

SECRET SUFI PRACTICES OF THE BAKTASHI ORDER REVEALED

This book contains secret spiritual practices of the Baktashi Order as taught in the early part of the twentieth century. These practices make use of signs and vocal formulas, which, if performed exactly as to their conclusion, transform the individual into the object of the *magnum opus* of medieval alchemists.

These secrets are made plain in this text originally published in Germany in 1924 by

Baron Rudolf von Sebottendorf
Founder of the Thule Society

The Baron was ordered to write the book by the order and to make the practices known to the world.

The Practice of the Ancient Turkish Freemasons

The Key to the Understanding of Alchemy

A Presentation of the Ritual, Doctrine and Signs of
Recognition Among the Oriental Freemasons

Introduction

Libelli habeant sua fata ⁽¹⁾— the manuscript belongs to the book. The manuscript of this book had already been completed in another version at the beginning of the war,⁽²⁾ but all sorts of opposing events prevented its appearance. Now a not completely voluntary stay in Switzerland is giving me the opportunity to revise the manuscript and prepare it for the press.

And it was good that the book did not appear earlier. Souls have become more receptive. There is one discovery after another now, and each is a death-blow to the materialistic philosophy and bogus monism. Just yesterday I read that they were successful in splitting the nitrogen atom, dividing it into hydrogen and helium.

Whoever has been paying attention to events in the Orient over the last few years must continually ask himself in amazement: "How is it possible that a people such as the Turks, who aren't even a homogenous people, have been able to develop such perseverance, turn it against a world of enemies, and eventually carry it to victory? Whoever knew how exhausted the people already were by the on-going burdens of war, which only a Muslim can bear, when they entered the world war must also be amazed at their patience and endurance under the most difficult conditions. What is then the difference between Germany, which has almost had to succumb under the yoke of a horrendous peace, and Turkey, which rejected a similar peace and fought on to obtain different conditions?⁽³⁾

The modern intellectual, schooled in materialism, will thanklessly strive to find the underlying reason for this because he is always focusing on externalities. He can in no way understand that it is the spiritual guidance and training alone, which every Muslim strives after from his youth forward, which have born him through these hard times. We are experiencing the shameful spectacle of a great part of the German people throwing themselves into the arms of the Bolsheviks expecting every sort of benefit from those who have declared materialism to be God, and we see that Turkey, this small weakened land, certainly made use of the aid the Bolsheviks afforded them, but that they were far from throwing themselves into the arms of Bolshevism, on the contrary, it finds no place among them.

We see that one folk, which had been counted as one of the most intellectually advanced, wanted to make just such a step backward, while another folk – previously scorned as being inferior – clearly recognized this step as ruinous and declined to participate, and not only rejected the step in its particulars, but in its entirety as well.

“Just tether your ass and commend it to God,” goes a Turkish proverb. The West has always been of the belief that Islam is stagnant as a religion. Nothing is further from the truth; Islam is more viable than the Christian religion. It has proven its viability. The following exploration clearly shows us the well-spring of the power of Islam, it is up to us to make the well-spring useful to the Christian religion as well. It was living water from this well-spring that brought everything to fruition in the early period of the Church, and which produced the most glorious flowering of the Middle Ages; only rationalism and materialism blocked this well-spring.

I will not be committing any sacrilege or profanation if I uncover this well-spring. Whoever reads through this book attentively, and resolves to do the exercises shown here, can in no way misuse the powers acquired, for only the one who is upstanding, courageous and determined will be able to persevere to the end and profit from the exercises. By profit I do not mean, of course, external success, that

only enters into it when a person has become good in his core.

The exercises of the oriental Freemasons are nothing other than work on one's self, for ennobling, and for the acquisition of higher knowledge. From the later explanations it will become clear that they contain the secret of the Rosicrucians and alchemists, and demonstrate the preparation of the stone which is what the seeker is longing for.

I said: *Nothing more*– but that is the highest, the most unique thing which the seeker for knowledge can strive after. I will not require faith in my words from the reader, but rather I will prove my explanations; I will prove that oriental Freemasonry authentically preserves to this day the ancient doctrines of wisdom, which modern Freemasonry has forgotten, for it must be said here at the beginning that the Freemasonic constitution of 1717 was a detour from the right way.

Laws made from the outside cannot provide for the salvation of humanity. These laws are always being obliterated by other laws and are always having to be replaced by other laws– but rather it is the work from the inside out alone which can bring us salvation. Whoever can consciously live according to the divine laws will perceive this as a duty and not as something coerced and he will act for the highest benefit of mankind, which will actually be the highest benefit to the individual as well. The divine laws are, however, absolutely unambiguous.

The only requirement I make of readers is that they be aware of their unity within God. Without this awareness the exercises are useless. Whoever still believes in the old monism, such as propagated by Büchner and Häckel, is just requested, if he is indeed seeking true knowledge, to read without prejudice an opponent of this view, e.g. Surya: *Wahrer und Falscher Monismus*.⁽⁴⁾

And now go forth, you little book, the hour is auspicious. I began this introduction on the third of February 1924 at 12:30 mid-day on 46° north latitude and 9° east longitude. Righteously bring salvation to the multitude through true knowledge.

I PRACTICE

Islam means submission, that is, submission to the will of God. The believer can just commend himself to the will of God simply because it is the will of God. He feels secure and does not ask why this is so and that is different— he fulfills the divine law simply because it is the revealed law of God. He accepts his fate as being immutable and at the most attempts by means of prayer to implore for mercy from God when the burden becomes too great for him. But the sign of the true believer will consistently be that he does not ask for release from the burden, but rather for the strength to the bale to bear it. "Lead us in the way of those who do not err," the Prophet prescribes to those who pray.

This faithful condition is what is most worthy to strive after according to all religious systems. Actually he is also the most happy, it is he who the Prophet values most highly and he represents this as his only goal— and therefore his religion is called *Islam*.

Now beside the belief there is something else that makes it equally possible for a person to yield to his fate; it is no longer faith but knowledge— knowledge of the divine laws. The one who knows no longer fulfills this law blindly, but rather knowingly. The truly wise one is very near to the believer, but he is superior to the believer.

The Prophet created a very wise institution to open the way to knowledge for everyone who truly seeks it. According to this system in the Koran he provided explicit signs which point the way to knowledge and which have to reveal the law of creation to someone who gains knowledge from within his own being. The highest form of knowledge will always lead the wise to yield to Divine Providence without complaint— that is, to Islam through knowledge.

In what follows we will concern ourselves with this path. How the Prophet himself came into possession of this knowledge is told in the form of the following legend.

Not far from Mecca there lived at the time of Mohammed an aged hermit, Ben Chasi, who was teaching the Prophet. When the lesson was over he gave him a metallic plate upon which were engraved formulas, the meaning of which the then 30-year old Prophet had just learned. Soon thereafter the hermit died, but Mohammed kept on teaching the secret of these formulas in the most intimate circles. Abu Bekr, the first calif, inherited the plate and the knowledge which only spread within a small circle after the death of the Prophet: this is the secret knowledge of the oriental Freemasons.

In order to ensure against the loss of the formulas the Prophet distributed them throughout the Koran according to a precise key. The key is known, and the formulas are preserved in the Koran, such that the possibility remains for reconstructing the system at any time.

The formulas are preserved in the so-called abbreviated letters,⁽⁵⁾ the meaning of which is debated among orientalists as well as different commentators. Some are of the opinion that these letters are signatures. Individual Suras certainly originated under highly variable conditions: the Prophet dictated some, others he recited while friends wrote them down, still others were recorded later from memory. Upon collecting the Suras the letters which indicated the originator of the Sura would have remained, but now without their meaning.

Some European scholars are of the view that these letters represent notes by the scribe. Thus ALM is supposed to mean: *amara li muhamed*— Mohammed commanded me to write.

Arabic commentators view these letters as holy abbreviations. Thus ALM mean: *allah latif madshid*— God is good — or as another thinks: *ana lahu alamu*— I am the God who knows.

For others the letters are to be interpreted in a cabalistic sense. Certainly all the Suras in which these letters occur contain definite indications that they have something special to say.

The Arabic language, like all the Semitic languages, does not write the vowels. If one does not read these letters as such, but rather as words, they yield no meaning. For this reason people have been scratching their heads over the meaning of these letters. But in actuality these are the secret formulas concealed in the letters which someone who knows the truth can now easily read and pronounce. All of these formulas are compounds of the vowel A with one or several consonants.

Now the secret doctrine shows that the Sura in which the formula occurs specifies the number of days in the system the given formula is to be practiced. The table of the Prophet appears as follows:

Number of the Sura	Name of the Sura	Formula
2	The Cow	alam
3	Amran's Family	alam
7	El Araf	alamas
10	Jonah	alar
11	Houd	alar
12	Joseph	alar
13	Thunder	alamar
14	Abraham	alar
15	A-hijr	alar
19	Mary	kaha ya as
20	Ta ha	ta ha
26	The Poet	tasam
27	The Ant	tas
28	The Narration	tasam
29	The Spider	alam
30	The Greeks	alam
31	The Wise	alam
32	Adoration	alam
36	Ya sin	yas
38	Sad	sa
40	The Believer	cham
41	Revelations Well Expounded	cham
42	Consultation	cham asak
43	Gold Adornments	cham
44	Smoke	cham
45	Kneeling	cham
46	Al ahqaf	cham
50	Qaf	ka
68	The Feather	na

822 days

14 different formulas

The number of days result in 25 lunar months in which three days are missing. On these three days the one who was dedicating himself to these exercises was occupied doing something else, to which we will return later.

The formulas are present in 29 Suras. For those who do not know anything about astrology it is noted that astrology knows of 28 mansions of the Moon, which amounts to the 29-day synodical rotation of the Moon. The Persian mystic Mahmud Shebisteri, a Mel Mevlevi Dervish says in the *gulshen ras*:

And because Cancer found itself related to the Moon
It bound itself by head and tail to the Moon
Through stations twenty-eight goes its course
It positions itself in opposition to the Sun's light
Then it shrivels up like a date-stalk
As God ordained, who is alone the one who wisely
Contemplates this correctly, as a perfect man
Understands it will, there is nothing vain about it
Seek only in the Koran, there you will find the plan
Whoever can't find it has weak insight.

Astrologically the zodiacal sign Cancer is the house of the Moon, which represents the soul. Here the house is used for the human body. The 28 stations which run the soul through the secret table of the Prophet corresponds to the way of the Moon— every station is equal to the time span in which a formula is exercised. Thus the first station is the two-day exercise of **alam**, the second station likewise the three-day exercise of **alam**, the third station the seven-day exercise of **alamas**, etc.*

This is the path the Dervish order is accustomed to taking. This not only has to do with a general sort of knowledge, but they also attempt to acquire special powers by means of a special practice. However, for the most part the Dervishes are the people who strive after higher knowledge, and from whom the spiritual leaders of Islam will be drawn.

If they pass the time of testing, which usually lasts 825 days, then they will receive higher initiation, if they are capable and if they have the desire. Or, on the other hand, they receive a more special instruction in order to attain certain magical characteristics. If they show no further capabilities they just remain in the lower grades of the order.

This higher initiation is the exercise of Freemasonry, and it is, as we will see later, the work of the alchemists and Rosicrucians.

*The twenty-ninth station is then the completion of the path, the return of the soul to a higher stage, the house, the body has become more spiritualized.

These exercises are characterized by the use of the three signs or recognition- employed by modern Freemasons: sign, grip and word- except these are not signs of recognition, not mere symbols in the best case, but rather magical operations designed to induct the finer radiation of the primordial power – to incorporate them into the body and thereby make the body more spiritual, to give the balance of power to the spirit over the body.

The signs are three different positions of the hand, known by the vowels which are indicated by them.

I. The I-sign

The right hand is in a fist and from the fist the index finger is extended straight out; the hand is put in such a position that the finger is directed straight upward into the heights so that the letter **I** is represented.

II. The A-sign

The hand is held in such a way that all the fingers lay in a flat plane; the thumb is now extended so that it forms an angle of 90 degrees, a right angle with the line of the index finger.

III. The O-sign

One is to bend the fingers and thumb of the angled hand in such a way that the tip of the thumb just touches the tip of the index finger. The thumb, index finger and the part of the hand between these two digits form a circle, an **O**.

The grips are performed in proximity to different parts of the body.

I. The Neck-grip

One lays the angled hand on the neck in such a way that the thumb touches the right carotid artery, the index finger lies on the larynx and the other fingers are in a flat plane with the index finger. The angled hand is withdrawn sharply with the index finger moving across the larynx. until the hand is situated in a position equal in height to the right shoulder, then it is allowed to drop down.

II. The Chest-grip

This grip is performed over the chest with the angled right hand. The correct height of the grip is obtained when one places the angled right hand in the neck-grip and then positions the angled left hand in such a way that the thumb just touches the little finger of the right hand. That is just the right height. The grip is so positioned that the tips of the four fingers just touch the left arm, so that the palm is lying on the left breast. The hand with the outstretched thumb is drawn over to the right until the finger tips are touching the right side of the body.

III. The Middle-grip

Present-day Masonry no longer uses this grip, which is performed somewhat lower down than the chest-grip. The right position is found when one places the angled right hand in the manner of the chest-grip and then again places the angled left hand in such a way that the outspread thumb just touches the little finger of the right hand.

IV. The Master- or Belly-grip

This grip is positioned the breadth of the angled hand lower than the Middle-grip. It is moved from below the navel up over the solar plexus, and thus performed in a manner similar to the previous grips. —

The words have already been given in the Koranic table. Before these formulas can be used, however, one first uses the three vowels:

I A O

and later the compounds:

si sa so

I and **Si** are only used in connection with the **I**-sign,
A and **Sa** only in connection with the **A**-sign and
O and **So** only in connection with the **O**-sign.

A question is posed to anyone taking on these exercises which he has to answer in a time span of three days. Upon the answer to this question depends whether the student must undergo further instruction or whether he can

immediately enter into the exercises. These exercises can last for from between three to twenty-five months; this depends entirely on the student. There are actually very precise signs by which one can tell whether one can proceed, or whether one must start over from the beginning. The first condition which must be met upon beginning the exercises is patience, the second perseverance, and the third courage.

The numbers I give here represent the shortest times, which should be compared to the numbers on the table on page 45. Above all one should notice that the work should not be rushed. "The Devil is mixed up in a hurried shop," says a Turkish proverb.

The indispensable condition upon entering the exercises is faith in GOD, the awareness that the individual is one with GOD. I repeat this reminder for those who wish to begin these exercises, which in no case can cause harm to anyone who has a selfless spirit. But they may be harmful to anyone who undertakes them with the selfish intention to delve into secrets which he is not supposed to know. In the best case he will perform the exercises without success and will become annoyed at having spent money on such a worthless book.

The work is divided into three parts:

- I. the Preliminary work
- II. the Main work
- III. the Pursuant work

The Preliminary Work

One stands upright, forms the **I**-sign and concentrates his whole attention on the uplifted finger while continuing to think of nothing other than **I, I, I**. One will soon notice that the finger begins to become warm in a most peculiar fashion. When this warming becomes noticeable one allows the hand to fall, and after a while the **A**-sign is formed. One should attempt to vivify the **A** in a similar way until one feels a dry warmth in the thumb.

Then one immediately forms the **O** and animates it in the same way. The Oriental, who sequesters himself in the solitude of his *tecke*, i.e. of a Dervish establishment, will feel definite signs of the kind indicated on the first day, the Occidental, who will do the exercise no more than about 10 minutes in the morning or evening, will need a few days longer.

As soon as the warming takes place, the student must form the **I** and animate the finger with **Si, Si, Si** until he feels that is becoming warm. He then lets his hand drop and immediately forms the **A**. He animates the angled hand with **Sa, Sa, Sa** and after a while guides his hand to his neck, makes the hand grip, and thereby conducts the inducted rarified forces of nature to his neck. During this he constantly thinks **Sa, Sa, Sa**, then sharply removes his hand and forms the **O**, which, after he has animated it with the syllable **So, So, So**, he moves to his solar plexus in the Master-grip after a while.

This preliminary works encompasses a time span of ten days, that is: three days of animation with the simple vowel sounds and seven days with the syllable made up of the vowel compounded with S.

The Main Work

Daily 5 to 10 minutes. Repeat the indicated exercises of the preliminary work for seven days. After the sixth day move the index finger of your angled hand, after it has been animated by **Sa**, to your nose. If you smell a slight sulphurous odor, you can proceed. If such is not the case, you must exercise for seven days longer.

Daily 10 minutes, 14 days long. The **I** is formed and animated by **Si, Si, Si**. When warmth is felt the hand is dropped and the **A** is formed, animated by the formula **alam**. The hand is moved into the Neck-grip at the neck, constantly repeating the formula. After a while remove the hand sharply. Then the **O** is formed again as before. After 14 days the bitter taste of mercuric chloride will be perceived if the index finger of the angled hand is placed on the tongue.

Daily 10 minutes, 14 days. The student forms the **I**-sign, which he animates with **Si**, then the **A**-sign, which he animates with:

two days **Alam**

two days **alamas**

seven days **alar**

three days **alamar**

After the first four days there will be a perceptible slaty taste when one puts the index finger of the angled hand on the tongue. Then it is time to sharpen one's vision. If the student perceives a black shadow, this part of the work is finished.

Concerning the next phase of work, the table of the Prophet indicates a time-span of 696 days. Depending on the individuals involved, it fluctuates between this maximum term and the minimum of three lunar months. On page 45 I compare the data of the *Rosarius minor* Table with that of the Prophet. No exact time-span can be set, it all depends on obtaining certain the results. When these are obtained, the student goes on, otherwise he repeats the exercise until the indicated color appears. Once the student has glimpsed the blackish shadow, this day is to be celebrated as the beginning of a new life— the student receives his lodge-name.

In the next period of time the Chest- and Middle-grip come into use. The student animates the **I**-sign for a short while and then immediately shifts into **A**, which he animates with the indicated formula. Since he has to report to his teacher everyday what he sees, verification is easy. If the learner attains the color being aimed for early, the other formulas are just left out and he goes on to the next exercise. Once one has animated the **A**-sign it is then incorporated into the body by means of the Chest-grip. The formulas to be practiced during this period of work are:

Alar, Kaha ya as, taha, tasam, tas tasam.

The colors that the student slowly begins to see are: out of the blackish shadow evolves a blue, then a light red that soon fades into a pale green that becomes fresher from day to day. Once the green appears very clearly, this work is finished.

The student changes to the Middle-grip, with which the formulas **alam, yas, sa, cham** come into use. The developing colors show an intricate interplay and finally fade into a yellowish white. By means of the Master-grip and the formulas: **cham, cham asak, ka** this yellowish white is transformed into a brilliant white, which the mystics of the Orient cannot praise enough.

The Pursuant Work. . .

shall turn this white into a magnificent red. The table of the Prophet indicates that the only formula for this is a short **na**. This grip is called the Closing-grip by the Masters because it is used at the end of the whole working session. It is begun to the left of the navel and is then drawn back over the navel. The white fades into a dirty grey, out of which, after a short time, develops into a full red, after having been yellow.

With this the work of the Oriental Mason is finished (the work upon one's self). From a raw, uneven stone he has become a cubical one.

This curriculum is to be uninterrupted. The student may not leave out a single day. Most of the Oriental Masons have only progressed through the lesser work, at the conclusion of which the signs of recognition are communicated.

These consist of certain words and signs. Hand grips are not known to them because Orientals do not greet each other by offering their hands. If one suspects that a gentleman might be "a brother" then one makes the **I**-sign by extending one's index finger horizontally so that the other one sees it: the second one responds by spreading out the thumb of his right hand. It is demonstrated that both have proven themselves to each other when they both form the circle, the **O**.

If you find a candle, a round bowl and an open compass on the table of an oriental man you can be certain that you are in the presence of an initiate.

If an Oriental Mason wants the aid and counsel of a brother in a social situation where he knows no one, he will find a brother if he places his angled right hand nonchalantly over his left shoulder, approximately where the Chest-grip starts. If he is in great distress he will lift the angled hand over his head; often he will also lift both arms up and hold out both hands. It is a duty to rush at once to the aid of a brother who gives this sign.

Another sign of recognition is the so-called Fire-sign, which is made when one wishes to greet a brother from a distance. One holds the left hand stretched out flat, lays the right hand on it, likewise flat, and now moves the right hand quickly and energetically along the back of the left hand.

The so-called Star-sign, which is made in the lodge, is formed with the right hand by holding the two middle fingers together, spreading apart the small and index fingers, with the thumb spread out as well.

The words of recognition are: key, water, fire, level, black, white, red, rose, stone. As will be understood later, these words describe the entire work. Among the Oriental Masons the work is called the Science of the Key: *Ilm el miftach* and the Masons themselves often refer to themselves as *Beni el Mim*— Sons of the Key.

At meetings the oldest *sheikh* presides and a warden, a steward and a runner are appointed. The warden has to ensure that the meeting is conducted undisturbed; the steward takes care of the guests, supervises the servants and at the conclusion of the gathering collects an offering which is divided between the warden and the servants. The runner supports the warden and the steward.

The *sheikh* opens the session with the Fire-sign and the word **alam**, which the *Beni el Mim* actually use to mean: "Let's begin..." After the questions to the warden, the steward and the runner, as to whether everything is in order, the *sheikh* says: "My brothers, we are secure, we

are provided for, and we are served. The Sun is shining, let us open heaven. Brother runner, hast thou the key?"

"Worthy Master, I am the I"

"Brother Warden, hast thou the key?"

"Worthy Master, I am the A."

"Brother Steward, hast thou the key?"

"Worthy Master, I am the O."

"My brothers, without the key there is no knowledge. I am water, fire and level. What are you?"

The warden answers: "We are black, white, red, rose and stone."

Then the Master: "Holy is our science. Let us acknowledge: There is no God but God and Mohammed is the Messenger of God." Now everyone present makes the star-sign on his chest, whereupon the confession of faith is repeated simultaneously by all. Then the presiding member goes on: "God bless him and give him salvation. Here the words of the holy Sura:

"In the name of God the most merciful, the gracious. **Cham osak**. Therefore God the Powerful, the Wise, gives his revelation to you and those who were before you."

It is the 42nd Sura which the Master recites and which he concludes with the words: "True are the words of the Prophet, God bless him and give him salvation. Brother warden, what are the Sun and Moon?"

"*Allah wad din*." That means: "God and soul or also religion and faith." *Din* is ambiguous, and so the question is one of the main questions of the brotherhood.

All those present repeat the answer of the warden and thereby complete the star-sign. The Master goes on:

"To worship God and to make the faith great, is always our effort." All present answer with "**alam**," and now the subject of the evening is entered upon. After the conclusion of the official segment, a convivial meal usually takes place.

The greatest discretion is required of the *Beni el Mim*. However, in order to forestall the idea that the present book is any sort of betrayal, it must be said that it has been written by command of the chiefs of the order. The reason

is as follows: The so-called civilized world has been overcome by a great organization of infidels – monstrous in extent – and religious institutions have already been undermined by this to such a degree that they are not able to mount any unified resistance. In this emergency the Islamic brothers remembered that the tradition says that in earlier times the science was known in Europe. They sought and investigated – and found – in the writings of the Rosicrucians and those of the alchemists that these exemplified the Science of the Key in their books perfectly. The assignment is to make people aware of this and to show seekers the way; the requirements of the times allows any consideration against publication to vanish. May the truth of the process of victory begin and the clouds of darkness slowly, but all the more surely, disperse.

“alam.”

SUMMARY OF THE WORK

Preparation:

Animation of the signs **I, A, O** through the vowels **i, a o**.

Animation of the signs through **Si, Sa, So**.

Main work:

Neck-grip, formulas: **alam, alamas, alar, alamar**.

Chest-grip, formulas: **alar, kaha ya, taha, tasam, tas, tasam**.

Middle-grip, formulas: **alam, yas, sa, cham**.

Stomach-grip, formulas: **cham, cham, asak, ka**.

Pursuant-Work:

Closing-grip: formula: **na**.

II THEORY

So far we have been introduced to the practice of Islamic Freemasonry, now we must present evidence to show that the Science of the Key is actually the preparation of the Philosophers' Stone, the *magnum opus*, the mystery of the Rosicrucians and alchemists.

Whoever is knowledgeable about these writings will recognize the connections with ease, if he is not so stupid as to think that such a recognition is detrimental – that is, the dogma or opinion that one already knows everything. I do not undertake to oppose such an opinion, for that would be a useless beginning. I console myself with a verse I once read somewhere:

The philosopher Pythagoras conceived
A new doctrine, and so he brought —
Since he was, of course, still a heathen —
A thousand sacrificial bulls to the Gods.
Is it now no wonder, if the oxen tremble
As soon as they get wind of a new truth?

What I am revealing here is old, primeval, knowledge. I cannot be credited with having discovered the secret, I am only the means to an end, the tool. And this tool struggled long enough against revealing this secret. It was supposed

to be revealed only to a small circle in my *History of Astrology*; I confess that that was a conceit of mine.

for those who are not familiar with the mode of teaching and symbolism of the Rosicrucians, I will give the necessary explanations. Additionally, there are enough books in the Theosophical Publishing House where more detailed information can be found. It is likewise with the symbols and signs of recognition of the Freemasons. Modern Freemasonry has truly preserved one thing, and that is a great deal of the symbolism still used in the lodges, even though the meaning might have been lost or another external meaning might have been applied. I once presented this years ago in magical writings under the pseudonym Lessing the Younger. (Conversations Ernst and Falk.)

Modern Freemasonry, which since the Constitution of 1717 was developed into worldwide Freemasonry, both *is* and *is not* the continuation of the old Freemasonry of the Middle Ages. It is so as far as outward appearances are concerned, but as it concerns the nature and content of the teaching it has entirely abandoned the ways of ancient Masonry. It has placed itself on a purely humanistic basis and views salvation as a matter of external progress moving from the outside inward. Ancient Masonry views, or rather viewed, its assignment as the ennobling of the individual. It taught a system whereby the individual being had to begin to become better and it hoped that this person would then function like leavening in the mass of the people. This hope was justified as long as there remained a religious unity in the western world. As soon as this unity began to crumble, the powers of the shadow started to win the game and the emerging Enlightenment gradually overwhelmed the old sources completely such that the meanings of the symbols were forgotten.

Modern Masonry has no system of exercises such as ancient Masonry did. The word [Jakin], which is imparted to the apprentice, signifies nothing to him other than it is a sign of recognition of the First Degree— that, however, the two vowels I and A are contained in this word, and that these are the work of the First Degree, has been forgotten.

The column Jachin is the upward pointing index finger, just as still today all minarets around the mosques are compared to index fingers.

The column Boas is the thumb. In the Second Degree the apprentice is to work on the A and the O. He is to go from the point to the line (I), from the line through the compass (A) to a perfect circle (O). This is the meaning of the letter G, which means geometry, of the Second Masonic Degree.

And what does the Third Degree mean to the present-day Mason? He receives the master-word and the master-grip, but he does not know that he has to make this word true by means of the grip, so that out of the discolored ashes the full redness of the rose can be engendered. Only through the black shadow of death can the spirit attain to its complete unfoldment.

It is telling enough that most historians of Freemasonry reject Rosi-crucianism and alchemy as aberrations; but no, it was precisely these which embodied ancient Freemasonry.

If we trace our way back we will find significant connections. In my second volume of *Die Geschichte der Astrologie* I will pursue these connections. It is there that one also finds the basis of the teachings concerning letters and numbers, which I can only touch on here.

We will become familiar with numerous alchemical and Rosicrucian writers in the following presentation. I am concerned with demonstrating from these writings the proof that the exercises of the *Beni el Mim* embody the "Great Work" which the Rosicrucians and alchemists have described as the highest of all. I want to open the way to the understanding of these things so that even the doubter can enter upon it. Doubtless further investigations by men more suitable than I myself am will increase the proofs, but I know that for many this will not be necessary.

It is ancient secret knowledge that everything in the world – that the whole universe – consists of a primeval matter, and that matter as we know it is only an apparent form of this primeval matter. The ancients called this primeval matter aether, and they taught that God, the

ultimate, incomprehensible unity, manifested as spirit and aether. Modern science expresses this by saying that every form of matter is determined by a different vibratory rate of the primeval matter. Even just 20 years ago it was taught that the atom was the smallest thing and was indivisible; today it is taught that in the atom a certain number of electrons circulate around a fixed nucleus. The direction of motion and number of these electrons determine the nature of the matter.*

To know the nature of this primeval matter is conceptually impossible for us, but its first apparent forms are recognizable. These are cosmic forces designated by the ancients as elements: fire, water, air and earth. By means of these the seven forces which play a role in astrology are fixed.

God (Sun) is manifest in the Spirit (Moon) and Matter-Aether (Saturn). Spirit and Matter are manifest in the four cosmic forces: Fire (Mars), Earth (Venus), Air (Mercury), and Water (Jupiter). In astrology a zodiacal sign is ascribed to each of these forces as a diurnal and nocturnal house. The sequence of zodiacal signs as nocturnal houses represent the materialization of spirit, while the sequence of the diurnal houses represent the spiritualization of matter.

Here the goal of human development is presented in this ordering of the zodiacal signs in the simplest and most

**Okkulte Chemie*. Theosophisches Verlagshaus, Leipzig.

conceivable form. Each person must undergo this development, however, the free will of the human being makes it possible to accelerate this development. One way to spiritualize matter is the Science of the Key.

I is the creative principle, the first unity. From the I arises the A, spirit and the O, matter. By means of the three vowels spiritual currents are stimulated. We very frequently find these two signs, I and A, represented in images in ancient Freemasonic literature, and less frequently the O.

Two very good illustrations of the vowels are found in the 1619 Hannover edition of Heinrich Khunrath's *Amphitheatrum Sapientiae Aeternae*. Khunrath was a physician in Dresden. He already secured imperial permission to publish the book from the then mint-master of the elector by the name of Sebottendorf in 1598, although the work did not appear until three years after Khunrath's death. His lodge-brother, Erasmus Wolfart, provided for the publication. The three vowels are found on the first table which shows two crossed torches in the middle: the A, over these is an owl, as a symbol of wisdom. The owl is wearing glasses: the O. To the right and left are two lights, which indicate the I. The inscription below reads:

What's the use of torches, light or glasses

If the people don't want to see?

Khunrath indicates the way in the following words: "Consider why you have come into the world: to learn to know GOD, yourself and the spiritual world." You arrive at this—

I. through prayer in the oratory

II. through work in the laboratory

That is the highest philosophy.

An illustration which shows us how the vowels are represented by the hands is found on another page of the same work.

The fourth table illustrates two wise men in the foreground who are showing the crowd the entrances to art. The wise man to the left is clearly forming an I, the one to the right forms an A with his right hand and an O

with his left. An epigram makes the symbols even more clear; it says: *Capiat et sapiat qui capere et sapere potest, qui non vel taceat vel discat aut abeat aut talis, qualis est, maneat*. "Grasp and use it, whosoever can grasp and use it, whosoever can not do so, to be silent and learn, or remove himself, or remain as he is."

In the holdings of the Munich Staatsbibliothek there is a prayer book of the French Freemason Jacques Coeur, which is especially instructive, and which contains copious illustrations of the three vowels. Franz Boll presented a study of this prayer book in 1902.*

Jacques Coeur was a merchant from Bourges who was often in Damascus, and who perhaps learned the Science of the Key there. He supported the campaign of Joan of Arc, was the advisor of king Charles VII, and died in 1456 on the island of Chios. His two houses in Montpellier and Bourges are famous in the context of cultural history as we find in both a number of Freemasonic emblems and epigrams. The house in Bourges is set off with two towers, one of which portrays an index finger, the other a thumb.

Especially instructive are the hand-positions of the figures in the vestibule of the cathedral in Freiburg. The series is derived from Albertus Magnus who makes us aware of the entire system of ancient Freemasonry by means of descriptions of the same things in his *Mineralium libri quinque*. For example, he describes the form of the A as follows:** *Cassiope est Virgo sedens in Cathedra habens manus erectas et cancellatas*. "Cassiopeia is a Virgin, sitting in an arm-chair with her hands erect and crossed." From the sentences which follow it then becomes clear that the A is only made with the right hand. Much information is made available in the books of Louis Herre concerning the vestibule cycle of sculptures and the Masonic interpretation of the Freiburg cathedral. This literature is easy to obtain.

* *Zeitschrift für Bücherfreunde* Vol. VI:2 (1902).

** *Opera omnia Parisiis*, Vol V (1890), *Lib II Tract III*, Chap. V, page 54.

From the plethora of material I wish to present there are two more examples which are especially instructive; they demonstrate the way in which the wise concealed their wisdom.

In the book: *von dem großen Stein der uralten daran so viel tausend Meister anfangs der Welt hero gemacht haben*,⁽⁶⁾ published for the benefit of the sons of philosophy by Johannes Thölden, Hessen, Zerbst 1602 — the author gives us a clue by means of a riddle from the tractate of the Benedictine Basilius Valentinus (around 1550). It goes like this: For a final departure from here you should, of all things, understand that you should weigh on the heavenly scale— ram, bull, crab, scorpion and mountain-goat. On the other side of the scale, however, you should put the twin, archer, water-bearer, fish and maiden. Then make sure that the gold-rich lion enters the womb of the virgin, so that the balance will be tipped to that side of the scale. Then let the twelve signs of heaven come into opposition with the Pleiades, thus a final conjunction and connection of all the colors of the cosmos will occur so that the greatest will become the least and the least will become the greatest of all.

We write the Latin names of the zodiacal signs in the usual way one under the other and read the final letters:

Libra		Gemini	
Caper	ars	Arcitenens	is
Taurus		Amphora	
Cancer		Pisces	as
Scorpio	ros	Vir-Leo-go	
Aries		Pleiades	os

The solution results in **ars ros is os as**. Art is a tau [= dew] from **is**, **as** or the art of the rose is **is**, **as os**.

We find the second proof in the secret figures of the Rosicrucians, which were reprinted in German translation in Altona in 1785. I do not recall whether it is contained in the reprint issued by Barsdorf (Berlin, 1918), the first part of which is *Aureum seculum redivivum von Henricus*

Madathanus, theosophus, medicus et tandem dei gratia aureae crucis frater.(7) Madathan says: "The number of my name is MDCXI, in which my whole name has been written secretly in the book of nature with 11 dead and 7 living things. Additionally, the fifth letter is the fifth part of the eighth and the fifth part of the twelfth. Let yourself be satisfied with this.

The name HENRICVS MADATHANVS consists of eleven consonants and seven vowels. If the letters which can also stand for Roman numerals are read the date 1611 results.(8) The fifth letter is I, the eighth S, the twelfth A.

If we write the S in an angular manner thus  then I is the fifth part of S and the fifth part of A, which with its cross-bar actually consists of five parts. So Madathan also gives us the two vowels *i* and *a* and the consonant S – is and as – as guideposts.

The Masonic neck-grip is found very frequently in old sculptures; a reproduction is given by Guido von List in his *Bilderschrift der Ario-Germanen*, besides this there is also Louis Herre in his books on the Freiburg cathedral.

In alchemistic literature this neck-grip is referred to as the seal of Hermes, or merely as the Seal, or the Bath of Mary. The Venetian physician Laurentius Ventura writes:* *Stude ergo ad inveniendum hoc sigillum secretum: quia sine illo magisterium perfici non potest, et hoc est duplex modus: primus per torturam colli*, that is: "...therefore concern yourself with finding this secret seal, because without that mastery cannot be attained. And there is a doubled method of practice: the first is by means of encircling(9) the neck."

On the seventh page of the previously mentioned work by Basilius Valentinus we find a man who is holding a scale in his left hand, and the right hand encompasses a bottle with the neck-grip. The level of importance the translator Thölde places on this drawing can be seen in his polemic which he directed at a greedy reprinter of his

**De Lapide Philosophorum* ch. XVII printed in the *Theatrum Chemicum*, Strassburg.

book, who had incorrectly reproduced the drawings. The distorted drawings are also found in the Strassburg editions of 1645 and 1666.

Concerning the Seal, or the Bath of Mary – the expression comes from the Alexandrian alchemist, Maria phrophetissa – Arnold of Villanova writes:* *item nota, quod ignis primi gradus qui pertinet solum ad putrefactionem, solutionem, mortificationem corporis, dicitur per quandam similitudinem balneum, quia balneum est res temperata, non intensa in calore nec etiam rigida sed calore remisso* – "Likewise notice that the degree of the first fire, which only extends to the putrefaction, dissolution and mortification of the body, is said to be the result of a certain bath of similarity, because the bath is a moderate thing, neither harsh in its warmth, nor cold, but rather relaxed in its warmth."

Before I go on to a discussion of the work itself, I want to quote yet another passage, which I take from a book of a now unknown author. It is the *Liber de Magni Lapidis Compositione et Operatione*. The small work is made up of 56 short chapters and is found in the collection of Freemasonic writings which the Italian physician Guilielmus Gratrolus of Bergamo compiled and published in Basel in 1561. The title of this collection is *Verae Alchemiae Metallicae Doctrina Certusque Modus*.

Cap. XXXV *Primum opus: Elixir ubique reperiri*

*Item de vera compositione Elixiris, quod est primus opus, dicitur a philosophis quod illa res quae est vera, ubique reperitur, quia in quodlibet homine est et apudquemlibet hominem reperitur: et Adam secum apportavit eam de Paradiso et cum mortuus fuit, ipsam secum reportavit et com ea sepultus fuit: Et pro tanto dicit sapientum Allegoria, quod ist res est
sol subtiliatus*

* *De Decoctione Lapidis Philosophorum*.

is est arum subtiliatum et conversum in virtute maxima minerali: unde dicitur in libro de hoc auro, ex gumma nostra et pauco auro multa emimus. Sed secundum Albertum in libro de Mineralibus dicitur et probatur, quod aurum ubiqueest et reperitur, quia non est aliqua res ex quatuor elementis elementata, in qua non inveniatur aurum in ultima affinatione naturaliter. Et quia idem Albertus dicit ibidem et probat, quod maxima virtus mineralis est in quodlibet homine et maxime in capite inter dentes ita quod in sepulchris antiquorum mortuorum inter dentes aurum in granis minutis et oblongis suerius inventum est in suo tempore, ut ipse dicit, quod esse non posset, nisi in homine esset ista virtus mineralis, quae virtus mineralis est in Elixiri nostro praedicto, vel composito. Et pro tanto dicitur quod hic lapis est in quodlibet homine et quod, Adam, etc. His visis et intellectis ad propositum redeamus.

In the future I will not provide the Latin texts, but will limit myself to their translations.

Chapt. 35 First Work: The Elixir is to be found everywhere.

Likewise the philosophers tell of the composition of the elixir, which is the first work, that is that thing, which is right and found everywhere, because it is in every person and is found with every person. Adam took it with him from paradise, he bore it back when he died and he was buried with it. For this reason the allegory of the wise says that this thing is the rarified Sun, that is rarified gold brought to the highest power of the mineral: Therefore, it is said in a book about this gold: we buy much from our gum and from little gold. According to Albertus, in a book about minerals, it is said, and proven, that gold is present and can be found everywhere, because there is nothing made of the four elements which does not quite naturally

contain gold in the most extreme purity. Therefore, he also says that it is found everywhere. The same Albertus says and proves right there that the greatest mineral power is in every person and mainly in the head between the teeth, so that in his time gold was found in the graves of long-dead persons between their teeth on the surface in fine elongated kernels, which, as he says, would not be possible if that mineral-power were not in the person, a power which is also in the Elixir or composition we mentioned. For this reason it is said that this stone is in every person, and that Adam, etc. After we have seen and understood this, we will return to our subject.

We shouldn't think badly of a modern person if he shakes his head over such utterances and puts this book aside. It is meant even less for the curious— it will confuse him as well as the superficial individual. The old philosopher quotes an old book: the allegory of the wise, and wishes thereby to convey that the expression "gold" is to be understood according to the way the wise understood it. he quotes Albertus, but incorrectly in fact. Whoever does not take the trouble to read closely will go down the wrong path.

The gold between the teeth is the word out of which, according to the Gospel of John, everything was created. The kernels of gold (syllables) are *minutis* and *oblongis*—"pointed" and "broad lengthwise." **I** and **A** which animate the body (gum), the little gold that is necessary is the rarified solar power.

Artefius teaches us in his *Clavis Majoris Sapientiae* the art "*facere descendere spiritum*"⁽¹⁰⁾ and provides the following forms in which the spirit willingly overflows. **I V X O** through **L**. Here we have the **I** and the **O**; **V** and **X** are two forms of the **A**, the so-called point which comes about when the thumb is not spread in a right-angle and the breadth which is the right angle.

The **L** means a level and a square.

We find very significant pictures in the treatise of the Italian physician Ianus Lacinius from Calabria: *Metallorum*

in melius mutationem Typus Methodusque (Venice, 1546). The first illustration shows a king, who draws attention to his extended index finger— it is the beginning of the royal art. Another work is appended to this tractate, which is also very instructive: *Pretiosa mararita novella* by Petrus Bonus Ferrariensis.

Even more important for us is the short work left behind by the unfortunate Seton, and which Sendivogius published. Orthelius annotated this piece of writing: *Novum Lumen Chemicum*. Here there are twelve figures which clearly show where the way leads.

Before I go on, it should be mentioned that Seton was an adept seduced by vanity who wanted to make use of his wisdom to manufacture gold from ignoble metals. He was arrested by the Saxon Elector, Christian II, and cruelly tortured without ever betraying his secret. Sendivog freed him from prison, but unfortunately too late, as he died three months later— after he had shared out the elixir to his wife and Sendivog. Sendivogius married his widow and so came into possession of the entirety of the elixir. Afterward he passed himself off as an adept without, however, being able to produce the elixir himself. Whoever has diligently followed my discussion will already have understood that the production of the stone is only possible for someone who has mastered the Science of the Key. This science is, however – at least according to the notions of the world – so childish that Seton would prefer to have himself tortured and killed rather than surrender it. He wouldn't have been believed. At the conclusion I will give an example where this is made clear. If you are interested in the special field of the alchemists of the art of making gold, I recommend to you the book by Schmieder, *Geschichte der Alchemie* (Halle, 1832). You will derive much information from it.

We find Orthelius' commentary in volume VI of the *Theatrum Chemicum* (Strassburg, 1661). This edition corresponds completely to the book I am referring to: *Novum Lumen Chymicum Michaelis Sendivogii Polni XII Figuris in Germania reperitis illustratum*, 1624.

The first figure shows the following: From the upper left a well masked hand is extended toward the bottom right. The thumb is indicated by a small elongated cloud over the top of the third hill. Only the index finger is clearly shown, the other fingers can not be seen. There is an old saying of the Rosicrucians, which I will translate: "Whoever is not equipped with the golden rod for fishing has to take common quicksilver." By "the golden rod" they mean the angled hand— the A. By the expression "he has to take common quicksilver" they mean to say that he should keep his hands off.

Another drawing shows us a chemical laboratory with a furnace. The drawing is surrounded by 20 circles, of these seven are shown on the lengthwise sides, and three are shown on the above and below. On the furnace there is a large diagram that should be commented upon. In the middle of the diagram a flask is shown with a small vertical mark— an I. Next to the furnace at the bottom is a small grate, the cover of a vent for ashes or air. The grate-work has 24 fields— the 24 letters. Concerning this Orthelius provides the commentary that the I is to be connected to a finger.

I wish to explain a few more of the diagrams because the diagrams of Seton are important to me precisely because the art of this adept is doubtless solid and because a man who is irreproachable in all things, Surya, could not derive anything from the *Novum Lumen Chymicum*, otherwise he would have made some comment on Schmieder's assertion.

Surya writes in volume XI of the collection *Okkulte Medizin*: "Setonius left behind only a single alchemical treatise in Latin under the title *Cosmopolitae Novum Lum chymicum*. It concerns the stone of the wise in twelve chapters, which the author may have associated in his mind with the twelve gates of Ripey. That no disclosure concerning the secret is to be expected from this work is made absolutely clear by the previously quoted oral remarks of the author. One who betrays nothing in the heat of disputation or under torture will certainly be even more circumspect at his writing desk. This treatise was

published after his death by Sendivogius and appeared in different editions.

Seton knew the time had not yet come, and he paid for this knowledge with his life. In his work he clearly set down the science for those who possess the key. But the cursed hunger for gold made them all go astray.

We know that the Sun represents God and the Moon represents the spirit, and the soul as well, since the soul and the spirit are the same thing: the soul is the immortal spirit which struggles back toward its primeval source. The medieval Latin alphabet of 20 letters had four vowels: A E I O. The U was expressed by V. In addition there were 16 consonants. Based on this scholastic division the vowel A was often expressed by the number 17. Now we see on the left side of the illustration a two-handled wash-tub with soil in it, on the right side the soil has disappeared and there appears something akin to the finger-tips of a hand. In the sky above shine the Moon and the Sun. The Moon is surrounded by 17 stars, of which 16 are quite clearly shown, while the 17th is indicated more faintly. Here the letters are ascribed to the first emanation of God. It should also be indicated that these letters are to be spoken aloud. The Sun shows that the letters are to be fulfilled by means of divine spirit. As the accompanying text emphasizes, this only concerns the 17th letter, the A. The explanation is the following: The soil in the wash-tub on the left is the *Terra Adamica*, the human being. The left segment of the figure is meant to indicate that the human being is the object of alchemy. The right segment provides us with the actual means for the work— the letter A, the spirit and the hand. The Moon and the stars, illuminated by the Sun in the sky in the upper part of the segment on the right, symbolize the spiritually animated letter A. The hand stretches itself down toward the A, ready to grasp it. The text belonging to this figure says: "The aforementioned spiritual water is taken up and both waters are blended in a single vessel and put outside under a clear, starry sky. Then the celestial rays are mixed with them. When, however, rain falls you can operate. The longer it is set out, the better it is."

The two waters are the spoken and the spiritually animated A. They are connected to each other in a single vessel, that is the angled hand, and put outside— that is, the hand is stretched out so that it can draw spiritual water out of the aether. The expression "under a clear, starry sky" is supposed to indicate the aether. When the hand is extended in this way so as to animate the A in it, aetherical rays are mixed with the animated hand and they flow forth into it like rain. Once the hand is sufficiently saturated with this spiritual water, one proceeds on to the operation— the neck-grip.

The water is defined as "our heavenly water which does not wet our hands, not normal water, yet almost like rainwater."

I wish to describe one last figure. We see on this one an alchemist who is holding the *tragula aurea*, the golden javelin, in his left hand with which he is pointing to a wash-tub. The tub is empty, whereby it is indicated that this has nothing to do with actual water. His right hand is making a grasping gesture. On the chair stands a smaller vessel with water, and if one carefully examines this vessel a small hand can be seen to have been drawn in.

With this I believe I have fulfilled my assignment of providing proof that the secret of the alchemists is hidden in the vowels connected to signs and grips. I will therefore conclude that, as I will quote other masters later on, with the words which the much misunderstood Freemason of Basel, Leonhardt Thurneisser, directed toward his readers as a conclusion. In 1586 Thurneisser forged a union of Reformed and Lutheran lodges into one great league. The *Fama* of 1614 acknowledges him as the father of the Rosicrucians and also mentions his two dictionaries along with the writings of Paracelsus. These dictionaries were only known in lodge-circles and probably only survive in a few copies. One bears the title: *Hermeneia, das ist ein Onomasticum Interpretatio oder erklerunge Leonhardt Thurneyssers zum Thurm über die frebden vnd vnbekannten Wörter in den schriften Theophrasti Peracelsi*.⁽¹¹⁾ It is 95 pages long and was printed in Berlin in 1574. The last two pages contain a rhymed poem to the

reader as a conclusion to the work. In this Thurneisser represents the viewpoint that Freemasonic practices will lead to better and higher knowledge than going to the greatest universities. Our hand-grips, he says, reveal the truth to us much better and more clearly than any book. Also all obscure writings will become clear by these means, and whatever we do not understand in Paracelsus will be easily understood when we connect the question to a hand-grip. We inquire with the chest-grip and god provides the answer in our hearts. The concluding words read:

Viel Kunst sind geschrieben, wenig wahr
 Handgriff zeigt die Prob, Labor machts klar.
 Praxis bewährt ding, die geschriben sind.
 Handgriff all Kunst, so durch arbeidt sind.
 Der handgriff ist ein Instrument
 Durch das 's Gemüt all sein Anschlag endt.
 Die Natur dem Gemüt sein bgird ersatt
 Wem handgriff s Werk verrichtet hat.
 Doch geschieht der keins ohn handgriff nit
 Der Einfluß wirkt unsichtbar mit
 Derhalb was ich nicht lesen kann
 Das greif ich mit den henden an
 Und hab Gott lob mit ausgericht
 Was hundert tun mit lesen nicht
 Drum mich Neids schwetzen nit an ficht.

III THEORY AND PRACTICE

In what has already been written I have provided proof that the system of the Rosicrucians and alchemists can only be understood when signs, grips and words are used. We are now going to go through the whole system in light of the Science of the Key. Please allow me to give a few additional examples of proof from Rosicrucian writings here. The system according to which Westerners work is not completely perfect, as the Middle-grip, the Closing-grip and a series of the formulas were not known to the west. All systems which were exercised, however, dovetail into the system of the *Beni el Mim* without contradiction.

The wish, and the hope, of those who assigned me the task of writing this book is that a great number of individuals will want to undertake these exercises, thus building an unbreakable chain which is the best defence against all the powers of the shadow. To avoid any misunderstandings, I would like to stress that I reject the formation of any lodge, and I request also that I not be bothered by letters. I will not answer, as those who know me from my astrological writings can attest. What I have to say is so clear that a child can grasp it. Whoever can't understand it can not be helped. It is written: "Seek and ye shall find," but this does not mean that everything should be handed out on a silver platter.

The exercises can harm no one. But one condition must be met—they can not be interrupted. Missing one day will cause a setback of weeks and calls the whole endeavor into question. And the most important thing is the prayer—the prayer for admission.

The exercises, especially in the beginning, should not be overdone, otherwise a few complaints might arise. These would not be dangerous, but they would be uncomfortable. I will provide further explanations of these. You should practice when you are alone and undisturbed. Anyone can sequester himself ten minutes a day for this. You should keep quiet about your exercises and only speak about them, once your goal is met, to someone you recognize as an equal brother—for then it is easy.

“What mode of life must I maintain?” I hear people ask. I would like to answer this as well. Whoever studies the lives of the alchemists and Rosicrucians will find that they were married and that they lived as every other person lived. True wisdom automatically avoids any excess. The Oriental generally lives modestly. A sheep is only slaughtered on festival days, otherwise he consumes milk, cheese, bread and fruit. This is perhaps not possible in the colder latitudes, but the consumption of meat should be limited in a reasonable way. Alcohol in every form is forbidden to the Muslim. Now a glass of wine or beer when you are in a happy mood won't hurt anything, but distilled liquors are strenuously warned against. Whoever gets to the end of the exercises will know precisely what is to be given up.

It is best to undertake the exercises early in the morning right after rising—they will not take any more than ten minutes a day. During the day, when you are alone, you can do a short repetition, and in the evening as well.

I will not give a prescription concerning this prayer. Each individual will have to settle that for himself. Whosoever asks, to him shall be given—according to the measure he has. Whoever understands this idea correctly knows what is meant by it. We read that finer forces can be attracted by the index finger held vertically

and by thinking of the letter **I**. The body of the ordinary human is an inert mass, which, left to itself will become increasingly more material. In order to be able to absorb the spiritual water a breach must first be opened and the matter has to be stimulated. This happens by means of the letter **I**, by which the element of fire is stimulated. As I discussed in *Geschichte der Astrologie* (vol. I) **I** is the *is*-rune, which is associated with Mars (fire); the rune *ar* or *as* belongs to Jupiter (water) and the othal-rune to Mercury (air).

In order to animate the **I** correctly one places one's self in an erect position so that the whole body is given the form of the **I**. One stretches one's arm straight up to the sky and makes a fist. Then the index finger is extended upward. It should rise up next to the closed fist like a slender minaret beside the dome of a mosque, as sheikh Jachya remarks in his small book *Charam el din*. By thinking the vowel **I** the finger is animated. Some old instructions say: Take the philosophical steel (Chalyb's index finger) and strike the *scintilla* (sparks). Then take the second steel (the thumb) and put the magnet (the **A**-sign) into action, which attracts the elements and conducts to you the water for which you thirst.

It will soon be found that the finger will start to become warm, and then by an act of will, this current can be conducted throughout the whole body, as can the current stimulated by the **A**. This can be done without injury, but care should be taken not to influence the head—it must remain free, otherwise a dangerous state of intoxication could ensue. During the gradual course of the work the current would automatically make its way into the head, we consciously block entrance to the head by means of the neck-grip. If we form the **A**-sign and animate it, we will first take in spiritual fire, but also some of the spiritual element of earth, which can be noticed by a certain dryness at the base of the thumb. If the angled hand has been sufficiently prepared it will begin to absorb the spiritual water.

We supply spiritual air to the solar plexus by means of the O-sign. Here I would like to mention an experiment which my teacher conducted. He ordered a student to form the A and to think of the O. After a while he cried out: "O, sheikh, look, it's impossible, they are warping automatically." "My son, Mehemed Rafi said, "you see that it is impossible to mix up the signs and the words. You can only think of the A in the A-sign and not the O, if you think of O, your fingers will automatically try to close up. You see that the signs are not chosen arbitrarily, but rather lie founded in nature. It is our assignment in life to seek the spirit, but we always work in harmony with nature. You also see, however, my son, that spirit acts acutely in our bodies as it forms the body according to its image. It is not only the I, the A and the O which animate the body, all vowels and consonants have this ability. The I-spirit provides the breadth, dignity, and resilience, the O-spirit imparts life and movement."

It was at the beginning of my study when I heard these words which sheikh Mehemed Rafi spoke to the Baktashidervish, whom he was introducing to the *Ilm el miftach*, I was very impressed—no astrologer could have defined the effects of the planetary forces more simply.

Approximately ten days are necessary for the preparatory work. Nothing will be harmed if the simple vowels and syllables are exercised longer—development will take place faster that way. When the preparation is over, transition is made into the main work, which is the actual chemical process. In the preparatory work the spirit is held in the fetters of matter and is stimulated, or as the alchemists express it, the materials are made ready, the soil, the earth is tilled, in order to be able to receive the seed. By means of the limited spiritual animation of the finger, aether is absorbed and conducted to the body. The manifestations we observe are: the body breaths really freely, and the body seems to become lighter.

As we go further in the work we will become aware that an increasing warmth is developing in the index finger. Because of its form, this pointed member attracts more of

the fire element—which should also be brought about by means of the vowel i. Finally the warmth becomes so strong that fire flames forth from the point of the finger and creates a sulphurous acidity with the air which we can clearly perceive when we hold our finger to our nose. Most old writings remark first of all on the preparation of the sulfur. Flamel writes about this: At last I found what I was looking for, which I recognized at once by its strong smell. When I had that, I easily perfected my mastery.*

This sulfurous smell is the first milestone on the path. Only he who perceives it can go further. He will then have the experience of a current flowing into the angled hand, a flow that the ancients very pointedly compared to water. This is the water of life our folktales are so enthusiastic about, the *aqua vitae* of the alchemists. With the sulfurous smell the dissolution has begun, the *putrefactio* of alchemy. The ancient writings, in agreement with oriental texts, fix a minimal length of 40 days in which a certain result must be obtained. A few other Freemasonic texts declare, however, that it would take 70 or even 90 days to complete the first degree.

The *petrefactio*, or decay, comes to an end when the disciple of the art glimpses a blackish shadow, the raven's head of the alchemists.

During this time we are conducting the water of life into the body by means of the neck-grip. This water has the characteristic of dissolving and disintegrating anything course. Hand in hand with this disintegrating effect goes another one which builds things up. The finer forces in the person are conditioned in such a way that they can be awakened. Ancient Freemasons very often compared the birth of the spiritual man to physical birth. The blackish shadow the disciple sees with his spiritual eye is the evolving spiritual man. Now with the application of the neck-grip, the one the ancients called the *Balneum Mariae*, care should be given to making this sign precisely. "Cut

*Albert Poisson, *Nikolas Flamel: Sa vie, ses fondations, ses oeuvres, suivi de la réimpression du livre des figures*. Paris (1893), p. 173.

off the neck of the beast," says an old text. The grip should not be overdone, however, so that a slow annealing results. It can happen, and the ancient Freemasons describe this process often, that the fire element breaks out and anneals the vertebra. If this occurs do not be afraid, just bow your head and wait for the affliction to be over—the terrible flame will go out after a few minutes. If you are prepared for the manifestation you have nothing to fear. As a rule, however, this annealing occurs slowly and gradually without being noticed. If the flame breaks out, it is as if a terrible demon is grabbing the person by the scruff of the neck and taking him down to the ground.

After approximately two weeks of this exercise no one will be able to doubt any longer that the neck-grip has caused chemical changes in the neck. Now the time has come when the poisonous taste of mercury is perceived on the tongue when the tongue is touched with the index finger of the angled hand. Then later the taste of salt is developed. About this Seton says: "Therefore, the fire began to affect the air and generated sulfur. For its part the air began to affect the water and generated quicksilver, also the water began to affect the earth and generated salt." This process is described and concealed by alchemists in the most manifold ways. I do not wish to speak about the basis of the usage of the consonants, and why the vowels work in this way, that would lead us astray and make this book too bulky. If you want to be informed on this further, see my *Geschichte der Astrologie*. So the formulas should be understood as they are intended: means to develop the spiritual body.

When our spiritual eye glimpses the blackish shadow the purification is concluded, and now the main point becomes the unfolding of the evolving spiritual body—a work that takes varying lengths of time. The neck grip, or the Bath of Mary, only works from the lower stratum out of which the spiritual person, free of the fetters of the body, should lift himself. The earthly body must be mortified so that the spiritual body can rise up. Here a note needs to be added. This mortification has been much misunderstood. It was believed that the body had to be killed by means of

asceticism and withdrawal from the world. This is naturally only one possible path if the pilgrim has also completed a whole change in consciousness. Without this a false mortification ensues. Asceticism and withdrawal from the world leads, in most cases, to a dissolution in which the pilgrim becomes easy prey for every type of evil influence. More than a few black magicians have in this way become the victims of the Prince of the Shadow.

True mortification lies in sublimation, in unification, in the *unio mystica*, in becoming one with God. The unification begins with the change in consciousness wherein the mortification of the small ego is completed and the resurrection of the divine ego takes place. That is, however, the goal we wish to achieve—which we must and can achieve.

Once we have arrived at the end of our exercise we will feel that our earthly bodies are becoming more and more strange, we are growing beyond it, we clearly feel it has become dust and ashes. This is the deepest point which is reached when we are surrounded by the terrors of darkness and death. For this reason the ancient Freemasons only took courageous men into their community, and the tests the candidate had to undergo were very severe. Courage and perseverance were the most noble virtues he had to have.

Our work is aimed at anticipating and overcoming death. Usually the human soul parts from its body only upon death. We do not want such a conclusion to our lives. We want to undergo a voluntary death in the middle of our lives. The weakling will be terrified by the boldness of our undertaking. We can only conquer nature by means of nature—the lower by means of the higher, spiritual nature. We remain strictly in conformity with the spiritual/natural universe.

A person of little faith could accuse me of tempting God, of lacking necessary humility, which he voluntarily submits to in the natural course of affairs, as we are used to it. I answer him by saying that I am pointing to a path of life which lies in the essence of every true religion and that this way is also clearly recognizable in the New

Testament. Most modern people, unfortunately, have not read the holy scriptures of their religion. Those who have followed me to this point, but who now recoil, are advised to read no further—for what I bring is not milk for the weak, but food for the strong.

All religions teach the sevenfold constitution of the body. Precise knowledge can best be obtained on this by studying the Rosicrucian lessons of Heindel, I can only offer a brief sketch here. The designations are of archaic origin, the translations render the approximate meanings:

The Immortal Part	1. Atma, the self, god in us	Sun
	2. Buddhi, the heavenly soul	Moon
	3. Buddhi-Manas, reason, causal body	Mercury
The Mortal Part	4. Kama-Manas, intellect	Venus
	5. Kama-body (astral body), desire	Mars
	6. Prana, life-force (aetheric-body- Linga-Bhuta	Jupiter
	7. Sthula-Bhuta, body	Saturn

Apparently this table of correspondences is at variance with the version generally used in Theosophy. However, those who have worked intensively with planetary forces will recognize that this difference is not an essential one. With the addition of Uranus and Neptune these two higher octaves of Mercury and Venus are assigned to a second principle—but here we are not looking at the more developed person, rather we are only concerned with one who is just beginning to evolve. Saturn stands there at the threshold, it is assigned to the Kama-Manas, for us it is the representative of the most dense form of matter.

The last quadrad is called “the animal in us” by Paracelsus. The Science of the Key gives us the way to conquer this animal in us and to ascend to the causal plane. This is all the more necessary as the powers of darkness are already working to make a noose out of the

person who is making such progress. I can only allude to things here, but some will understand what I mean.

Many of our brothers have advanced so far that they have ascended from stage seven to the sixth stage and they are in a position to project the fluid-body, whose vessel is the life-force, thus splitting themselves in two. The phenomenon of the double (*Doppelgänger*) can be traced back to this ability—as can many other spiritualistic phenomena and occult experiences. Now during the projection of the fluid body this body remains connected to the earthly body by means of a cord. However, this connection is very loose. This is the point of attack where the powers of the shadow will strike, where they must strike.

For this reason it is most important that the possibility of leaving the plane of effects to gaze upon the causal plane is provided—this is what my teachers desire. Every danger looses its terror as soon as it is understood. But we will not cease our work. We press forward through death toward true life. The body will also appear to us as dust and ashes when we are finished with the work of the neck-grip. Thus the writings of the ancient Freemasons warn us: *cinerem ne vilipendas*.⁽¹²⁾ We regard the ashes, the body, with great care, for we need it for the construction of the new, spiritual body. It is not enough that we have developed the shadow of the spiritual body—we must give it color, form and thus an independent life.

After Death — Life

For the development of the spiritual body we employ the other grips and in addition use the formulas of the Prophet. Before I go on I would like to quote a passage from the previously cited Flamel: “And truly, I say to you once more, even if you work with the correct materials, if, at the beginning, after you have put the mixtures into the philosophical egg — that is a while after the fire has acted upon it — you do not see this raven’s head, this deep-black blackness, you must start all over again.” The philosophical egg is the body, the mixtures are the fine mixtures of the elements which we conducted to the body

by means of the neck-grip. Therefore, it is of the greatest importance that this shadow is seen. If it appears, you are on the right track. This raven's head is mentioned by all alchemists and writers, and the colors which start to appear are correspondingly described by all. The main colors are: black, white, red. Between white and red there are a number of other colors— especially a citrine color. The spiritual body is developed in these colors, the natural order of which can be disturbed by a fire that is too strong — or as we like to express it — by an excessive frequency in the use of the chest-grip. This grip should not be made more than five times a day. Even if the old texts say “Boil, boil unceasingly,” they mean by this that one should not lose patience. Here I will collate the table of *Rosarius minor* and the table of the Prophet so that the apprentice will have reference points for the time periods for the exercises. But first the translation of this old text that demonstrates the process of the work most clearly.

And this alone I reveal: Through such a regime you will have completed the Purification in 124 days. Blackness is, however, the recognized sign of Purification. Furthermore, you will, by means of the aforesaid regime, have a second sign, which will be a redness that abides for 30 days and develops completely in these days. The third sign is, however, a green that is completed in 70 days by means of warmth. Between the third and fourth signs all colors that can be conceived of will appear. Then the marriage will be consummated— the union and blending of spirit and soul, for then the two will rule together, while previously each ruled for itself under its own sign. Actually in the first sign the body ruled, in the second the spirit and in the third the soul. The time of blending will be completed during a regularly increasing regime of 70 days. Now the fourth sign will appear, which is the profitable Azymation— 140 days will go by and then the sign of whiteness will be seen.

Work	<i>Rosarius Minor</i>	Table of the Prophet
Preparation	14 days	46 days
Neck-grip	124 "	58 "
Chest-grip	100 "	149 "
Middle-grip	70 "	236 "
Master-grip	140 "	311 "
Closing-grip	28 "	68 "
Days	476	868
Lunar months	17	31

It can be seen that the differences are considerable, and they are even greater in reality, because it depends entirely upon the talent of the individual— what one accomplishes in a week will take another a month, or several months. There are disciples graced by god who have completed the path in three months.

Ancient Freemasons called the chest-grip the “cooking.” While the neck-grip develops a gentle warmth, the chest-grip causes the unfolding of a powerful fire. With this grip the following will be experienced: After the angled hand is animated by the formula, the spiritual water is absorbed, a fist is made and the thumb of the closed hand is placed upon the left side of the chest. Now the hand is angled and opened and the chest-grip is done and drawn off. The colors that show themselves during this operation develop from a light blue, through red to green. This red was called by the alchemists the false red, the false redness in contrast to the purple color during the closing work. If they saw the green they would cry: “*O benedicta viriditas.*”⁽¹³⁾

As melted gold appears to have a green shimmer, the opinion of people who see the alchemical process as the art of making gold was once more led astray by this. The joyous cry had nothing to do with gold, but rather the

Freemason was happy to have glimpsed the sign that proved to him that he was on the right-path.

The green color becomes fresher day by day, and when it has become like the green of a meadow in spring this part of the work can be broken off and the rest of the work continued with.

You are now to make the transition to the Middle-grip with its corresponding formulas. The procedure is the same as with the chest-grip. The colors which develop present a true symphony of colors. Blue, yellow, red are represented in every shade. The ancients characterized this play of color as a peacock's tail. By and by the colors fade and by the end of the work a yellowish white remains.

The grip should not be done more than five times a day. It is better to do it only three times, as too much can endanger the whole work. It should be repeated that it is impossible to speed things up with more intensive work.

Patience is desirable at work
A quiet spirit is busy for years,
Only time makes the fine bevel strong.

At this point I would like to discuss the *chakras* briefly. The word comes from Sanskrit and means "wheel" (*chakram*, plural *chakrani*). Jung Stilling characterizes them as small flames because they are in constant flaming motion. The ancient Freemasons called them by the names of the seven planets. If they used this terminology for other things as well this only seems to be a contradiction. As I indicated for the constitution of mankind, so too can individual constitutions be accordingly designated by the planets. Their relationship to each other is described by Abbot Johannes Tritheim.* In the texts we usually find the following schema, which is inscribed in concentric circles. I am representing it in another form, because I wish to avoid symbols.

* *Tractatus chemicus* in volume IV of the *Theatrum chemicum*.

Saturn.	Pineal gland
Jupiter.	Forehead
Mars.	Thyroid
Sun.	Heart
Venus.	Pit of the stomach
Mercury.	Navel
Moon.	Sexual parts

The Sun is in the middle of the concentric circles. Saturn above, the Moon below.

These *chakras*, or little flames, are nothing other than the organs of the spiritual body. The Benedictine Basilius Valentinus speaks of them in the following words: "the king wandered through six cities in the heavenly firmament, but in the seventh he beheld his seat." Here too the investigations of Staudenmayer should be mentioned. In his book, *Die Magie als experimentale Wissenschaft*, he proves that various nerve bundles can be specially stimulated and special effects produced. We conduct spiritual forces to these easily stimulated places and thus build the spiritual body.

Once the yellowish white is obtained, you transform this into a brilliant white by means of the master-grip and the correct formulas.

I close with the words of Heinrich Khunrath: "With my own eyes I saw the gold— not the common kind but that of the philosophers— with my hands I touched it, with my tongue I tasted it, with my nose I smelled it. How wondrous is God in his works."

IV Conclusion

I have said everything that is to be said. We must only further discuss the pronunciation of the Arabic words. They are to be pronounced as they are written, the transcription is very precise. The S is pronounced like a Z, as is the Z also. So one does not say *natzim* but rather *nazim*. With words of more than one syllable the emphasis is on the second syllable, **alam** – **alám**. The CH is a guttural which may cause some difficulties. It is harder than the ch in German *ach*, and tends more toward the k-sound.

In Arabic the Science of the Key is also called the Science of the Scale: *Ilm el Nazan*. One also finds *Ilm el Quimiya*, the Science of Chemistry. This is extremely ancient material. Around 900 AD we find it in Venice, where the cornerstone of Freemasonry was laid when the Science assimilated the Syrian legend of Hiram Abif and linked the individual grades to the construction of the Temple of Solomon— and thus the Science became a monopoly of the lodge.

The ancient Freemasons never thought of looking at it like that, as by that time the alchemistic books were too widely disseminated. They placed great weight on secrecy, however, because it was feared that by giving up the secret they would expose themselves to the mockery of the people. Now people can mock!

From an old treatise of the Austrian Freemason Lampspring, who lived around the middle of the 14th century, these words are given, which I had promised:

If you understand me right and well
Then you will be free of error,
Nothing is more important than this one thing,
In which everything else is concealed.
Therefore, do not turn your mind away.
Cooking, time and patience are necessary,
If you wish to pick the most noble fruit.
Time and work should not displease you
For seed and metal may only be cooked constantly and moderately,
From day to day, and perhaps all week long,
Then you will, in this unpretentious thing,
Find and perfect the whole work of philosophy,
Which certainly appears impossible to most men,
Because it concerns such a simple and easy work—
If we showed and made it known to others
Certainly we would be mocked by men, women and children
So be discreet and silent
Then you will live in peace and be without trouble
Not only with your neighbor, but also with God
Who gives the art and wishes to know it secretly.

Alchemy is traced back to Hermes Trismegistus— one of his sayings is given in conclusion, and with it the explanation that a modern researcher gives:

“If you do not take the corporeal condition from bodies, and if you do not reformulate the non-corporeal substances into bodies, you will not obtain what you expect.” If you have read this book to its conclusion you will know what is meant by this— and how Berthelot was mistaken when he explained: “If one does not remove the metallic condition from metals and if one does not extract metals from non-metallic materials, the transmutation of metals will not succeed.”

Also Available from Rûna-Raven Press

***Green Rûna* (2nd revised edition) Edred Thorsson**

Anthology of shorter works written by Edred Thorsson for various Asatru/Odinist and Rune-Gild publications from the late 1970s to the early 1980s. Contains material never before available to the general public on matters of runelore and Germanic religion. Includes a biography of the most Mysterious Man in Troth by James A. Chisholm.

\$12.95

***The Invincible* Guido List**

A facsimile edition of the 1898 "Germanic catechism" by the man who would become the leader of an esoteric Germanic revival just a few years later. It is an outline of a moral teaching with which few could disagree. This edition is beautifully illustrated by Timothy Weinmeister whose work closely follows the art-nouveau style of the original. Translation is by Edred Thorsson.

\$10.00

***Johan Bure and the Adalruna* Stephen E. Flowers**

The first extensive treatment of the esoteric runology of Johan Bure, the 17th century runologist and rune-mystic of Sweden to appear in English. This includes a biography of Bure and a systematic presentation of his ideas on esoteric runology, called by him: "Adalruna."

\$10.00

***Lords of the Left-Hand Path* Stephen E. Flowers**

This is a huge compendium study of Left-Hand Path individuals and groups from ancient times to modern movements such as the Church of Satan and the Temple of Set— both of which have individual chapters in the book. Ancient paths include the Egyptian cult of Set, Hinduism, Buddhism, Zoroastrianism, the Yezidis, Neoplatonists and the Greeks, the Germanics, the Slavs, the Assassins, Dualist sects, the Faustian path, the Hellfire Club, de Sade, Marx and the sinister aspects of Bolshevism. A whole chapter is devoted to Hitler and Himmler and the occult practices of Nazism. Other modern individuals analyzed include Blavatsky, Gurdjieff, Crowley, Spare, Gregorius and Gerald Gardner.

\$36.00

***Rune-Magic* Siegfried Adolf Kummer**

A new English translation and edition of a classic text of the *Armanen* tradition originally published in German in 1933. It contains original material on runic chants ("yodels"), hand postures, invocations and more. With an introduction and textual notes by Edred Thorsson.

\$9.95

To order send the price of the book plus \$3.00 for the first book and \$0.50 for each additional title to: Rûna-Raven, P.O. Box 557, Smithville, Texas 78957 USA
