Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2.

The main task of technical committees is to prepare International Standards. Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

ISO 7719 was prepared by Technical Committee ISO/TC 2, Fasteners, Subcommittee SC 12, Fasteners with metric internal thread.

This third edition cancels and replaces the second edition (ISO 7719:1997), of which it constitutes a minor revision.

Prevailing torque type all-metal hexagon regular nuts — Property classes 5, 8 and 10

1 Scope

This International Standard specifies the characteristics of prevailing torque type all-metal hexagon regular nuts, with threads from M5 up to and including M36, in product grade A for threads up to and including M16 and product grade B for threads above M16, and with property classes 5, 8 and 10.

NOTE The dimensions of the nuts with the exception of h_{max} correspond to those given in ISO 4032.

If other specifications are required, they can be selected from existing International Standards, for example ISO 261, ISO 724, ISO 898-2, ISO 965-2, ISO 2320 and ISO 4759-1.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable to its application. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 225, Fasteners — Bolts, screws, studs and nuts — Symbols and descriptions of dimensions

ISO 261, ISO general purpose metric screw threads — General plan

ISO 724, ISO general-purpose metric screw threads — Basic dimensions

ISO 898-2, Mechanical properties of fasteners made of carbon steel and alloy steel — Part 2: Nuts with specified property classes — Coarse thread and fine pitch thread

ISO 965-2, ISO general purpose metric screw threads — Tolerances — Part 2: Limits of sizes for general purpose external and internal screw threads — Medium quality

ISO 2320, Prevailing torque type steel nuts — Mechanical and performance properties

ISO 3269, Fasteners — Acceptance inspection

ISO 4042, Fasteners — Electroplated coatings

ISO 4759-1, Tolerances for fasteners — Part 1: Bolts, screws, studs and nuts — Product grades A, B and C

ISO 6157-2, Fasteners — Surface discontinuities — Part 2: Nuts

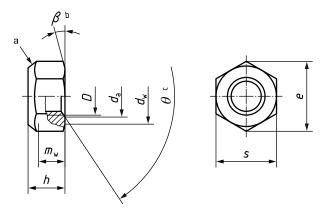

ISO 8992, Fasteners — General requirements for bolts, screws, studs and nuts

ISO 10683, Fasteners — Non-electrolytically applied zinc flake coatings

3 Dimensions

See Figure 1 and Table 1.

Symbols and descriptions of dimensions are specified in ISO 225.

- Prevailing torque element, shape at the discretion of the manufacturer.
- β = 15° to 30°.
- θ = 90° to 120°.

Material		Steel					
General requirements	International Standard	ISO 8992					
Thread	Tolerance class	6H					
	International Standards	ISO 261, ISO 724, ISO 965-2					
Mechanical and	Property class	5, 8, 10					
performance properties	International Standards	ISO 898-2, ISO 2320					
Tolerance	Product grade	For <i>D</i> ≤ M16: A					
		For <i>D></i> M16: B					
	International Standard	ISO 4759-1					
		As processed					
		Requirements for electroplating are specified in ISO 4042.					
Finish — Coating		Requirements for non-electrolytically applied zinc flake coatings are specified in ISO 10683.					
		Additional requirements or other finishes or coatings shall be agreed between the supplier and the purchaser.					
Surface integrity		Limits for surface discontinuities are specified in ISO 6157-2.					
Acceptability		Acceptance inspection is specified in ISO 3269.					

5 Designation

EXAMPLE A prevailing torque type all-metal hexagon regular nut, with thread M12 and property class 8 is designated as follows:
