Jeffrey,

Please take a look at the enclosed photo. Is this something that you could accept? It is a tree colored cast resin ring that can be placed in any height on the trees and function as uplight, downlight or a mixture of both.

The amount of work we could save by not having landscaping constantly ruin the ground installed lights would be significant. They come in LED version that has the same color temperature as halogen. Electric saving would be very significant as well.

I was thinking about getting a couple of them to do a test install and see if you like them.
