Subject: aren't dreams not only hallucinations but delusions?

Yr thought is fruitful for my own thinking; 2 symptoms of schizophrenia are=prominent auditory hallucinations & bizarre delusions. In delusions=I interpret incorrectly instead of sensing incorrectly. In dreaming I s=e things that aren't there, & don't necessarily understand the= rationally; something ordinary can be ominous or frightening in a dream.=A0 A connection between dream-thought ("Traumlogik") & schiz=might shed light on dreaming as well as on schiz.

Thanks again, & hope to see you up here--

David
