Subject: Re: pool stairs

There should be a three ft wall on both sides of landing

Sorry for all the typos .Sent from my iPhone

attached is a stair running wall to wall 12' 10" is the distance between the walls

my problem is the landing at the top is not good,you will be looking at the end of the building and down into the walks below

I think we need a landscape buffer between the stair and wall

we cannot raise the wall as a buffer as it is already 7' tall

the 6' stair with landing at bottom seems to work best allowing a 4' plus planter

thoughts? gary--
