Greetings all as per your request here is the info on high performance=(racing) steering for Nanna. I contacted Latham Marine the leader in hi=h performance steering for boats, they have a kit for Yamahas 350's=that works for the 300's. This kit includes helm, steering wheel, n=w rams and all the hardware necessary to install it, except hoses and fitt=ngs. Nothing that we have right now is compatible with this system. =his kit without power steering is 6,400\$, with the extra power steering pu=p and hardware its 10,400\$. This system can be adjusted from 4 to 6 tur=s no more, and is rated for 105mph. The salesman indicated at high speed=s less turns of the wheel are recomended for better steering and safety me=ning less turns the boat responds quicker.

Right now I have the power steering pump from Prd that we took of and =re going to test it on Nanna. I will report the findings as soon as we =re done testing.

regards
Carlos
