Jeffrey

You are correct saying the GV is an Analog cockpit compared to Digital cockpit in G550,, 90% pertaining to avionics suite difference. Aircraft systems synoptic pages are also displayed on G550 cockpit tubes, GV has minimal display.

The 6 foot radio rack behind copilots seat in GV is similar to our GIV,, The G550 is approx 3 feet long, due to Modules instead of Black Boxes and re=ays

Aircraft flight systems (Hydraulic/electrical) are duplicate G550 and GV.,w=th some slight difference,

Mark still indicates GV is a great plane, but only 115 GV's in service compa=ed to over 500 G550's in service,. Product support from Gulfstream will favo= G550 greatly,,
