Subject: Summary of water & power technologies

Boris,

Please find attached a summary of Deka's water and power technologies. It is mostly high level but should touch on everything we discussed in person. We would greatly appreciate it if you could pass this along to Jeffery soon as well - we think that the concept of distributed power & water fueled by local waste and resources could be relevant information during his trek through northern Africa.

We didn't get extremely technical with this specific version so let us know if you have any further questions.

All the best,

Robyn
