Reference number IEC 60748-23-4:2002(E)

#### **Publication numbering**

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series. For example, IEC 34-1 is now referred to as IEC 60034-1.

#### **Consolidated editions**

The IEC is now publishing consolidated versions of its publications. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

#### Further information on IEC publications

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology. Information relating to this publication, including its validity, is available in the IEC Catalogue of publications (see below) in addition to new editions, amendments and corrigenda. Information on the subjects under consideration and work in progress undertaken by the technical committee which has prepared this publication, as well as the list of publications issued, is also available from the following:

IEC Web Site (<u>www.iec.ch</u>)

#### Catalogue of IEC publications

The on-line catalogue on the IEC web site (<u>www.iec.ch/catlg-e.htm</u>) enables you to search by a variety of criteria including text searches, technical committees and date of publication. On-line information is also available on recently issued publications, withdrawn and replaced publications, as well as corrigenda.

#### IEC Just Published

This summary of recently issued publications (<u>www.iec.ch/JP.htm</u>) is also available by email. Please contact the Customer Service Centre (see below) for further information.

#### Customer Service Centre

If you have any questions regarding this publication or need further assistance, please contact the Customer Service Centre:

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

# SEMICONDUCTOR DEVICES - INTEGRATED CIRCUITS -

# Part 23-4: Hybrid integrated circuits and film structures – Manufacturing line certification – Blank detail specification

# FOREWORD

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical specifications, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
- 6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60748-23-4 has been prepared by subcommittee 47A: Integrated circuits, of IEC technical committee 47: Semiconductor devices.

The text of this standard is based on the European standard EN 165000-4 and the following documents:

FDIS	Report on voting
47A/641/FDIS	47A/652/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

IEC 60748-23-4 should be read in conjunction with Parts 23-1, 23-2 and 23-3.

The QC number that appears on the front cover of this publication is the specification number in the IEC Quality Assessment System for Electronic Components (IECQ).

The committee has decided that the contents of this publication will remain unchanged until 2006. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

# SEMICONDUCTOR DEVICES – INTEGRATED CIRCUITS –

# Part 23-4: Hybrid integrated circuits and film structures – Manufacturing line certification – Blank detail specification

### 1 General

### 1.1 Scope

This part of IEC 60748 serves as a Blank Detail Specification (BDS) for a high quality approval system and contains requirements for style and layout and minimum content of detail specifications. These requirements are applicable when the detail specification is published (e.g. for standard product).

#### **1.2** Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60748-23-1:2002, Semiconductor devices – Integrated circuits – Part 23-1: Hybrid integrated circuits and film structures – Manufacturing line certification – Generic specification

IEC 60748-23-2:2002, Semiconductor devices – Integrated circuits – Part 23-2: Hybrid integrated circuits and film structures – Manufacturing line certification – Internal visual inspection and special tests

IEC 60748-23-3:2002, Semiconductor devices – Integrated circuits – Part 23-3: Hybrid integrated circuits and film structures – Manufacturing line certification – Manufacturers' self audit check list and report

# 2 Guidance for preparation of a detail specification

The front page layout is illustrated. When the detail specifications for customer circuits are not published, the layout requirements of the blank detail specification are optional. A suggested front page layout is also illustrated. An example of a Customer Detail Specification (CDS) is also given.

The numbers between square brackets on the front page of the blank detail specification illustrated correspond to the following indications which should be given:

- [1] The name of the National Standards Organization under whose authority the detail specification is published and, if applicable, the organization from whom the detail specification is available.
- [2] The IECQ number of the detail specification.
- [3] The number and issue number of the IEC generic or sectional specification as relevant; also national reference if different.
- [4] If different from the IEC number, the national number of the detail specification, date of issue and any further information required by the national system, together with any amendment numbers.

- [5] A brief description of the technology and the type or function of the hybrid circuit.
- [6] Information on typical construction (where applicable).
- [7] An outline drawing with main dimensions which are of importance for interchangeability and/or reference to the appropriate national or international document for outlines. Alternatively, this drawing may be given in an annex to the detail specification.
- [8] The product assessment level schedule number covered by the detail specification.
- [9] Reference data giving information on the most important properties of the circuit which allow comparison between the various circuit types intended for the same, or for similar applications.

# 3 General data (BDS)

# 3.1 Recommended methods of mounting

The detail specification shall prescribe the method of mounting to be applied for normal use and for the application of the vibration and the bump or shock tests. The design of the circuit may be such that special mounting fixtures are required in its use. In this case the detail specification shall describe the mounting fixtures and they shall be used in the application of the vibration and bump or shock tests.

# 3.2 Dimensions, characteristics and conditions of use

# Table 1 – Reference data [9]

Where a range of products has the same basic function and is made in the same technology and envelope, this table will be used to detail the differences in characteristics.

The detail specification shall contain all information needed to describe adequately:

# 3.2.1 Performance and design of the circuit

(1) schematic circuit diagram;

- (2) resistance and capacitance values, tolerances, matching, tracking, power dissipation, temperature coefficients of resistors/temperature coefficients of capacitors where applicable;
- (3) limitations on resistance of conductors where applicable;
- (4) test circuit or method and performance limits;
- (5) added components (see 6.1.3 of IEC 60748-23-1).

# 3.2.2 Limiting conditions of use

Examples:

operating temperature range;

storage temperature range;

vibration, shock, bump severities;

climatic category;

maximum voltage.

NOTE Any interrelationship between the details specified in 1.2.1 and 1.2.2 should be stated.

# 3.2.3 Derating

Where applicable, a derating curve is to be included in this clause.

# 3.3 Related documents

A list of related documents and issue/date status should be given in this clause.

# 3.4 Marking

The marking of the circuit and primary package shall be in accordance with the requirements of clause 5 of IEC 60748-23-1.

The details of the marking of the circuit and primary package shall be given in full.

#### 3.5 Ordering information

Orders for circuits covered by this specification shall contain the following information:

- 1) quantity;
- 2) number of the detail specification with style reference and product assessment level number;
- 3) function of the circuit, if appropriate;
- 4) basic functional characteristics with tolerance, if appropriate.

#### 3.6 Additional information (not for inspection purposes)

The detail specification may include information (which is not normally required to be verified by the inspection procedure) such as circuit diagrams, curves, drawings and notes for the clarification of the detail specification.

# 3.7 Additional or increased severities or requirements to those specified in the product assessment level schedule

These requirements may be specified in section two of the detail specification, but do not modify the release level.

#### 4 Inspection requirements (BDS)

The detail specification shall prescribe the testing requirements of the initial delivery lot. This shall consist of all tests contained in the product assessment level schedule to which release is required, with the exception of those tests for which structural similarity may be invoked. The tests shall be subdivided into device screening (100 %), device sample testing, design evaluation and additional tests or requirements (see 1.7). Full details shall be given of test condition, pin-outs, mounting methods, etc.

The detail specification shall also prescribe the testing requirements of subsequent delivery lots. These shall consist of the screening tests, device sampling and such of the design evaluation tests as may be agreed between the manufacturer and the customer. For those design evaluation tests which are included the sample size and inspection level shall be as agreed between the manufacturer and the customer.

The content of any additional tests shall be as agreed between the manufacturer and the customer.

# (informative)

# Example of a Customer Detail Specification (CDS)

Customer: Touzac Espace Avenue Jean Brun 51079 Trouville FRANCE	CDS No. 57823 Issue 1 Date 5.6.93 Page 1 of 8
Concise circuits Manufacturer Electronic Road Lowtown AX4 2TT, UK	
Electronic components of assessed quality by Manufacturing Line Certification Approval in accordance with IEC 60748-23	Type number TE1
Generic Specification: Film and hybrid integrated circuits	
Outline and dimensions – (see annex 1) (first angle projection):	Thick/thin film hybrid integrated circuit with leaded and leadless added components. Logarithmic amplifier.
	Unencapsulated with solder at- tached lead frame suitable for soldering and printed wiring applications.
	Product assessment level schedule 5.
Dimensions in millimetres (see note)	

NOTE The non-dimensioned details do not affect the performance of the devices.

# A.1 General data (CDS)

# A.1.1 Recommended methods of mounting

Body mounted in  $Y_1$  mode.

### A.1.2 Dimensions, characteristics and conditions of use

The dimensions are given in figure A.1.

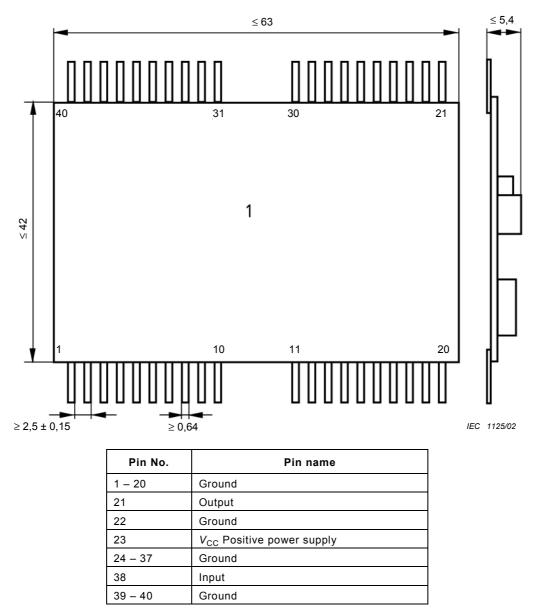

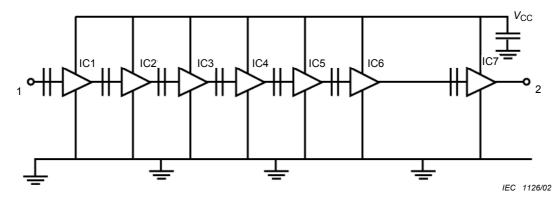

Figure A.1 – Dimensions and pin diagram

# A.1.2.1 Performance and design of the circuit

(1) Schematic circuit diagram

- 12 -

#### Key

- 1 Signal input
- 2 Output

Individual resistors and capacitor components are not shown.

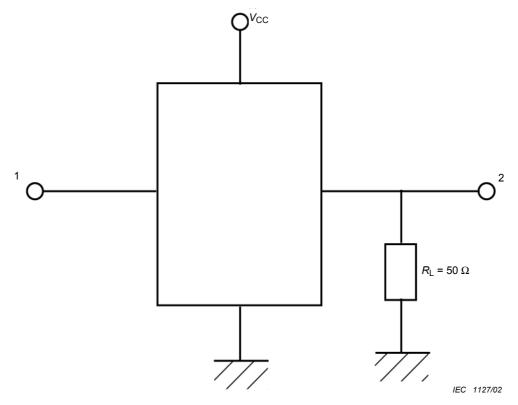

### Figure A.2 – Schematic circuit diagram

(2) Resistance and capacitance values

i)	Resistance: 20-pin chip carrier	15 Ω to 22 Ω
	Dual-in-line package	1,2 $\Omega$ to 2,2 $\Omega$
ii)	Capacitance: Chip capacitor (measured at 10 kHz	18,700 pF to 25,300 pF and 1 $V_{rms}$ )

(3) Limitations on resistance of conductors: not applicable

### (4) Test circuit

#### Key

- 1 Input
- 2 Output

#### Operating notes

All supply and ground connections should be as short as possible. High frequency supply decoupling is provided on the hybrid.

### Figure A.3 – Test circuit

(5) Added components

i) silicon monolithic integrated circuit SL1613C;

true log amplifier, hermetically sealed in 20-pin leadless chip carrier;

ii) silicon monolithic integrated circuit TI 113 low noise amplifier hermetically sealed in 8-pin flat pack.

# A.1.2.2 Limiting conditions of use (not for inspection purposes)

Absolute values (non-simultaneous)

V <sub>cc</sub> positive supply voltage				-0,5 V to 12 V		

Maximum input signal ( $P_{in}$ )  $R_s = 50 \Omega$  +15 dBm

 $T_{\rm sub}$  operating substrate

Temperature range	–55 °C to 125 °C
${\cal T}_{ m stg}$ storage temperature range	–65 °C to 150 °C
Shock	981 m/s <sup>2</sup> , 6 ms
Vibration	20 Hz to 2 000 Hz, 98 m/s <sup>2</sup>

This hybrid is static sensitive. Antistatic precautions should be taken.

# A.1.2.3 Derating (CDS)

Not applicable.

# A.1.3 Related documents

IEC 60748-23-1:2002, Semiconductor devices – Integrated circuits – Part 23-1: Hybrid integrated circuits and film structures – Manufacturing line certification – Generic specification

IEC 60748-23-2:2002, Semiconductor devices – Integrated circuits – Part 23-2: Hybrid integrated circuits and film structures – Manufacturing line certification – Internal visual inspection and special tests

IEC 60748-23-3:2002, Semiconductor devices – Integrated circuits – Part 23-3: Hybrid integrated circuits and film structures – Manufacturing line certification – Self audit check list and report for film and hybrid integrated circuit manufacturers

# A.1.4 Marking

- i) Each component shall bear the following markings:
  - a) date code;
  - b) terminal 1 identification;
  - c) manufacturer's type number;
  - d) factory identification code;
  - e) product assessment level schedule number.

All markings shall be on the lower surface except a) the date code.

- ii) Each package containing one or more of these hybrids shall bear all of the above markings and in addition:
  - f) quantity;
  - g) customer detail specification number;
  - h) ESDS warning label.

# A.1.5 Ordering information

Orders placed for hybrids circuits to this specification shall include the following:

- 1. quantity;
- 2. customer detail specification number, issue number and date;
- 3. manufacturer's type number;
- 4. product assessment level schedule number;
- 5. (CDS).

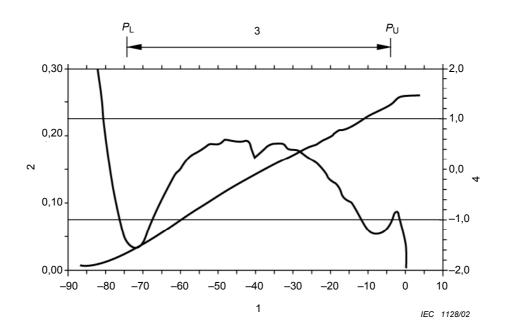

### A.1.6 Additional information (CDS)

The following characteristics (which are not for inspection purposes) describe the function of the circuit.

Characteristic at substrate temperature = 25 °C,  $V_{cc}$  = 10 V, f = 64 MHz,  $P_{in}$  = -75 dBm,  $R_{L}$  = 50  $\Omega$ , unless otherwise stated. Test circuit as in figure A.3.

Characteristic	Symbol	Min.	Typical	Max.	Units					
Supply current	I <sub>cc</sub>		180	240	mA					
Small signal gain	G	65	70	75	dB					
Upper 3 dB bandwidth	f <sub>u</sub>	120	200		MHz					
Lower 3 dB bandwidth	f <sub>1</sub>		2		MHz					
Output level (P <sub>in</sub> = -75 dBm)	V <sub>out</sub>	20	30	5	V <sub>rms</sub>					
Output level (P <sub>in</sub> = -5 dBm)	V <sub>out</sub>	230	250	40	V <sub>rms</sub>					
Maximum output level (P <sub>in</sub> = 4 dBm)	V <sub>lim</sub>	240	270	270	V <sub>rms</sub>					
Input dynamic range (see note)	D <sub>R</sub>	70	73	300	V <sub>rms</sub> dB					
Log accuracy	E	-1		+1	dB					
Upper end of dynamic range	P <sub>U</sub>	-7	-5	-3	dBm					
Lower end of dynamic range	$P_{L}$	-77	-75	-73	dBm					
Logarithmic slope	S	3	3,2	3,5	mV/dB					
Phase variation ( $P_{in}$ = -75 dBm to -5 dBm)	Р		5	10	degrees					
Input VSWR			1,2	1,5						
Output VSWR			1,2	1,5						
NOTE Dynamic range is defined as the input signal See figure 4.	I range wh	ere the log	NOTE Dynamic range is defined as the input signal range where the logarithmic error is less than 1 dB.
