Sorry for the email flood..

While studying I realized I forgot a big counterargument to your derivative on the cyber stuff: even if you want to short the bond through a derivative, who's going to take the other side of the bet? Everyone is/should be aware of the moral hazard there I think

Not saying that invalidates your thesis on the fact that this can't work because it's hard for investors to understand - just saying that I don't think shorting it is a risk

Anyway, I'll go back to my studies :)
