An LSB conforming implementation shall provide the generic deprecated functions for GTK main Widgets library specified in [Table 16-103](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

16.28. Data Definitions for libgtk-x11-2.0

This section defines global identifiers and their values that are associated with interfaces contained in libgtk-x11-2.0. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the ISO C (1999) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

16.28.1. gtk-2.0/gtk/gtk.h

16.29. Interface Definitions for libgtk-x11-2.0

Table of Contents

[gtk_button_get_image](#) -- get button image widget

[gtk_button_set_image](#) -- set button image widget

[gtk_toolbar_get_tooltips](#) -- retrieve whether tooltips are enabled

[gtk_toolbar_set_tooltips](#) -- set whether a toolbar's tooltips are active

The interfaces defined on the following pages are included in libgtk-x11-2.0 and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 16.27](#) shall behave as described in the referenced base document.

gtk_button_get_image

Name

gtk_button_get_image -- get button image widget

Synopsis

```
#include <gtk/gtk.h>
GtkWidget *gtk_button_get_image(GtkButton *button);
```

Description

The `gtk_button_get_image()` gets the widget that is currently set as the image of *button*. This may have been explicitly set by `gtk_button_set_image()` or constructed by `gtk_button_new_from_stock()`.

Return Value

The `gtk_button_get_image()` function returns a `GtkWidget` pointer referring to the image. If there is no associated image, `NULL` is returned.

Errors

No errors are defined.

gtk_button_set_image

Name

gtk_button_set_image -- set button image widget

Synopsis

```
#include <gtk/gtk.h>
void gtk_button_set_image(GtkButton *button, GtkWidget *widget);
```

Description

The `gtk_button_set_image()` function sets the image of *button* to the widget given by *widget*. Whether the image is displayed or not depends on the setting of the `gtk-button-images` property. It is not necessary to call `gtk_widget_show()` on the image.

Errors

No errors are defined.

gtk_toolbar_get_tooltips

Name

gtk_toolbar_get_tooltips -- retrieve whether tooltips are enabled

Synopsis

```
#include <gtk/gtk.h>
gboolean gtk_toolbar_get_tooltips(GtkToolbar * toolbar);
```

Description

gtk_toolbar_get_tooltips() shall retrieve whether the tooltips of *toolbar* are enabled.

This interface has been deprecated since version 2.14 of the GTK+ specification.

Return Value

gtk_toolbar_get_tooltips() shall return TRUE if the tooltips of *toolbar* are enabled, and FALSE if they are not.

See Also

gtk_toolbar_set_tooltips()

gtk_toolbar_set_tooltips

Name

gtk_toolbar_set_tooltips -- set whether a toolbar's tooltips are active

Synopsis

```
#include <gtk/gtk.h>

void gtk_toolbar_set_tooltips(GtkToolbar * toolbar, gboolean enable);
```

Description

gtk_toolbar_set_tooltips() shall set whether the tooltips of *toolbar* are active. If the value of the parameter *enable* is TRUE, then the tooltips shall be made active; otherwise, they shall be made inactive.

This call may have no effect. The interface has been deprecated since version 2.14 of the GTK+ specification.

Chapter 17. Libraries

17.1. Introduction

An conforming implementation shall support the following Qt libraries which provide interfaces for creating rich user applications, either graphical or console.

QtCore	A general-purpose application development library, not specific to graphical user interfaces. QtCore provides a main loop, threading classes, tool classes, template container classes, IO classes, and so on.
QtGui	The GUI part of Qt, provides a paint engine, text rendering engine, widgets, printing, PDF generation, accessibility classes, and so on.
QtXml	The XML support for Qt, provides fast XML parsing and DOM classes to traverse the XML tree.
QtOpenGL	The OpenGL integration for Qt, provides OpenGL rendering and embedding.
QtSql	The database part of Qt, provides access to databases and models that connect databases into the model/view framework of QtGui.
QtSvg	Renders Svg files into any context, for displaying on the screen, printing or embedding in PDF.
QtNetwork	Provides network server and client classes, TCP/IP, UDP, Http, Ftp, Url parsing support, and so on.

There are three main parts to the definition of each of these libraries.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although presented in the form of header files for convenience, should not be taken a representing complete header files, as they are a supplement to the source specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

Note: While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

17.2. Interfaces for libQtCore

Table 17-1 defines the library name and shared object name for the libQtCore library

Table 17-1. libQtCore Definition

Library:	libQtCore
SONAME:	libQtCore.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] [Itanium™ C++ ABI](#)

[LSB] [This Specification](#)

[QtCore] [QtCore 4.2.0](#)

[QtXml] [QtXml 4.2.0](#)

17.2.1. Qt4 Core Functions

17.2.1.1. Class data for QDynamicPropertyChangeEvent

The virtual table for the QDynamicPropertyChangeEvent class is described by [Table 17-2](#)

Table 17-2. Primary vtable for QDynamicPropertyChangeEvent

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QDynamicPropertyChangeEvent
vfunc[0]:	QDynamicPropertyChangeEvent::~~QDynamicPropertyChangeEvent()
vfunc[1]:	QDynamicPropertyChangeEvent::~~QDynamicPropertyChangeEvent()

17.2.1.2. Class data for QTimeLine

The virtual table for the QTimeLine class is described by [Table 17-3](#)

Table 17-3. Primary vtable for QTimeLine

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QTimeLine
vfunc[0]:	QTimeLine::metaObject() const
vfunc[1]:	QTimeLine::qt_metacast(char const*)
vfunc[2]:	QTimeLine::qt_metacall(QMetaObject::Call, int, void**)
vfunc[3]:	QTimeLine::~~QTimeLine()
vfunc[4]:	QTimeLine::~~QTimeLine()
vfunc[5]:	QObject::event(QEvent*)

vfunc[6]:	QObject::eventFilter(QObject*, QEvent*)
vfunc[7]:	QTimeLine::timerEvent(QTimerEvent*)
vfunc[8]:	QObject::childEvent(QChildEvent*)
vfunc[9]:	QObject::customEvent(QEvent*)
vfunc[10]:	QObject::connectNotify(char const*)
vfunc[11]:	QObject::disconnectNotify(char const*)
vfunc[12]:	QTimeLine::valueForTime(int) const

17.2.1.3. Interfaces for Qt4 Core Functions

An LSB conforming implementation shall provide the generic functions for Qt4 Core Functions specified in [Table 17-4](#), with the full mandatory functionality as described in the referenced underlying specification.

17.3. Data Definitions for libQtCore

This section defines global identifiers and their values that are associated with interfaces contained in libQtCore. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

The interfaces defined on the following pages are included in libQtCore and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 17.2](#) shall behave as described in the referenced base document.

_Z5qFreePv

Name

qFree -- free the memory space

Synopsis

```
#include <QtCore/qglobal.h>
void qFree (void *ptr);
```

Description

The `qFree()` function has the same behavior as the `free()` function described in POSIX 1003.1-2001 (ISO/IEC 9945-2003).

_Z7qgetenvPKc

Name

qgetenv -- get value of an environment variable

Synopsis

```
#include <QtCore/qglobal.h>
QByteArray qgetenv (const char *varName);
```

Description

The `qgetenv()` function has the same behavior as the `getenv()` function described in [POSIX 1003.1-2001 \(ISO/IEC 9945-2003\)](#) except that the result is represented as `QByteArray`.

_ZN11QMetaObject7connectEPK7QObjectiS2_iiPi

Name

QMetaObject::connect -- connect signals

Synopsis

```
#include <QtCore/qmetaobject.h>
bool QMetaObject::connect(const QObject * sender, int signal_index, const
QObject * receiver, int method_index, int type, int * types);
```

Description

The `QMetaObject::connect()` function shall connect the signal with *signal_index* index from the sender to the receiver's slot.

The *type* specifies connection type and should have one of the `Qt::ConnectionType` values.

types is a 0-terminated vector of meta types for queued connections.

If *signal_index* is -1, then the function shall effectively connect all signals from the sender to the receiver's slot.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN16QCoreApplication10unixSignalEi

Name

QCoreApplication::unixSignal -- emit a signal whenever a Unix signal is received

Synopsis

```
#include <QtCore/qcoreapplication.h>

void QCoreApplication::unixSignal (int number);
```

Description

The `QCoreApplication::unixSignal()` is a Qt signal function.

The signal is emitted whenever Unix signal is received by the application. The Unix signal received is specified by its number *number*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN4QDir21nameFiltersFromStringERK7QString

Name

QDir::nameFiltersFromString -- retrieve a list of name filters from the given

Synopsis

```
#include <QtCore/qdir.h>
static QStringList QDir::nameFiltersFromString (const QString
&nameFilter);
```

Description

The `QDir::nameFiltersFromString()` function shall return a list of name filters from the given string *nameFilter*.

If there is more than one filter in the string, then each pair of filters should be separated by a space or by a semicolon.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QString4freeEPNS_4DataE

Name

QString::free -- free the memory space

Synopsis

```
#include <QtCore/qstring.h>
static void QString::free (Data *d);
```

Description

The `QString::free()` function shall free the memory area allocated for the *d* object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QHashData12allocateNodeEv

Name

QHashData::allocateNode -- allocate memory for the node

Synopsis

```
#include <QtCore/qhash.h>
void * QHashData::allocateNode(void);
```

Description

The `QHashData::allocateNode()` function shall allocate the memory for the object's node.

The call to this function is equivalent to the call for the `qMalloc()` function with the argument equal to the `nodeSize` property of the object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QHashData8freeNodeEPv

Name

QHashData::freeNode -- free the memory occupied by the node

Synopsis

```
#include <QtCore/qhash.h>
void QHashData::freeNode(void * node);
```

Description

The `QHashData::freeNode()` function shall free the memory occupied by the *node*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QMetaType12registerTypeEPKcPFvPvEPFS2_PKv

Name

QMetaType::registerType -- register a user type for marshalling

Synopsis

```
#include <QtCore/qmetatype.h>

static int QMetaType::registerType(const char * typeName, Destructor
destructor, Constructor constructor);
```

Description

The `QMetaType::registerType()` function shall register a user type for marshalling, with a *typeName* name, *destructor* destructor, and a *constructor* constructor.

The function shall return the type's handle on success, or -1 if the type could not be registered.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QMetaObject4castEP7QObject

Name

QMetaObject::cast -- check if an object inherits from the meta-object

Synopsis

```
#include <QtCore/qobjectdefs.h>
QObject * QMetaObject::cast (QObject *obj);
```

Description

The `QMetaObject::cast()` function shall check if the object pointed by *obj* inherits from the current meta-object. If yes, the function shall return *obj*. Otherwise it shall return 0.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QMetaProperty12hasStdCppSetEv

Name

QMetaProperty::hasStdCppSet -- check if a property follows "name" / "setName" pattern

Synopsis

```
#include <QtCore/qmetaobject.h>
bool QMetaProperty::hasStdCppSet(void);
```

Description

The `QMetaProperty::hasStdCppSet()` function shall return true if the property has a C++ setter function that follows Qt's standard "name" / "setName" pattern. This function can be queried in order to avoid expensive `QObject::setProperty()` calls. All properties in Qt should follow the pattern mentioned.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK21QPersistentModelIndex10internalIdEv

Name

QPersistentModelIndex::internalId -- get the id used to associate the index with the internal data structure

Synopsis

```
#include <QtCore/qabstractitemmodel.h>
qint64 QPersistentModelIndex::internalId (void);
```

Description

The `QPersistentModelIndex::internalId()` function shall return the internal integer identifier used by the model to associate the index with the internal data structure.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK21QPersistentModelIndex15internalPointerEv

Name

QPersistentModelIndex::internalPointer -- get the pointer used to associate the index with the internal data structure

Synopsis

```
#include <QtCore/qabstractitemmodel.h>
void * QPersistentModelIndex::internalPointer (void);
```

Description

The `QPersistentModelIndex::internalPointer()` function shall return the internal pointer used by the model to associate the index with the internal data structure.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

Name

QUrl::operator< -- compare URLs

Synopsis

```
#include <QtCore/qurl.h>
bool QUrl::operator< (const QUrl &url);
```

Description

This operator shall return true if the URL represented by its caller is "less than" the given URL.

This operator provides a means of ordering URLs. If two URLs are not equal than one of them should be "less than" the other. No exact comparison algorithm is specified.

This operator is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK5QFile10fileEngineEv

Name

QFile::fileEngine -- get the QIOEngine for this QFile object

Synopsis

```
#include <QtCore/qfile.h>
virtual QAbstractFileEngine * QFile::fileEngine (void);
```

Description

The `QFile::fileEngine()` function shall return the the QIOEngine for this QFile object.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

QUuid::operator >

Name

QUuid::operator > -- UUID greater-than comparison operator

Synopsis

```
public class QUuid {  
    bool operator >(const QUuid & other); }
```

Description

QUuid::operator > has the same specification as in [QtCore 4.2.0](#), except for differences noted below.

Return Value

Returns true if this QUuid has the same variant field as the other QUuid and is lexicographically after the other QUuid. If the other QUuid has a different variant field, the return value is unspecified.

QUuid::operator <

Name

QUuid::operator < -- UUID less-than comparison operator

Synopsis

```
public class QUuid {  
    bool operator <(const QUuid & other); }
```

Description

QUuid::operator < has the same specification as in [QtCore 4.2.0](#), except for differences noted below.

Return Value

Returns true if this QUuid has the same variant field as the other QUuid and is lexicographically before the other QUuid. If the other QUuid has a different variant field, the return value is unspecified.

_ZNK7QObject9queryListEPKcS1_bb

Name

QObject::queryList -- search the children and optionally grandchildren of the object

Synopsis

```
#include <QtCore/qobject.h>

QObjectList QObject::queryList(const char * inheritsClass = 0 , const
char * objName = 0, bool regexpMatch = true, bool recursiveSearch =
true);
```

Description

The `QObject::queryList()` function shall search the children and optionally grandchildren of this object.

The function shall return a list of those objects that are named or that match *objName* and inherit *inheritsClass*. If *inheritsClass* is 0 (the default), all classes match. If *objName* is 0 (the default), all object names match.

If *regexpMatch* is true (the default), *objName* is a regular expression that the objects's names must match. The syntax is that of a `QRegExp`. If *regexpMatch* is false, *objName* is a string and object names must match it exactly.

Note that *inheritsClass* uses single inheritance from `QObject`, the way `inherits()` does. According to `inherits()`, `QWidget` inherits `QObject` but not `QPaintDevice`. This does not quite match reality, but is the best that can be done on the wide variety of compilers Qt supports.

Finally, if *recursiveSearch* is true (the default), the `QObject::queryList()` shall search n-th-generation as well as first-generation children.

Warning: Delete the obtained list as soon you have finished using it. The list contains pointers that may become invalid at almost any time without notice (as soon as the user closes a window you may have dangling pointers, for example).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

17.5. Interfaces for libQtGui

Table 17-98 defines the library name and shared object name for the libQtGui library

Table 17-98. libQtGui Definition

Library:	libQtGui
SONAME:	libQtGui.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI

[LSB] This Specification

[QtGui] QtGui 4.2.0

[QtXml] QtXml 4.2.0

17.5.1. Qt4 GUI Functions

17.5.1.1. Interfaces for Qt4 GUI Functions

An LSB conforming implementation shall provide the generic functions for Qt4 GUI Functions specified in Table 17-99, with the full mandatory functionality as described in the referenced underlying specification.

Table 17-99. libQtGui - Qt4 GUI Functions Function Interfaces

<u>_Z10qDrawArrowP8QPainterN2Qt9ArrowTypeENS1_8GUIStyleEbiiiiRK8QPaletteb</u> [QtGui]	<u>_Z13qDrawWinPanelP8QPa</u>

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 Models and Views specified in [Table 17-258](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 17-258. libQtGui - Qt4 Models and Views Deprecated Function Interfaces

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 Widgets specified in [Table 17-478](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

An LSB conforming implementation shall provide the generic deprecated functions for Qt4 2D Graphics specified in [Table 17-520](#), with the full mandatory functionality as described in the referenced underlying specification.

Note: These interfaces are deprecated, and applications should avoid using them. These interfaces may be withdrawn in future releases of this specification.

Table 17-520. libQtGui - Qt4 2D Graphics Deprecated Function Interfaces

_ZN22QGraphicsItemAnimation5resetEv [QtXml]	

17.6. Data Definitions for libQtGui

This section defines global identifiers and their values that are associated with interfaces contained in libQtGui. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

ZNK9QFontInfo9underlineEv -- get the underline value of the matched window system font

The interfaces defined on the following pages are included in libQtGui and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 17.5](#) shall behave as described in the referenced base document.

`_ZN11QGridLayout21setDefaultPositioningEiN2Qt11OrientationE`

Name

`QGridLayout::setDefaultPositioning` -- set the positioning mode

Synopsis

```
#include <QtGui/qgridlayout.h>
void QGridLayout::setDefaultPositioning (int n, Qt::Orientation orient);
```

Description

The `QGridLayout::setDefaultPositioning()` function shall set the positioning mode used by `QGridLayout::addItem()`.

If *orient* is `Qt::Horizontal`, the layout is expanded to *n* columns, and items will be added columns-first. Otherwise it is expanded to *n* rows and items will be added rows-first.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN11QHeaderView13updateSectionEi

Name

QHeaderView::updateSection -- update HeaderView section

Synopsis

```
#include <QtGui/qheaderview.h>
void QHeaderView::updateSection (int logicalIndex);
```

Description

The `QHeaderView::updateSection()` function shall update the section specified by the given *logicalIndex*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine13setSystemClipERK7QRegion

Name

QPaintEngine::setSystemClip -- set the system clip for the engine

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setSystemClip (const QRegion &region);
```

Description

The `QPaintEngine::setSystemClip()` function shall set the system clip for the engine. The system clip defines the basis area that the engine has to draw in. All clips that are set must be an intersection with the system clip.

The system clip can be reset to no clip by setting an empty region.

The function takes effect only if the engine is not active.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine13setSystemRectERK5QRect

Name

QPaintEngine::setSystemRect -- set the target rect for drawing within the backing store

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setSystemRect (const QRect &rect);
```

Description

The `QPaintEngine::setSystemRect()` function shall set the target rect for drawing within the backing store.

The function takes effect only if the engine is not active.

This function should only be used by the backing store, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN12QPaintEngine14setPaintDeviceEP12QPaintDevice

Name

QPaintEngine::setPaintDevice -- set the paintdevice that the engine operates on

Synopsis

```
#include <QtGui/qpaintengine.h>
void QPaintEngine::setPaintDevice (QPaintDevice *device);
```

Description

The `QPaintEngine::setPaintDevice()` function shall set the paint device that this engine operates on to *device*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

QPixmapCache::cacheLimit

Name

QPixmapCache::cacheLimit -- UUID greater-than comparison operator

Synopsis

```
public class QPixmapCache {  
    bool operator >(const QPixmapCache & other); }
```

Description

QPixmapCache::cacheLimit has the same specification as in [QtGui 4.2.0](#), except for differences noted below.

Default Value

Default value of the cache limit is unspecified.

_ZN13QGraphicsItem10addToIndexEv

Name

QGraphicsItem::addToIndex -- add the item from the scene's index

Synopsis

```
#include <QtGui/qgraphicsitem.h>
void QGraphicsItem::addToIndex (void);
```

Description

The `QGraphicsItem::addToIndex()` function shall add the calling object to the scene's index.

This function can be called in conjunction with the `removeFromIndex()` function to ensure the index bookkeeping is correct when the item's position, transformation or shape changes.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QGraphicsItem12setExtensionENS_9ExtensionE

Name

QGraphicsItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsItem::setExtension()` function doesn't do anything. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QGraphicsItem15removeFromIndexEv

Name

QGraphicsItem::removeFromIndex -- remove the item from the scene's index

Synopsis

```
#include <QtGui/qgraphicsitem.h>
void QGraphicsItem::removeFromIndex (void);
```

Description

The `QGraphicsItem::removeFromIndex()` function shall remove the calling object from the scene's index.

This function can be called in conjunction with the `addToIndex()` function to ensure the index bookkeeping is correct when the item's position, transformation or shape changes.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN13QInputContext14setFocusWidgetEP7QWidget

Name

QInputContext::setFocusWidget -- set the input focus for the current context

Synopsis

```
#include <QtGui/qinputcontext.h>
void QInputContext::setFocusWidget(QWidget * w);
```

Description

The `QInputContext::setFocusWidget()` shall set the widget that has an input focus for this input context to `w`.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

See Also

`focusWidget()`

_ZN13QTextDocument14appendUndoItemEP17QAbstractUndoItem

Name

QTextDocument::appendUndoItem -- append an item to the undo stack

Synopsis

```
#include <QtGui/qtextdocument.h>
void QTextDocument::appendUndoItem(QAbstractUndoItem * item);
```

Description

The `QTextDocument::appendUndoItem()` function shall append a custom undo *item* to the undo stack.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView13doItemsLayoutEv

Name

QAbstractItemView::doItemsLayout -- lay out the items in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::doItemsLayout(void);
```

Description

The `QAbstractItemView::doItemsLayout()` function shall lay out the items in the view.

Inheritors of the `QAbstractItemView` class are intended to overload this function. The default implementation just calls `updateGeometries()` function and update the viewport.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView16updateEditorDataEv

Name

QAbstractItemView::updateEditorData -- update the data shown in the open editor widgets in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::updateEditorData(void);
```

Description

The `QAbstractItemView::updateEditorData()` function shall update the data shown in the open editor widgets in the view.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView2updateEditorGeometriesEv

Name

QAbstractItemView::updateEditorGeometries -- update geometry of open editor widgets in the view

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::updateEditorGeometries(void);
```

Description

The `QAbstractItemView::updateEditorGeometries()` function shall update the geometry of the open editor widgets in the view.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView23verticalScrollbarActionEi

Name

QAbstractItemView::verticalScrollbarAction -- dummy hook

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::verticalScrollbarAction(int action);
```

Description

The `QAbstractItemView::verticalScrollbarAction()` function doesn't do anything. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QAbstractItemView25horizontalScrollbarActionE

Name

QAbstractItemView::horizontalScrollbarAction -- dummy hook

Synopsis

```
#include <QtGui/qabstractitemview.h>
virtual void QAbstractItemView::horizontalScrollbarAction(int action);
```

Description

The `QAbstractItemView::horizontalScrollbarAction()` function doesn't do anything. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsLineItem12setExtensionEN13QGraphi

Name

QGraphicsLineItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsLineItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsLineItem::setExtension()` function does nothing. It is provided as a hook to avoid problems with adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsPathItem12setExtensionEN13QGraphi

Name

QGraphicsPathItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPathItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsPathItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsRectItem12setExtensionEN13QGraphi

Name

QGraphicsRectItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsRectItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsRectItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN17QGraphicsTextItem12setExtensionEN13QGraphi

Name

QGraphicsTextItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsTextItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsTextItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN18QDragResponseEventC1Eb, _ZN18QDragResponseEventC2Eb

Name

QDragResponseEvent::QDragResponseEvent -- QDragResponseEvent constructor

Synopsis

```
#include <QtGui/qevent.h>  
QDragResponseEvent::QDragResponseEvent (bool accepted);
```

Description

The `QDragResponseEvent::QDragResponseEvent ()` function shall construct a drag response event containing the *accepted* value, indicating whether the drag and drop operation was accepted by the recipient.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QGraphicsPixmapItem12setExtensionEN13QGra

Name

QGraphicsPixmapItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPixmapItem::setExtension(Extension extension, const
QVariant & variant);
```

Description

The `QGraphicsPixmapItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QGraphicsSceneEvent9setWidgetEP7QWidget

Name

QGraphicsSceneEvent::setWidget -- Sets the widget related to the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneEvent::setWidget (QWidget *widget);
```

Description

The `QGraphicsSceneEvent::setWidget()` function shall set the widget related to the event to *source*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QGraphicsSceneEventC1EN6QEvent4TypeE, _ZN19QGraphicsSceneEventC2EN6QEvent4TypeE

Name

QGraphicsSceneEvent::QGraphicsSceneEvent -- QGraphicsSceneEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>  
QGraphicsSceneEvent::QGraphicsSceneEvent (QEvent::Type type);
```

Description

Constructs a new QGraphicsSceneEvent of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN19QToolBarChangeEventC1Eb, _ZN19QToolBarChangeEventC2Eb

Name

QToolBarChangeEvent::QToolBarChangeEvent -- QToolBarChangeEvent constructor

Synopsis

```
#include <QtGui/qevent.h>
QToolBarChangeEvent::QToolBarChangeEvent (bool state);
```

Description

The `QToolBarChangeEvent::QToolBarChangeEvent ()` function shall construct a `QToolBarChangeEvent` object given the current button state in *state*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN20QGraphicsEllipseItem12setExtensionEN13QGrap

Name

QGraphicsEllipseItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsEllipseItem::setExtension(Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsEllipseItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN20QGraphicsPolygonItem12setExtensionEN13QGra

Name

QGraphicsPolygonItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsPolygonItem::setExtension(Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsPolygonItem::setExtension()` does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEvent11setScenePosERK7Q

Name

QGraphicsSceneHelpEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHelpEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneHelpEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEvent12setScreenPosERK6

Name

QGraphicsSceneHelpEvent::setScreenPos -- set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHelpEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneHelpEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEventC1EN6QEvent4TypeE
_ZN23QGraphicsSceneHelpEventC2EN6QEvent4TypeE

Name

QGraphicsSceneHelpEvent::QGraphicsSceneHelpEvent -- QGraphicsSceneHelpEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneHelpEvent::QGraphicsSceneHelpEvent (QEvent::Type type);
```

Description

Constructs a new QGraphicsSceneHelpEvent of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN23QGraphicsSceneHelpEventC1EN6QEvent4TypeE, **_ZN23QGraphicsSceneHelpEventC2EN6QEvent4TypeE**

_ZN23QGraphicsSimpleTextItem12setExtensionEN13Q

Name

QGraphicsSimpleTextItem::setExtension -- set extension for the item

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual void QGraphicsSimpleTextItem::setExtension(Extension extension,
const QVariant & variant);
```

Description

The `QGraphicsSimpleTextItem::setExtension()` function does nothing. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QAbstractPageSetupDialog7printerEv

Name

QAbstractPageSetupDialog::printer -- get the printer that this page setup dialog is operating on

Synopsis

```
#include <QtGui/qabstractpagesetupdialog.h>
QPrinter * QAbstractPageSetupDialog::printer(void);
```

Description

The `QAbstractPageSetupDialog::printer()` function shall return the printer that this page setup dialog is operating on.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

ZN24QAbstractPageSetupDialogC1EP8QPrinterP7QWidget, _ZN24QAbstractPageSetupDialogC1EP8QPrinterP7QWidget

_ZN24QGraphicsSceneHoverEvent11setScenePosERK

Name

QGraphicsSceneHoverEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneHoverEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEvent12setScreenPosERK6QPoint

Name

QGraphicsSceneHoverEvent::setScreenPos -- set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneHoverEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position where the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEvent6setPosERK7QPointF

Name

`QGraphicsSceneHoverEvent::setPos` -- set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneHoverEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneHoverEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEventC1EN6QEvent4Type
_ZN24QGraphicsSceneHoverEventC2EN6QEvent4Type

Name

QGraphicsSceneHoverEvent::QGraphicsSceneHoverEvent -- QGraphicsSceneHoverEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>  
QGraphicsSceneHoverEvent::QGraphicsSceneHoverEvent (QEvent::Type type);
```

Description

Constructs a new QGraphicsSceneHoverEvent of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneHoverEventC1EN6QEvent4TypeE, _ZN24QGraphicsSceneHoverEventC2EN6QEvent4TypeE

_ZN24QGraphicsSceneMouseEvent10setButtonsE6QFI

Name

QGraphicsSceneMouseEvent::setButtons -- set the mouse buttons that were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtons (Qt::MouseButtonss buttons);
```

Description

The `QGraphicsSceneMouseEvent::setButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent10setLastPosERK7QPointF

Name

`QGraphicsSceneMouseEvent::setLastPos` -- set the last recorded mouse cursor position in item coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastPos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastPos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in item coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent11setScenePosERK

Name

QGraphicsSceneMouseEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent12setModifiersE6Q

Name

`QGraphicsSceneMouseEvent::setModifiers` -- set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setModifiers (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneMouseEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event was created) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent12setScreenPosER

Name

QGraphicsSceneMouseEvent::setScreenPos -- set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneMouseEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent15setLastScenePos

Name

`QGraphicsSceneMouseEvent::setLastScenePos` -- set the last recorded mouse cursor position in scene coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastScenePos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in scene coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent16setButtonDownP

Name

QGraphicsSceneMouseEvent::setButtonDownPos -- set the mouse position where the specified button was clicked in item coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButtonDownPos (Qt::MouseButton button,
const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownPos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in item coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent16setLastScreenPos

Name

`QGraphicsSceneMouseEvent::setLastScreenPos` -- set the last recorded mouse cursor position in screen coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setLastScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneMouseEvent::setLastScreenPos()` function shall set the last recorded mouse cursor position associated with the event to the given point *pos* in screen coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent21setButtonDownScenePos

Name

`QGraphicsSceneMouseEvent::setButtonDownScenePos` -- set the mouse position where the specified button was clicked in scene coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>

void QGraphicsSceneMouseEvent::setButtonDownScenePos (Qt::MouseButton
button, const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownScenePos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in scene coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

`_ZN24QGraphicsSceneMouseEvent22setButtonDownScreenPos`

Name

`QGraphicsSceneMouseEvent::setButtonDownScreenPos` -- set the mouse position where the specified button was clicked in screen coordinates

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>

void QGraphicsSceneMouseEvent::setButtonDownScreenPos (Qt::MouseButton
button, const QPoint &pos);
```

Description

The `QGraphicsSceneMouseEvent::setButtonDownScreenPos()` function shall set the mouse cursor position where the specified button *button* was clicked to the given point *pos* in screen coordinates.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent6setPosERK7QPointF

Name

`QGraphicsSceneMouseEvent::setPos` -- set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneMouseEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEvent9setButtonEN2Qt11

Name

QGraphicsSceneMouseEvent::setButton -- set the mouse button associated with event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneMouseEvent::setButton (Qt::MouseButton button);
```

Description

The `QGraphicsSceneMouseEvent::setButton()` function shall set the mouse button associated with the event (i.e. the button that caused the event) to *button*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEventC1EN6QEvent4Type
_ZN24QGraphicsSceneMouseEventC2EN6QEvent4Type

Name

QGraphicsSceneMouseEvent::QGraphicsSceneMouseEvent -- QGraphicsSceneMouseEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneMouseEvent::QGraphicsSceneMouseEvent (QEvent::Type type);
```

Description

Constructs a new QGraphicsSceneMouseEvent of the specified type *type*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneMouseEventC1EN6QEvent4TypeE, _ZN24QGraphicsSceneMouseEventC2EN6QEvent4TypeE

_ZN24QGraphicsSceneWheelEvent10setButtonsE6QFla

Name

QGraphicsSceneWheelEvent::setButtons -- set the mouse buttons that were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setButtons (Qt::MouseButtonss buttons);
```

Description

The `QGraphicsSceneWheelEvent::setButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent11setScenePosERK

Name

QGraphicsSceneWheelEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneWheelEvent::setScenePos()` function shall set the position of the cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent12setModifiersE6QF

Name

QGraphicsSceneWheelEvent::setModifiers -- set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setModifiers (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneWheelEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event occurred) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent12setScreenPosERK6QPoint

Name

QGraphicsSceneWheelEvent::setScreenPos -- set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneWheelEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent6setPosERK7QPointF

Name

`QGraphicsSceneWheelEvent::setPos` -- set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneWheelEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEvent8setDeltaEi

Name

QGraphicsSceneWheelEvent::setDelta -- set the distance that the wheel is rotated

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneWheelEvent::setDelta (int delta);
```

Description

The `QGraphicsSceneWheelEvent::setDelta()` function shall set the distance that the wheel is rotated to *delta*, in eighths (1/8s) of a degree.

A positive value indicates that the wheel was rotated forwards away from the user; a negative value indicates that the wheel was rotated backwards toward the user.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEventC1EN6QEvent4TypeE
_ZN24QGraphicsSceneWheelEventC2EN6QEvent4TypeE

Name

QGraphicsSceneWheelEvent::QGraphicsSceneWheelEvent -- QGraphicsSceneWheelEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneWheelEvent::QGraphicsSceneWheelEvent (QEvent::Type type);
```

Description

Constructs a new QGraphicsSceneWheelEvent of the specified type *type* which should be always QEvent::GraphicsSceneWheel.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN24QGraphicsSceneWheelEventC1EN6QEvent4TypeE, **_ZN24QGraphicsSceneWheelEventC2EN6QEvent4TypeE**

_ZN27QGraphicsSceneDragDropEvent10setButtonsE6

Name

QGraphicsSceneDragDropEvent::setButtons -- set the mouse buttons that were pressed when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setButtons (Qt::MouseButtonss buttons);
```

Description

The `QGraphicsSceneDragDropButtons()` function shall set the mouse buttons associated with the event (i.e. buttons that were pressed when the event was created) to *buttons*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent11setMimeDataE

Name

QGraphicsSceneDragDropEvent::setMimeData -- set the MIME data for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setMimeData (const QMimeData *data);
```

Description

The `QGraphicsSceneDragDropEvent::setMimeData()` function shall set the MIME data for the event *data*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent11setScenePosE

Name

QGraphicsSceneDragDropEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setScenePos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent12setModifiersE

Name

`QGraphicsSceneDragDropEvent::setModifiers` -- set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>

void QGraphicsSceneDragDropEvent::setModifiers (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneDragDropEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event was created) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent12setScreenPos

Name

QGraphicsSceneDragDropEvent::setScreenPos -- set the event mouse position relative to the screen

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setScreenPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent17setProposedA

Name

QGraphicsSceneDragDropEvent::setProposedAction -- set the proposed action for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setProposedAction (Qt::DropAction
action);
```

Description

The `QGraphicsSceneDragDropEvent::setProposedAction()` function shall set the proposed action to *action*.

The *action* should be one of the possible actions set using the `QGraphicsSceneDragDropEvent::setPossibleActions()` function.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent18setPossibleAc

Name

QGraphicsSceneDragDropEvent::setPossibleActions -- set the possible drop actions that the drag can result in

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setPossibleActions (Qt::DropActions
actions);
```

Description

The `QGraphicsSceneDragDropEvent::setPossibleActions()` function shall set the possible drop actions that the drag can result in to *actions*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent6setPosERK7QF

Name

`QGraphicsSceneDragDropEvent::setPos` -- set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneDragDropEvent::setPos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEvent9setSourceEP7Q

Name

QGraphicsSceneDragDropEvent::setSource -- set the source widget for the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneDragDropEvent::setSource (QWidget *source);
```

Description

The `QGraphicsSceneDragDropEvent::setSource()` function shall set the source widget (i.e. the widget that created the drop event) to *source*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN27QGraphicsSceneDragDropEventC1EN6QEvent4T _ZN27QGraphicsSceneDragDropEventC2EN6QEvent4T

Name

QGraphicsSceneDragDropEvent::QGraphicsSceneDragDropEvent -- QGraphicsSceneDragDropEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneDragDropEvent::QGraphicsSceneDragDropEvent (QEvent::Type
type = None);
```

Description

Constructs a new QGraphicsSceneDragDropEvent of the specified type. The type should have one of the following values:

- QEvent::GraphicsSceneDragEnter
- QEvent::GraphicsSceneDragLeave
- QEvent::GraphicsSceneDragMove
- QEvent::GraphicsSceneDrop

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN2Qt12codecForHtmlERK10QByteArray

Name

Qt::codecForHtml -- detect encoding of the provided snippet of html

Synopsis

```
#include <QtGui/qtextdocument.h>
QTextCodec * Qt::codecForHtml (const QByteArray &ba);
```

Description

The `Qt::codecForHtml()` function has the same behavior as the `QTextCodec::codecForHtml()` function described in [QtCore 4.2.0](#).

_ZN30QGraphicsSceneContextMenuEvent11setScenePos

Name

QGraphicsSceneContextMenuEvent::setScenePos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setScenePos (const QPointF &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setScenePos()` function shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the scene.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent12setModifie

Name

`QGraphicsSceneContextMenuEvent::setModifiers` -- set the keyboard modifiers that were active when the event was created

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setModifiers (Qt::KeyboardModifiers
modifiers);
```

Description

The `QGraphicsSceneContextMenuEvent::setModifiers()` function shall set the keyboard modifiers associated with the event (i.e. modifiers that were active when the event occurred) to *modifiers*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent12setScreen

Name

QGraphicsSceneContextMenuEvent::setScreenPos -- set the event mouse position relative to the scene

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setScreenPos (const QPoint &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setScreenPos()` shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos* relative to the screen.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent6setPosERK

Name

`QGraphicsSceneContextMenuEvent::setPos` -- set the event mouse position relative to the widget that generated the event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setPos (const QPointF &pos);
```

Description

The `QGraphicsSceneContextMenuEvent::setPos()` shall set the position of the mouse cursor associated with the event (i.e. the position at the moment when the event occurred) to the given point *pos*. The position should be relative to the widget that generated the event.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEvent9setReasonE

Name

QGraphicsSceneContextMenuEvent::setReason -- set the reason for the context menu event

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
void QGraphicsSceneContextMenuEvent::setReason (Reason reason);
```

Description

The `QGraphicsSceneContextMenuEvent::setReason()` function shall set the reason for the context menu to *reason*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEventC1EN6QEvent4TypeE, _ZN30QGraphicsSceneContextMenuEventC2EN6QEvent4TypeE

Name

QGraphicsSceneContextMenuEvent::QGraphicsSceneContextMenuEvent -- QGraphicsSceneContextMenuEvent constructor

Synopsis

```
#include <QtGui/qgraphicssceneevent.h>
QGraphicsSceneContextMenuEvent::QGraphicsSceneContextMenuEvent
(QEvent::Type type = None);
```

Description

Constructs the graphics scene context menu event of the specified type.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN30QGraphicsSceneContextMenuEventC1EN6QEvent4TypeE, _ZN30QGraphicsSceneContextMenuEventC2EN6QEvent4TypeE

_ZN5QFont7cleanupEv

Name

QFont::cleanup -- cleanup the font system

Synopsis

```
#include <QtGui/qfont.h>
void QFont::cleanup(void);
```

Description

The `QFont::cleanup()` function shall cleanup the font system. This function should be called automatically when the application is finished.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN6QColor10invalidateEv

Name

QColor::invalidate -- mark the color as invalid

Synopsis

```
#include <QtGui/qcolor.h>
void QColor::invalidate (void);
```

Description

The `QColor::invalidate()` function shall mark the color as invalid and set. all components to zero. Alpha channel should be set to fully opaque (for compatibility with Qt3).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QLayout11widgetEventEP6QEvent

Name

QLayout::widgetEvent -- perform child widget layout when the parent widget is resized

Synopsis

```
#include <QtGui/qlayout.h>
void QLayout::widgetEvent (QEvent *e);
```

Description

The `QLayout::widgetEvent()` function shall perform child widget layout when the parent widget is resized. It should also handle removal of widgets.

The event `e` should have one of the following values:

- `QEvent::Resize`
- `QEvent::ChildRemoved`
- `QEvent::LayoutRequest`

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QPixmap19x11SetDefaultScreenEi

Name

QPixmap::x11SetDefaultScreen -- sets the default screen of the QPixmap object

Synopsis

```
#include <QtGui/qpixmap.h>
static int QPixmap::x11SetDefaultScreen (int screen);
```

Description

The `QPixmap::x11SetDefaultScreen()` function shall set the internal 'defaultScreen' property of the QPixmap object to *screen*.

The function shall return the previous defaultScreen value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN7QWidget11createWinIdEv

Name

QWidget::createWinId -- ensure that the widget is known to the windowing system

Synopsis

```
#include <QtGui/qwidget.h>
void QWidget::createWinId(void);
```

Description

The `QWidget::createWinId()` function shall ensure that the widget has a window system identifier (that is, known to the windowing system) and create such and identifier if it doesn't exist.

Value of the internal identifier can be checked by the inline `internalWinId()` member of the `QWidget` class.

_ZN7QWidget19overrideWindowStateE6QFlagsIN2Qt11

Name

QWidget::overrideWindowState -- set the window state on child widgets

Synopsis

```
#include <QtGui/qwidget.h>
void QWidget::overrideWindowState(Qt::WindowStates state);
```

Description

The `QWidget::overrideWindowState()` function shall set the window state on child widgets similar to the `setWindowState()`.

The difference is that the window state changed event has the `isOverride()` flag set.

This function is provided mainly to keep old applications that use `Q3Workspace` working.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

Name

QMenuBar::setCornerWidget -- set the position of the widget

Synopsis

```
#include <QtGui/qmenubar.h>
void QMenuBar::setCornerWidget(QWidget * w, Qt::Corner corner =
Qt::TopRightCorner);
```

Description

The `QMenuBar::setCornerWidget()` function shall set widget *w* to be shown directly on the left of the first or the right of the last menu item, depending on *corner*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QListView13doItemsLayoutEv

Name

QListView::doItemsLayout -- layout items

Synopsis

```
#include <QtGui/qListView.h>
void QListView::doItemsLayout(void);
```

Description

The `QListView::doItemsLayout()` function shall layout the items according to the flow and wrapping properties.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZN9QListView14resizeContentsEii

Name

QListView::resizeContents -- resize the internal contents of the view

Synopsis

```
#include <QtGui/qListView.h>
void QListView::resizeContents(int width, int height);
```

Description

The `QListView::resizeContents()` function shall resize the internal contents to *width* and *height* and set the scroll bar ranges accordingly.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel13setProxyModelERK11QModelIndex

Name

QProxyModel::setProxyModel -- change the model pointer to point to the proxy model

Synopsis

```
#include <QtGui/qproxymodel.h>
QModelIndex QProxyModel::setProxyModel(const QModelIndex & source_index);
```

Description

The `QProxyModel::setProxyModel()` function shall change the model pointer in the given *source_index* to point to the proxy model.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel14connectToModelEPK18QAbstra

Name

QProxyModel::connectToModel -- connect to all the signals emitted by the model

Synopsis

```
#include <QtGui/qproxymodel.h>
void QProxyModel::connectToModel(const QAbstractItemModel * model);
```

Description

The `QProxyModel::connectToModel()` function shall connect to all the signals emitted by given *model*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel14setSourceModelERK11QModelIndex

Name

QProxyModel::setSourceModel -- INSERT PURPOSE HERE

Synopsis

```
#include <QtGui/qproxymodel.h>
QModelIndex QProxyModel::setSourceModel(const QModelIndex & proxy_index);
```

Description

The `QProxyModel::setSourceModel()` function shall change the model pointer in the given `proxy_index` to point to the source model.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK11QProxyModel19disconnectFromModelEPK18Q/

Name

QProxyModel::disconnectFromModel -- disconnect from all signals emitted by the model

Synopsis

```
#include <QtGui/qproxymodel.h>
void QProxyModel::disconnectFromModel(const QAbstractItemModel * model);
```

Description

The `QProxyModel::disconnectFromModel()` function shall disconnect from all the signals emitted by the given *model*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine10systemClipEv

Name

QPaintEngine::systemClip -- get the system clip

Synopsis

```
#include <QtGui/qpaintengine.h>
QRegion QPaintEngine::systemClip (void);
```

Description

The `QPaintEngine::systemClip()` function shall return the system clip. The system clip is read only while the painter is active. An empty region indicates that system clip is not in use.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine10systemRectEv

Name

QPaintEngine::systemRect -- retrieve the rect for drawing within the backing store

Synopsis

```
#include <QtGui/qpaintengine.h>
QRect QPaintEngine::systemRect (void);
```

Description

The `QPaintEngine::systemRect()` function shall retrieve the rectangle for drawing within the backing store.

This function should only be used by the backing store, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK12QPaintEngine16coordinateOffsetEv

Name

QPaintEngine::coordinateOffset -- get the offset from the painters origo to the engines origo

Synopsis

```
#include <QtGui/qpaintengine.h>
virtual QPoint QPaintEngine::coordinateOffset (void);
```

Description

The `QPaintEngine::coordinateOffset()` function shall return the offset from the painters origo to the engines origo. This value is used by `QPainter` for engines who have internal double buffering.

This function only makes sense when the engine is active.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QGraphicsItem17supportsExtensionENS_9Exte

Name

QGraphicsItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions.

This function does nothing and should always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QGraphicsItem9extensionERK8QVariant

Name

QGraphicsItem::extension -- auxiliary virtual function

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsItem::extension (const QVariant &variant);
```

Description

The `QGraphicsItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

_ZNK13QInputContext11focusWidgetEv

Name

`QInputContext::focusWidget` -- get the widget that has an input focus for this input context

Synopsis

```
#include <QtGui/qinputcontext.h>
QWidget * QInputContext::focusWidget(void);
```

Description

The `QInputContext::focusWidget()` function shall return the widget that has an input focus for this input context.

The return value may differ from `holderWidget()` if the input context is shared between several text widgets.

Ordinary input methods should not call this function directly to keep platform independence and flexible configuration possibility.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

See Also

`setFocusWidget()`, `holderWidget()`

_ZNK13QItemDelegate10decorationERK20QStyleOption

Name

QItemDelegate::decoration -- get the pixmap used to decorate the root of the item view

Synopsis

```
#include <QtGui/qitemdelegate.h>
QPixmap QItemDelegate::decoration(const QStyleOptionViewItem & option,
const QVariant & variant);
```

Description

The `QItemDelegate::decoration()` function shall return the pixmap used to decorate the root of the item view.

The style *option* controls the appearance of the root; the *variant* refers to the data associated with an item.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QItemDelegate8selectedERK7QPixmapRK8QPa

Name

QItemDelegate::selected -- get the selected version of the given pixmap using the given palette

Synopsis

```
#include <QtGui/qitemdelegate.h>
QPixmap * QItemDelegate::selected(const QPixmap & pixmap, const QPalette
& palette, bool enabled);
```

Description

The `QItemDelegate::selected()` function shall return the selected version of the given *pixmap* using the given *palette*.

The *enabled* argument decides whether the normal or disabled highlight color of the palette is used.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK13QTextDocument7frameAtEi

Name

QTextDocument::frameAt -- get the frame that contains the given cursor position

Synopsis

```
#include <QtGui/qtextdocument.h>
QTextFrame * QTextDocument::frameAt(int pos);
```

Description

The `QTextDocument::frameAt()` function shall return the frame that contains the text cursor position *pos*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK14QTextTableCell12lastPositionEv

Name

QTextTableCell::lastPosition -- get the last position in the cell's document

Synopsis

```
#include <QtGui/qtexttable.h>
int QTextTableCell::lastPosition(void);
```

Description

The `QTextTableCell::lastPosition()` function shall return the last valid position in the document occupied by this cell.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK14QTextTableCell13firstPositionEv

Name

QTextTableCell::firstPosition -- get the first position in the cell's document

Synopsis

```
#include <QtGui/qtexttable.h>
int QTextTableCell::firstPosition(void);
```

Description

The `QTextTableCell::firstPosition()` function shall return the first valid position in the document occupied by this cell.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsLineItem17supportsExtensionEN13Q

Name

QGraphicsLineItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsLineItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsLineItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsLineItem9extensionERK8QVariant

Name

QGraphicsLineItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsLineItem::extension(const QVariant & variant);
```

Description

The `QGraphicsLineItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsPathItem17supportsExtensionEN13C

Name

QGraphicsPathItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPathItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsPathItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsPathItem9extensionERK8QVariant

Name

QGraphicsPathItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPathItem::extension(const QVariant & variant);
```

Description

The `QGraphicsPathItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsRectItem17supportsExtensionEN13C

Name

QGraphicsRectItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsRectItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsRectItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsRectItem9extensionERK8QVariant

Name

QGraphicsRectItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsRectItem::extension(const QVariant & variant);
```

Description

The `QGraphicsRectItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsTextItem17supportsExtensionEN13Q

Name

QGraphicsTextItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsTextItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsTextItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK17QGraphicsTextItem9extensionERK8QVariant

Name

QGraphicsTextItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsTextItem::extension(const QVariant & variant);
```

Description

The `QGraphicsTextItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK19QGraphicsPixmapItem17supportsExtensionEN

Name

QGraphicsPixmapItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPixmapItem::supportsExtension(Extension extension);
```

Description

The `QGraphicsPixmapItem::supportsExtension()` is provided as a hook to avoid problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK19QGraphicsPixmapItem9extensionERK8QVariant

Name

QGraphicsPixmapItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPixmapItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsPixmapItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsEllipseItem17supportsExtensionEN1

Name

QGraphicsEllipseItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsEllipseItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsEllipseItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsEllipseItem9extensionERK8QVariant

Name

QGraphicsEllipseItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsEllipseItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsEllipseItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsPolygonItem17supportsExtensionEN

Name

QGraphicsPolygonItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsPolygonItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsPolygonItem::supportsExtension()` function is provided as a hook to a void problems related to adding virtual functions. This functions shall always return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK20QGraphicsPolygonItem9extensionERK8QVariant

Name

QGraphicsPolygonItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsPolygonItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsPolygonItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK23QGraphicsSimpleTextItem17supportsExtension

Name

QGraphicsSimpleTextItem::supportsExtension -- check if the item supports the extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual bool QGraphicsSimpleTextItem::supportsExtension(Extension
extension);
```

Description

The `QGraphicsSimpleTextItem::supportsExtension()` function is provided as a hook to avoid problems related to adding virtual functions. This function shall always return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK23QGraphicsSimpleTextItem9extensionERK8QVa

Name

QGraphicsSimpleTextItem::extension -- get the item's extension

Synopsis

```
#include <QtGui/qgraphicsitem.h>
virtual QVariant QGraphicsSimpleTextItem::extension(const QVariant &
variant);
```

Description

The `QGraphicsSimpleTextItem::extension()` function shall simply return its argument. It is provided as a hook to avoid problems related to adding virtual functions.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK6QImage7devTypeEv

Name

QImage::devType -- get identifier designating that the object is a QImage

Synopsis

```
#include <QtGui/qimage.h>
int QImage::devType(void);
```

Description

The `QImage::devType()` shall always return the `QInternal::Image` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout13totalSizeHintEv

Name

QLayout::totalSizeHint -- get the preferred size for the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalSizeHint (void);
```

Description

The `QLayout::totalSizeHint()` function shall return the preferred size of the layout. The result shall be the same as for the `sizeHint()`, but with `contentsMargins` and menu bar taken into account.

Note that all inheritors of the `QLayoutItem` class should provide their own implementation of the `sizeHint()` function.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout16totalMaximumSizeEv

Name

QLayout::totalMaximumSize -- get the maximum size of the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalMaximumSize (void);
```

Description

The `QLayout::totalMaximumSize()` function has the same behavior as the `QLayout::maximumSize()` function described in [QtGui 4.2.0](#), but also takes `contentsMargins` and `menu bar` into account.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout16totalMinimumSizeEv

Name

QLayout::totalMinimumSize -- get the minimum size of the layout

Synopsis

```
#include <QtGui/qlayout.h>
QSize QLayout::totalMinimumSize (void);
```

Description

The `QLayout::totalMinimumSize()` function has the same behavior as the `QLayout::minimumSize()` function described in [QtGui 4.2.0](#), but also takes `contentsMargins` and `menu bar` into account.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QLayout19totalHeightForWidthEi

Name

QLayout::totalHeightForWidth -- get the preferred height for the layout

Synopsis

```
#include <QtGui/qlayout.h>
int QLayout::totalHeightForWidth (int w);
```

Description

The `QLayout::totalHeightForWidth()` function has the same behavior as the `QLayoutItem::heightForWidth()` function described in [QtGui 4.2.0](#), but also takes contentsMargins and menu bar into account (`heightForWidth()` is inherited by `QLayout` from `QLayoutItem`).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QPixmap7devTypeEv

Name

QPixmap::devType -- get identifier designating that the object is a QPixmap

Synopsis

```
#include <QtGui/qixmap.h>
int QPixmap::devType(void);
```

Description

The QPixmap::devType() function shall always return the QInternal::Pixmap value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK7QWidget7devTypeEv

Name

`QWidget::devType` -- get identifier designating that the object is a `QWidget`

Synopsis

```
#include <QtGui/qwidget.h>
int  QWidget::devType(void);
```

Description

The `QWidget::devType()` function shall always return the `QInternal::Widget` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar12cornerWidgetEN2Qt6CornerE

Name

QMenuBar::cornerWidget -- get the widget in the left of the first or the right of the last menu

Synopsis

```
#include <QtGui/qmenubar.h>
QWidget * QMenuBar::cornerWidget (Qt::Corner corner = Qt::TopRightCorner);
```

Description

The `QMenuBar::cornerWidget()` function shall return the widget in the left of the first or the right of the last menu item, depending on *corner*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar14actionGeometryEP7QAction

Name

QMenuBar::actionGeometry -- get geometry of an action

Synopsis

```
#include <QtGui/qmenubar.h>
QRect QMenuBar::actionGeometry(QAction * act);
```

Description

The `QMenuBar::actionGeometry()` function shall return the geometry of action *act*.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QMenuBar8actionAtERK6QPoint

Name

QMenuBar::actionAt -- get the item at the given point

Synopsis

```
#include <QtGui/qmenubar.h>
QAction * QMenuBar::actionAt(const QPoint & pt);
```

Description

The `QMenuBar::actionAt()` function shall return the item at the given point *pt*

If there is no item there or if it is a separator item then the function shall return 0.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

ZNK8QPainter3mapEiiPiS0

Name

QPainter::map -- apply the painter's transformation on the given point

Synopsis

```
#include <QtGui/qpainter.h>
void QPainter::map (int x, int y, int *rx, int *ry);
```

Description

The `QPainter::map()` function shall set (*rx* and *ry*) to the point that results from applying the painter's current transformation on the point (*x*, *y*).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QPicture7devTypeEv

Name

QPicture::devType -- get identifier designating that the object is a QPicture

Synopsis

```
#include <QtGui/qpicture.h>
int QPicture::devType(void);
```

Description

The `QPicture::devType()` function shall always return the `QInternal::Picture` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QPrinter7devTypeEv

Name

QPrinter::devType -- get identifier designating that the object is a QPrinter

Synopsis

```
#include <QtGui/qprinter.h>
int QPrinter::devType(void);
```

Description

The `QPrinter::devType()` function shall always return the `QInternal::Printer` value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK8QToolBar14actionGeometryEP7QAction

Name

QToolBar::actionGeometry -- get geometry of the toolbar item associated with the given action

Synopsis

```
#include <QtGui/qtoolbar.h>
QRect QToolBar::actionGeometry(QAction * action);
```

Description

The `QToolBar::actionGeometry()` function shall return the geometry of the toolbar item associated with the given *action*.

If no matching item is found, then the function shall return an invalid `QRect`.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo8overlineEv

Name

QFontInfo::overline -- get the overline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::overline (void);
```

Description

The `QFontInfo::overline()` function shall return the overline value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo9strikeOutEv

Name

QFontInfo::strikeOut -- get the underline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::strikeOut (void);
```

Description

The `QFontInfo::strikeOut()` function shall return the strikethrough value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QFontInfo9underlineEv

Name

QFontInfo::underline -- get the underline value of the matched window system font

Synopsis

```
#include <QtGui/qfontinfo.h>
bool QFontInfo::underline (void);
```

Description

The QFontInfo::underline() function shall return the underline value of the matched window system font.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

17.8. Interfaces for libQtXml

[Table 17-521](#) defines the library name and shared object name for the libQtXml library

Table 17-521. libQtXml Definition

Library:	libQtXml
SONAME:	libQtXml.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] [Itanium™ C++ ABI](#)

[QtXml] [QtXml 4.2.0](#)

17.8.1. Qt4 XML

17.12. Interface Definitions for libQtOpenGL

Table of Contents

[_ZN10QGLContext8setValidEb](#) -- set validity of the GL rendering context

The interfaces defined on the following pages are included in libQtOpenGL and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 17.10](#) shall behave as described in the referenced base document.

_ZN10QGLContext8setValidEb

Name

QGLContext::setValid -- set validity of the GL rendering context

Synopsis

```
#include <QtOpenGL/qgl.h>
void QGLContext::setValid (bool valid);
```

Description

The `QGLContext::setValid()` function shall set validity of the GL rendering context to *validity* (i.e. force the context to be either valid or not valid).

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

17.13. Interfaces for libQtSql

[Table 17-559](#) defines the library name and shared object name for the libQtSql library

Table 17-559. libQtSql Definition

Library:	libQtSql
SONAME:	libQtSql.so.4

The behavior of the interfaces in this library is specified by the following specifications:

17.14. Data Definitions for libQtSql

This section defines global identifiers and their values that are associated with interfaces contained in libQtSql. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to

supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.15. Interface Definitions for libQtSql

Table of Contents

[_ZN10QSqlResult9execBatchEb](#) -- executes a prepared query in batch mode

[_ZNK9QSqlField6typeIDEv](#) -- get the type identifier for the field

The interfaces defined on the following pages are included in libQtSql and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 17.13](#) shall behave as described in the referenced base document.

_ZN10QSqlResult9execBatchEb

Name

QSqlResult::execBatch -- executes a prepared query in batch mode

Synopsis

```
#include <QtSql/qsqlresult.h>
bool QSqlResult::execBatch (bool arrayBind);
```

Description

The `QSqlResult::execBatch()` function shall execute a prepared query in batch mode if the driver supports it, otherwise it should emulate a batch execution (for example, using `bindValue()` and `exec()` functions).

The `QSqlDriver::hasFeature()` can be used to find out whether a driver supports batch execution.

Batch execution can be faster for large amounts of data since it reduces network roundtrips.

For batch executions, bound values have to be provided as lists of variants (`QVariantList`). Each list must contain values of the same type. All lists must contain equal amount of values (rows).

NULL values should be passed in as typed `QVariants`, for example `QVariant(QVariant::Int)` should be used for an integer NULL value.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

_ZNK9QSqlField6typeIDEv

Name

QSqlField::typeID -- get the type identifier for the field

Synopsis

```
#include <QtSql/qsqldatabase.h>
int QSqlField::typeID(void);
```

Description

The `QSqlField::typeID()` function shall return the type ID for the field represented by the calling object.

If the returned value is negative, it means that the information is not available from the database.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

17.16. Interfaces for libQtSvg

Table 17-576 defines the library name and shared object name for the libQtSvg library

Table 17-576. libQtSvg Definition

Library:	libQtSvg
SONAME:	libQtSvg.so.4

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI

[QtSvg] QtSvg 4.2.0

[QtXml] QtXml 4.2.0

17.17. Data Definitions for libQtSvg

This section defines global identifiers and their values that are associated with interfaces contained in libQtSvg. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C language description of these data objects does not preclude their use by other programming languages.

17.17.1. QtSvg/qsvgrenderer.h

```
class QSvgRenderer;
```

17.17.2. QtSvg/qsvgwidget.h

```
typedef enum QtValidLicenseForSvgModule QtSvgModule;
class QSvgWidget;
```

17.18. Interfaces for libQtNetwork

[Table 17-583](#) defines the library name and shared object name for the libQtNetwork library

17.19. Data Definitions for libQtNetwork

This section defines global identifiers and their values that are associated with interfaces contained in libQtNetwork. These definitions are organized into groups that correspond to system headers. This convention is used as a convenience for the reader, and does not imply the existence of these headers, or their content. Where an interface is defined as requiring a particular system header file all of the data definitions for that system header file presented here shall be in effect.

This section gives data definitions to promote binary application portability, not to repeat source interface definitions available elsewhere. System providers and application developers should use this ABI to supplement - not to replace - source interface definition specifications.

This specification uses the [ISO C \(1999\)](#) C Language as the reference programming language, and data definitions are specified in ISO C format. The C language is used here as a convenient notation. Using a C

language description of these data objects does not preclude their use by other programming languages.

17.20. Interface Definitions for libQtNetwork

Table of Contents

[_ZN11QHttpHeader5parseERK7QString](#) -- parse the HTTP header string

[_ZN11QHttpHeader9parseLineERK7QStringi](#) -- parse the HTTP header line

The interfaces defined on the following pages are included in libQtNetwork and are defined by this specification. Unless otherwise noted, these interfaces shall be included in the source standard.

Other interfaces listed in [Section 17.18](#) shall behave as described in the referenced base document.

_ZN11QHttpHeader5parseERK7QString

Name

QHttpHeader::parse -- parse the HTTP header string

Synopsis

```
#include <QtNetwork/qhttp.h>
bool QHttpHeader::parse(const QString & str);
```

Description

The `QHttpHeader::parse()` function shall parse the HTTP header string *str* for header fields and add the keys/values it finds to the header's values.

If the string is not parsed successfully the `QHttpHeader` becomes invalid (that can be checked using the `isValid()` function).

The function shall return true if *str* was successfully parsed; otherwise it shall return false.

This function is not intended to be used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

See Also

`toString()`

_ZN11QHttpHeader9parseLineERK7QStringi

Name

QHttpHeader::parseLine -- parse the HTTP header line

Synopsis

```
#include <QtNetwork/qhttp.h>
bool QHttpHeader::parseLine(const QString & line, int number);
```

Description

The `QHttpHeader::parseLine()` function shall parse the single HTTP header line *line* which has the format "key, colon, space, value", and shall add key/value to the headers. The line number is a *number*.

The function shall return true if the line was successfully parsed and the key/value added; otherwise the function shall return false.

This function is not intended to be used used by applications directly, but may appear among application dependencies as a result of usage of other functions and macros.

Chapter 18. Library

18.1. Introduction

An conforming implementation shall support the following Qt library which provide interfaces for creating rich user applications, either graphical or console.

qt-mt A general-purpose application development library. Provides a GUI-independent layer of tool classes, network support, SQL database support, XML handling and a GUI layer featuring a device-independent drawing API for printing, screen output and OpenGL support.

There are three main parts to the definition of each of this library.

The "Interfaces" section defines the required library name and version, and the required public symbols (interfaces and global data), as well as symbol versions, if any.

The "Interface Definitions" section provides complete or partial definitions of certain interfaces where either this specification is the source specification, or where there are variations from the source specification. If an interface definition requires one or more header files, one of those headers shall include the function prototype for the interface.

For source definitions of interfaces which include a reference to a header file, the contents of such header files form a part of the specification. The "Data Definitions" section provides the binary-level details for the header files from the source specifications, such as values for macros and enumerated types, as well as structure layouts, sizes and padding, etc. These data definitions, although presented in the form of header files for convenience, should not be taken as representing complete header files, as they are a supplement to the source specifications. Application developers should follow the guidelines of the source specifications when determining which header files need to be included to completely resolve all references.

Note: While the Data Definitions supplement the source specifications, this specification itself does not require conforming implementations to supply any header files.

18.2. Interfaces for libqt-mt

Table 18-1 defines the library name and shared object name for the libqt-mt library

Table 18-1. libqt-mt Definition

Library:	libqt-mt
SONAME:	libqt-mt.so.3

The behavior of the interfaces in this library is specified by the following specifications:

[CXXABI-1.86] Itanium™ C++ ABI

[qt-mt] Qt 3.3.6

18.2.1. Qt

18.2.1.1. Class data for QNetworkProtocolFactoryBase

The virtual table for the QNetworkProtocolFactoryBase class is described by [Table 18-2](#)

Table 18-2. Primary vtable for QNetworkProtocolFactoryBase

Base Offset	0
Virtual Base Offset	0
RTTI	typeinfo for QNetworkProtocolFactoryBase
vfunc[0]:	__cxa_pure_virtual

18.2.6.6. Interfaces for Qt3 Date and Time

An LSB conforming implementation shall provide the generic functions for Qt3 Date and Time specified in [Table 18-31](#), with the full mandatory functionality as described in the referenced underlying specification.

Table 18-31. libqt-mt - Qt3 Date and Time Function Interfaces
