Subject: WEATHER UPDATE -- SAT SEPTEMBER 1

V.I. WEATHER SUMMARY

Sunny conditions are expected across the Virgin Islands today. At 5 a.m., the center of Tropical Storm Leslie was located near 17.8 degrees north, 53.5 degrees west or about 769 miles east of St. Croix. The tropical storm was moving to the west-northwest at 17 miles per hour. Tropical Storm Leslie is expected to turn to the northwest tonight along with a decrease in forward speed that should continue through Sunday.

On the forecast track, Tropical Storm Leslie will make its closest approach to the Virgin Islands on Sunday night around 7 pm when the center passes some 415 miles to the northeast of St. John. At that time, Leslie will be a Category One hurricane with top winds of 75- 80 miles per hour.

The only effect from Tropical Storm Leslie will be easterly swells that will start arriving into the Atlantic coastal waters Sunday morning creating hazardous seas. Small craft advisories are in effect for

Sunday for the adjacent Atlantic waters and the waters of the Anegada Passage due to seven to nine foot seas in east-northeasterly swells.
