Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 5127 was prepared by Technical Committee ISO/TC 46, *Information and documentation*, Subcommittee SC 3, *Terminology of information and documentation*.

It cancels and replaces ISO 5127-1:1983, ISO 5127-2:1983, ISO 5127-3:1988, ISO 5127-3a:1981, ISO 5127-6:1983, ISO 5127-11:1987 of which it constitutes a technical revision. It also replaces ISO/DIS 5127-1:1996, ISO/DIS 5127-2:1998, ISO/DIS 5127-4:1983, ISO/DIS 5127-5:1997, ISO/DIS 5127-7:1998, ISO/DIS 5127-8:1984, ISO/DIS 5127-9:1997, ISO/DIS 5127-10:1998, ISO/DIS 5127-12:1998 and ISO/DIS 5127-14:1996.

Introduction

The available parts of the ISO 5127 series were published in the 1980s. Since then, developments in the field of information and documentation have been so extensive that a revision of the ISO 5127 series was felt to have become necessary. Consequently, ISO/TC 46/SC 3 resolved, in May 1994 at its 26th meeting, to revise ISO 5127.

This International Standard (the revision) has the following structure:

- 1 Basic and framework terms
- 2 Documents, data media and their parts
- 3 Documentation institutions and their holdings
- 4 Documentation process
 - 4.1 Collection planning, development and acquisition
 - 4.2 Analysis, representation and content description
 - 4.3 Storage, search and retrieval
- 5 Use of information and documents
- 6 Preservation of documents
- 7 Legal aspects of information and documentation

This International Standard is published in English only but gives French equivalents for the English terms.

Information and documentation — Vocabulary

Scope

This International Standard is intended to facilitate international communication in the field of information and documentation. It presents terms and definitions of selected concepts relevant to the field and identifies relations between the entries.

The scope of this International Standard corresponds to that of ISO/TC 46, *Standardization of practices relating to libraries, documentation and information centres, indexing and abstracting services, archives, information science and publishing*.

Normative references

The following normative documents contain provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the normative documents indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

Principles and rules followed

Entries

This International Standard comprises a number of entries; the term entry is to be understood as follows: "Set of elements consisting of an index number, a preferred term, admitted synonyms and a definition. In addition, a set may include examples and notes to facilitate the understanding of the concept or to refer to other terminological use in other fields". Terms dealing with terminology work are used with the meanings defined in ISO 1087.

Organization of an entry

The entries are organized according to ISO 10241.

Classification of an entry

Each entry is numbered according to the logical structure given in the introduction.

Selection of terms and wording of definitions

The selection of terms and the wording of definitions follows the rules established in ISO 704.

Spelling

Terms, definitions, examples and notes are given in what may be considered as the preferred spelling in the United Kingdom.

Indexes

At the end of clause 7, two alphabetical indexes, in English and French, include all the terms defined and their French equivalents. Multiple-word terms appear in alphabetical order both by natural order of words and by inverted order.
