Subject: Brief "heads up computing" summary

Greatly appreciate talk yesterday. In putting the proposition briefly to Sirius, I'd say:

People need to keep up with their online lives while they drive, hands-off, no-screen. So we put a lifestream in your car. It's a linear structure in the Cloud, a stream of messages, reminders, email etc. like beads on a string. The structure is so simple, it's easy to operate by voice. ("What's next? Go back one. Send this reply.") We assume a cell-based uplink plus satellite downlink. We know this will happen; we think we know the best way to make it happen.
