Subject: AT&T

Brice,

I spoke to one of our reps for extended carrier covera=e options and would like to take him out to the ranch to see if he has a go=d solution. AT&T does deploy what they call Femto Cells in remote areas=that are used to make phone calls through the local Internet. The Femto Cel=s work on the AT&T local frequencies for the cell phones and the unit i= connected to the Internet through the Ranch Ethernet.

I am checking to see if these are available for use at the r=nch.

Thanks,

Richard L. Boltz
