Dear Jeffrey;

Do you know any medicine, drugs can recover the cognitive ability of patient with an advanced stage to active, even normal cognition?

Many clinical trials for Alzheimer's patients with earlier, even middle stage are all failed. And scientist said the clinical trial for the patients with severe or middle stage are too late to recover their cognition, because their neurons are almost dead. Is it true?

I am now happy to open the non-confidential data to you. You may be surprised at my data. Because my TSH1 can induce the strong recovery process of the sever advanced stage of Alzheimer's disease patients. Especially TSH1 can induce the hippocampal volume recovery in No 1 patient.

Now I sincerely request you to support my TSH1 developing. As you know, Alzheimer's disease is known as a non-cure disease, non-treatable disease, but now TSH1 can cure and recover AD cognitive impairment.

Sincerely yours

Tohru Hasegawa, Ph.D and Prof.
