	g_utf8_collate [Glib 2.12]
g_utf8_collate_key [Glib 2.12]	g_utf8_collate_key_for_filename [Glib 2.12]
g_utf8_find_next_char [Glib 2.12]	g_utf8_find_prev_char [Glib 2.12]
g_utf8_get_char [Glib 2.12]	g_utf8_get_char_validated [Glib 2.12]
g_utf8_normalize [Glib 2.12]	g_utf8_offset_to_pointer [Glib 2.12]
g_utf8_pointer_to_offset [Glib 2.12]	g_utf8_prev_char [Glib 2.12]
g_utf8_strchr [Glib 2.12]	g_utf8_strdown [Glib 2.12]
g_utf8_strlen [Glib 2.12]	g_utf8_strncpy [Glib 2.12]

g_utf8_strchr [Glib 2.12]	g_utf8_streverse [Glib 2.12]
g_utf8_strup [Glib 2.12]	g_utf8_to_ucs4 [Glib 2.12]
g_utf8_to_ucs4_fast [Glib 2.12]	g_utf8_to_utf16 [Glib 2.12]
g_utf8_validate [Glib 2.12]	

16.2.49. Glib Version Information

16.2.49.1. Interfaces for Glib Version Information

An LSB conforming implementation shall provide the generic functions for Glib Version Information specified in [Table 16-60](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-60. libglib-2.0 - Glib Version Information Function Interfaces

glib_check_version [Glib 2.12]	

An LSB conforming implementation shall provide the generic data interfaces for Glib Version Information specified in [Table 16-61](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-61. libglib-2.0 - Glib Version Information Data Interfaces

glib_binary_age [Glib 2.12]	glib_interface_age [Glib 2.12]
glib_major_version [Glib 2.12]	glib_mem_profiler_table [Glib 2.12]
glib_micro_version [Glib 2.12]	glib_minor_version [Glib 2.12]

16.2.50. Glib Bookmark File Parser

16.2.50.1. Interfaces for Glib Bookmark File Parser

An LSB conforming implementation shall provide the generic functions for Glib Bookmark File Parser specified in [Table 16-62](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-62. libglib-2.0 - Glib Bookmark File Parser Function Interfaces

g_bookmark_file_add_application [Glib 2.12]	g_bookmark_file_add_group [Glib 2.12]
g_bookmark_file_error_quark [Glib 2.12]	g_bookmark_file_free [Glib 2.12]
g_bookmark_file_get_added [Glib 2.12]	g_bookmark_file_get_app_info [Glib 2.12]
g_bookmark_file_get_applications [Glib 2.12]	g_bookmark_file_get_description [Glib 2.12]

g_bookmark_file_get_groups [Glib 2.12]	g_bookmark_file_get_icon [Glib 2.12]
g_bookmark_file_get_is_private [Glib 2.12]	g_bookmark_file_get_mime_type [Glib 2.12]
g_bookmark_file_get_modified [Glib 2.12]	g_bookmark_file_get_size [Glib 2.12]
g_bookmark_file_get_title [Glib 2.12]	g_bookmark_file_get_uris [Glib 2.12]
g_bookmark_file_get_visited [Glib 2.12]	g_bookmark_file_has_application [Glib 2.12]
g_bookmark_file_has_group [Glib 2.12]	g_bookmark_file_has_item [Glib 2.12]
g_bookmark_file_load_from_data [Glib 2.12]	g_bookmark_file_load_from_data_dirs [Glib 2.12]
g_bookmark_file_load_from_file [Glib 2.12]	g_bookmark_file_move_item [Glib 2.12]
g_bookmark_file_new [Glib 2.12]	g_bookmark_file_remove_application [Glib 2.12]
g_bookmark_file_remove_group [Glib 2.12]	g_bookmark_file_remove_item [Glib 2.12]
g_bookmark_file_set_added [Glib 2.12]	g_bookmark_file_set_app_info [Glib 2.12]
g_bookmark_file_set_description [Glib 2.12]	g_bookmark_file_set_groups [Glib 2.12]
g_bookmark_file_set_icon [Glib 2.12]	g_bookmark_file_set_is_private [Glib 2.12]
g_bookmark_file_set_mime_type [Glib 2.12]	g_bookmark_file_set_modified [Glib 2.12]
g_bookmark_file_set_title [Glib 2.12]	g_bookmark_file_set_visited [Glib 2.12]
g_bookmark_file_to_data [Glib 2.12]	g_bookmark_file_to_file [Glib 2.12]

16.2.51. Glib Memory Slices

16.2.51.1. Interfaces for Glib Memory Slices

An LSB conforming implementation shall provide the generic functions for Glib Memory Slices specified in [Table 16-63](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-63. libglib-2.0 - Glib Memory Slices Function Interfaces

g_slice_alloc [Glib 2.12]	g_slice_alloc0 [Glib 2.12]
g_slice_free1 [Glib 2.12]	g_slice_free_chain_with_offset [Glib 2.12]

16.2.52. Glib Base64 Encoding

16.2.52.1. Interfaces for Glib Base64 Encoding

An LSB conforming implementation shall provide the generic functions for Glib Base64 Encoding specified in [Table 16-64](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-64. libglib-2.0 - Glib Base64 Encoding Function Interfaces

<code>g_base64_decode</code> [Glib 2.12]	<code>g_base64_decode_step</code> [Glib 2.12]
<code>g_base64_encode</code> [Glib 2.12]	<code>g_base64_encode_close</code> [Glib 2.12]
<code>g_base64_encode_step</code> [Glib 2.12]	

16.3. Data Definitions for libglib-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libglib-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.4. Interface Definitions for libglib-2.0

Table of Contents

[g_cache_value_foreach](#) -- call specified interface for each value in GCache (DEPRECATED)

The interfaces defined on the following pages are included in libglib-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 16.2](#) shall behave as described in the referenced base document.

g_cache_value_foreach

Name

`g_cache_value_foreach` -- call specified interface for each value in GCache (DEPRECATED)

Synopsis

```
#include <glib-2.0/glib.h>

void g_cache_value_foreach(GCache * cache, GHFunc func, gpointer
user_data);
```

Description

The interface `g_cache_value_foreach()` shall behave as described in [Glib 2.12.13 Reference Manual](#). However, this interface is deprecated and should not be used in newly-written code, because it passes pointers to unspecified internal data structures to `func`. Use `g_cache_key_foreach()` instead.

16.5. Interfaces for libgobject-2.0

[Table 16-65](#) defines the library name and shared object name for the libgobject-2.0 library

Table 16-65. libgobject-2.0 Definition

Library:	libgobject-2.0
SONAME:	libgobject-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[GObject 2.12] [Gobject 2.12.13 Reference Manual](#)

[LSB] [This Specification](#)

16.5.1. GObject GTypeModule

16.5.1.1. Interfaces for GObject GTypeModule

An LSB conforming implementation shall provide the generic functions for GObject GTypeModule specified in [Table 16-66](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-66. libgobject-2.0 - GObject GTypeModule Function Interfaces

g_type_module_add_interface [GObject 2.12]	g_type_module_get_type [GObject 2.12]
g_type_module_register_enum [GObject 2.12]	g_type_module_register_flags [GObject 2.12]
g_type_module_register_type [GObject 2.12]	g_type_module_set_name [GObject 2.12]
g_type_module_unuse [GObject 2.12]	g_type_module_use [GObject 2.12]

16.5.2. GObject Enums and Flags

16.5.2.1. Interfaces for GObject Enums and Flags

An LSB conforming implementation shall provide the generic functions for GObject Enums and Flags specified in [Table 16-67](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-67. libgobject-2.0 - GObject Enums and Flags Function Interfaces

g_enum_complete_type_info [GObject 2.12]	g_enum_get_value [GObject 2.12]
g_enum_get_value_by_name [GObject 2.12]	g_enum_get_value_by_nick [GObject 2.12]

16.5.12. GObject GTypePlugin

16.5.12.1. Interfaces for GObject GTypePlugin

An LSB conforming implementation shall provide the generic functions for GObject GTypePlugin specified in [Table 16-78](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-78. libgobject-2.0 - GObject GTypePlugin Function Interfaces

<code>g_type_plugin_complete_interface_info</code> [GObject 2.12]	<code>g_type_plugin_complete_type_info</code> [GObject 2.12]
<code>g_type_plugin_get_type</code> [GObject 2.12]	<code>g_type_plugin_unuse</code> [GObject 2.12]
<code>g_type_plugin_use</code> [GObject 2.12]	

16.6. Data Definitions for libgobject-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgobject-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.7. Interface Definitions for libgobject-2.0

Table of Contents

g_type_name_from_class -- get unique type name of the class

g_type_name_from_instance -- get name of type from the instance

g_value_set_instance -- set value from an instantiatable type

The interfaces defined on the following pages are included in libgobject-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 16.5](#) shall behave as described in the referenced base document.

g_type_name_from_class

Name

`g_type_name_from_class` -- get unique type name of the class

Synopsis

```
#include <glib-object.h>
gchar *g_type_name_from_class (GTypeClass *g_class);
```

Description

The `g_type_name_from_class()` returns the unique name that is assigned to a type ID of *g_class* class structure.

Return Value

The `g_type_name_from_class()` function returns a pointer referring to the static string with the unique name.

Errors

No errors are defined.

g_type_name_from_instance

Name

`g_type_name_from_instance` -- get name of type from the instance

Synopsis

```
#include <glib-object.h>
gchar *g_type_name_from_instance(GTypeInstance *instance);
```

Description

The `g_type_name_from_instance()` returns the name of type from the instance *instance* in a Camel case. Instance should be valid instance pointer.

Return Value

The `g_type_name_from_instance()` function returns a pointer referring to the string with the type name.

Errors

No errors are defined.

g_value_set_instance

Name

g_value_set_instance -- set value from an instantiatable type

Synopsis

```
#include <glib-object.h>

void g_value_set_instance (GValue *value, gpointer instance);
```

Description

The `g_value_set_instance()` sets value from an instantiatable type via the `value_table`'s `collect_value()` function.

Errors

No errors are defined.

16.8. Interfaces for libgmodule-2.0

[Table 16-79](#) defines the library name and shared object name for the libgmodule-2.0 library

Table 16-79. libgmodule-2.0 Definition

Library:	libgmodule-2.0
SONAME:	libgmodule-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Glib 2.12] [Glib 2.12.13 Reference Manual](#)

16.8.1. Glib-Dynamic loading of Modules

16.8.1.1. Interfaces for Glib-Dynamic loading of Modules

An LSB conforming implementation shall provide the generic functions for Glib-Dynamic loading of Modules specified in [Table 16-80](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-80. libgmodule-2.0 - Glib-Dynamic loading of Modules Function Interfaces

<code>g_module_build_path</code> [Glib 2.12]	<code>g_module_close</code> [Glib 2.12]
<code>g_module_error</code> [Glib 2.12]	<code>g_module_make_resident</code> [Glib 2.12]
<code>g_module_name</code> [Glib 2.12]	<code>g_module_open</code> [Glib 2.12]
<code>g_module_supported</code> [Glib 2.12]	<code>g_module_symbol</code> [Glib 2.12]

16.9. Data Definitions for libgmodule-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgmodule-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.9.1. glib-2.0/gmodule.h

16.10. Interfaces for libgthread-2.0

[Table 16-81](#) defines the library name and shared object name for the libgthread-2.0 library

Table 16-81. libgthread-2.0 Definition

Library:	libgthread-2.0
SONAME:	libgthread-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Glib 2.12] [Glib 2.12.13 Reference Manual](#)

16.10.1. Glib thread abstraction

16.10.1.1. Interfaces for Glib thread abstraction

An LSB conforming implementation shall provide the generic functions for Glib thread abstraction specified in [Table 16-82](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-82. libgthread-2.0 - Glib thread abstraction Function Interfaces

g_thread_init [Glib 2.12]	g_thread_init_with_errorcheck_mutexes [Glib 2.12]

16.11. Interfaces for libatk-1.0

[Table 16-83](#) defines the library name and shared object name for the libatk-1.0 library

Table 16-83. libatk-1.0 Definition

Library:	libatk-1.0
SONAME:	libatk-1.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[ATK 1.10] [ATK 1.10.3 Reference Manual](#)

[GObject 2.12] [GObject 2.12.13 Reference Manual](#)

16.11.1. GTK Accessibility Toolkit

16.11.1.1. Interfaces for GTK Accessibility Toolkit

An LSB conforming implementation shall provide the generic functions for GTK Accessibility Toolkit specified in [Table 16-84](#), with the full mandatory functionality as described in the referenced underlying specification.

16.12. Data Definitions for libatk-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libatk-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.13. Interfaces for libpango-1.0

[Table 16-85](#) defines the library name and shared object name for the libpango-1.0 library

Table 16-85. libpango-1.0 Definition

Library:	libpango-1.0
SONAME:	libpango-1.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[GObject 2.12] [Gobject 2.12.13 Reference Manual](#)[Pango 1.10] [Pango 1.10.4 Reference Manual](#)

16.13.1. GTK Internationalized Text Layout and Rendering library

16.13.1.1. Interfaces for GTK Internationalized Text Layout and Rendering library

An LSB conforming implementation shall provide the generic functions for GTK Internationalized Text Layout and Rendering library specified in [Table 16-86](#), with the full mandatory functionality as described in the referenced underlying specification.

16.14. Data Definitions for libpango-1.0

This section defines global identifiers and their values that are associated with interfaces contained in libpango-1.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.14.1. pango-1.0/pango/pango-utils.h

```
extern gboolean pango_is_zero_width(gunichar ch);
extern const char *pango_language_get_sample_string(PangoLanguage *
                                                    language);

16.21. Interfaces for libgdk_pixbuf-2.0

[Table 16-93](#) defines the library name and shared object name for the libgdk_pixbuf-2.0 library

Table 16-93. libgdk_pixbuf-2.0 Definition

Library:	libgdk_pixbuf-2.0
SONAME:	libgdk_pixbuf-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gdk-pixbuf 2.8] [Gdk-pixbuf 2.8.20 Reference Manual](#)

[GObject 2.12] [GObject 2.12.13 Reference Manual](#)

16.21.1. GDK pixbuf rendering on drawables library

16.21.1.1. Interfaces for GDK pixbuf rendering on drawables library

An LSB conforming implementation shall provide the generic functions for GDK pixbuf rendering on drawables library specified in [Table 16-94](#), with the full mandatory functionality as described in the referenced underlying specification.

gdk_pixbuf_minor_version [Gdk-pixbuf 2.8]	gdk_pixbuf_version [Gdk-pixbuf 2.8]

16.22. Data Definitions for libgdk_pixbuf-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk_pixbuf-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.23. Interfaces for libgdk_pixbuf_xlib-2.0

[Table 16-96](#) defines the library name and shared object name for the libgdk_pixbuf_xlib-2.0 library

Table 16-96. libgdk_pixbuf_xlib-2.0 Definition

Library:	libgdk_pixbuf_xlib-2.0
SONAME:	libgdk_pixbuf_xlib-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gdk-pixbuf 2.8] [Gdk-pixbuf 2.8.20 Reference Manual](#)

16.23.1. GDK pixbuf rendering to an X drawable library

16.23.1.1. Interfaces for GDK pixbuf rendering to an X drawable library

An LSB conforming implementation shall provide the generic functions for GDK pixbuf rendering to an X drawable library specified in [Table 16-97](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-97. libgdk_pixbuf_xlib-2.0 - GDK pixbuf rendering to an X drawable library Function Interfaces

16.24. Data Definitions for libgdk_pixbuf_xlib-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk_pixbuf_xlib-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.25. Interfaces for libgdk-x11-2.0

[Table 16-98](#) defines the library name and shared object name for the libgdk-x11-2.0 library

Table 16-98. libgdk-x11-2.0 Definition

Library:	libgdk-x11-2.0
SONAME:	libgdk-x11-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[Gdk 2.10] [Gdk 2.10.14 Reference Manual](#)

[GObject 2.12] [Gobject 2.12.13 Reference Manual](#)

16.25.1. GTK Drawing toolkit

16.25.1.1. Interfaces for GTK Drawing toolkit

An LSB conforming implementation shall provide the generic functions for GTK Drawing toolkit specified in [Table 16-99](#), with the full mandatory functionality as described in the referenced underlying specification.

An LSB conforming implementation shall provide the generic data interfaces for GTK Drawing toolkit specified in [Table 16-100](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-100. libgdk-x11-2.0 - GTK Drawing toolkit Data Interfaces

16.26. Data Definitions for libgdk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgdk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.26.1. gtk-2.0/gdk/gdk.h

16.27. Interfaces for libgtk-x11-2.0

[Table 16-101](#) defines the library name and shared object name for the libgtk-x11-2.0 library

Table 16-101. libgtk-x11-2.0 Definition

Library:	libgtk-x11-2.0
SONAME:	libgtk-x11-2.0.so.0

The behavior of the interfaces in this library is specified by the following specifications:

[GObject 2.12] [Gobject 2.12.13 Reference Manual](#)

[Gtk 2.10] [Gtk+ 2.10.14 Reference Manual](#)

[LSB] [This Specification](#)

16.27.1. GTK main Widgets library

16.27.1.1. Interfaces for GTK main Widgets library

An LSB conforming implementation shall provide the generic functions for GTK main Widgets library specified in [Table 16-102](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 16-102. libgtk-x11-2.0 - GTK main Widgets library Function Interfaces
